What the offensives of the last two months on the Eastern and Western fronts have added to these approximate totals can only be conjectured. Tables similar to these have often been published; but they need digestion and reflection, if we are to form any useful judgment on problems of policy as distinct from those of military and naval strategy, which are beyond our scope.

Clearly after the war the Governments of all the belligerent States will have to find, if they can, a very large new revenue for the purpose of paying the interest on their new war debt and pensions to invalid soldiers or to the widows and children of those who have been killed in the war. And most of them will have to meet these charges from a diminished trade and revenue. Thus they will be compelled either to repudiate interest on their debt—which means the confiscation of the property of their own subjects — or to compound with their creditors, or to make very heavy additions to a scale of taxation which had already become oppressive before the war, or finally they will have to abandon by mutual consent the system of competitive armaments and be content for a long time to come with a smaller outlay on armies and navies. The last of these methods alone offers a tolerable prospect for Europe in the long years of depression that lie ahead.

years, to provide money for the war. But the average man does not think in millions, or perceive the meaning for the future of this vast accumulating debt. Nor does he quite see the position as regards our Allies. Russia, especially, in order to pay interest on its debt and keep going, will need to obtain very large supplies of capital after the war. Where will she get the money? The longer the war lasts the more will be required. At least 500 millions must be owed to France. The French will have to try to pay the interest on the capital lent by them to Russia for some years to come. We shall have to do the same for what we have lent. We may have to do the same for Italy and Belgium, certainly for Serbia. Our Colonies will need all the financial support we can give them. After the war Colonial loans will shower on the London market, and Mr. Hughes will be very angry if money is not plentiful and rates are not cheap. For our own purposes it is clear that we shall need twice as much revenue as we had before the war, besides large temporary loans during the period of demobilisation and reconstruction.

In addition to these debt charges the belligerent States for many years will have a heavy drain on their resources in the payment of pensions to disabled soldiers and to the dependents of those who have lost their lives. From the example of the United States in the Civil War, we can dimly guess to what sums this item will advance in a war of unprecedented extent and destructiveness. While the claims for such pensions multiply with every week of war, in each country the resources from which they must be paid are absorbed by immediate military needs. It must be remembered that among the belligerents Great Britain alone has made any attempt to meet even a fraction of the war charges by increased taxation. The other Powers have had to face a heavy loss of revenue and to pay their way by issues of depreciated currency, by loans, and by heavy borrowings from their State banks.

Take first the financial position of the Central Powers, as it has been estimated by careful neutral investigators. The figures, of course, are very rough; but they are sufficiently near the mark for our purpose:

NATIONAL DEBTS OF THE CENTRAL POWERS.
(In Millions Sterling.)

	Before the War.	Jan. 1, 1916.	Aug. 1, 1916.
Germany (Imperial debt)	250	1,620	2,450
Austria-Hungary	750	—	1,800

DEBT CHARGES.
(In Millions Sterling.)

	Before the War.	Aug. 1, 1916.
Germany	12	122
Austria-Hungary	32	100

In both these States the revenue (largely derived from customs) has shrunk to a fraction of the normal receipts. It is hard to see how, except by very heavy borrowing for very many years to come, they will be able to discharge even the interest on their debts. In his Budget speech of last March, Dr. Helfferich did not disguise the burden even then resting on the German people. "The service of from the suppression of the vodka traffic must be taken into account, though the latter is more than compensated by increased health, energy, and savings.

THE NATIONAL DEBTS OF THE ALLIES.
(In Millions Sterling.)

	Before the War.	Jan. 1, 1916.	Aug. 1, 1916.
France	1,320	2,520	2,920
Great Britain	707	2,125	2,610
Italy	570	760	920
Russia	920	2,220	3,000

Thus Germany and Great Britain lead in the addition of new war debt to their liabilities, while Russia and France have the largest gross debts. But in these totals neither the public debts of the German States nor those of our Colonies and India are included. If the German State debts were added Germany would take first place. Here is another rough computation of the debt charges of the Allies, leaving out Japan, Belgium, Serbia, and Roumania:

THE DEBT CHARGES OF THE ALLIES.
(In Millions Sterling.)

	Before the War.	Jan. 1, 1916.	Aug. 1, 1916.
Great Britain	22*	86	110
France	53	100	125
Russia	45	108	145
Italy	17	26	33

* Including a sinking fund of about five millions.

With Dr. Helfferich's statement quoted above may be contrasted the reminder of Mr. McKenna, in his Budget statement a month later, that "we never borrow a pound without making provision in advance by new taxation sufficient to cover both interest and a liberal sinking fund." He added: "The ability and willingness of our people to bear the burden of taxation have established our national credit on an unshakable foundation. . . . Civic courage is as important in its sphere as military courage, and we may justly claim in this time of stress that we have not been found wanting in either of these great virtues." If Germany has shown courage and financial strength by raising less revenue from taxation since the war began than she did in time of peace, then courage is not the word for what Great Britain has done. In the financial year 1916-17 it is proposed to raise 300 millions sterling by new taxation. Nevertheless, our debt charge (including a big Sinking Fund) for the current year (£145,000,000) is equal to our total national expenditure a few years ago.

In this survey no attempt has been made to consider the financial position of Bulgaria and Turkey in one group of belligerents, nor of Belgium, Serbia, and Montenegro among our Allies. The two Balkan Wars had already reduced their participants to insolvency, but we have good hope that Belgium will recover more rapidly than some suppose.

No one who can realise what these figures mean to the European world in individual privation and in the diversion of resources from productive and beneficial expenditure will attempt to minimise them. But the financial loss is only one aspect of the real cost of the war. There is also the devastation and destruction of property in the invaded areas of Northern France, Belgium, East Prussia, Poland, Galicia, the Balkans, intercourse or the direct action of the belligerents in interference with neutral trade. Lastly, the casualty lists, with their agonising toll of human pain and bereavement, from another aspect, record a heavy economic loss to each belligerent. Both the numerical and the economic loss by casualties to the belligerents cannot, in the nature of things, be shown by more than rough estimates. But after two years of hostilities the total losses of the five leading belligerents in men may perhaps work out somewhat as follows; and a second column gives a valuation based upon the supposition that a British soldier represents a loss of £600, a German and a Frenchman a loss of £500, an Austrian a loss of £400, and a Russian a loss of £300 to the community of which he is a member.

KILLED, DIED OF DISEASE, OR MAIMED.

	The numerical loss.	Economic loss.
British Empire	450,000	£270,000,000
France	1,200,000	600,000,000
Germany	1,750,000	875,000,000
Austria	1,000,000	400,000,000
Russia	1,800,000	540,000,000
	6,200,000	£2,685,000,000

What the offensives of the last two months on the Eastern and Western fronts have added to these approximate totals can only be conjectured. Tables similar to these have often been published; but they need digestion and reflection, if we are to form any useful judgment on problems of policy as distinct from those of military and naval strategy, which are beyond our scope.

Clearly after the war the Governments of all the belligerent States will have to find, if they can, a very large new revenue for the purpose of paying the interest on their new war debt and pensions to invalid soldiers or to the widows and children of those who have been killed in the war. And most of them will have to meet these charges from a diminished trade and revenue. Thus they will be compelled either to repudiate interest on their debt—which means the confiscation of the property of their own subjects — or to compound with their creditors, or to make very heavy additions to a scale of taxation which had already become oppressive before the war, or finally they will have to abandon by mutual consent the system of competitive armaments and be content for a long time to come with a smaller outlay on armies and navies. The last of these methods alone offers a tolerable prospect for Europe in the long years of depression that lie ahead.

LABOUR ADVISER.

Co-operation Between Industry and the Government.

The new Government Department under the control of Mr. Arthur Henderson, M.P., the Labour Adviser to the Cabinet, is now in full operation at the offices in Great George-street, Westminster.

One of the Labour Adviser's first undertakings was to lay the foundations for a regular and definite system of co-operation and communication between industry and the Government. With that object consultative committees of employers and trade unionists have already been appointed, with a separate Consultative Committee on Women's Labour. Other committees will deal with Colonial and international problems affecting labour, and with general social and economic questions.

These committees will, it is hoped, perform a very useful function. Where it is necessary to consult any industry or branch of industry from either the employers' or workmen's standpoint the representatives of the industry will be approached, and full opportunity will be given to them to submit any considerations which appear to them material to the question at issue and important from their point of view.

Mr. Henderson will be glad to receive from employers or workpeople information as to any important point of principle to which they desire that consideration should be given.

AFTER THE WAR.

PROBLEM OF A BETTER SOCIAL SYSTEM.

WOMEN IN INDUSTRY.

A discussion on social and industrial reconstruction after the war took place at the annual meeting of the Manchester Women's War Interests Committee in the Minor Hall, Manchester, last night.

Mr. A. A. Purcell presided, and the financial statement and the annual report were presented respectively by Mrs. Salis Simon and Mr. G. K. Grierson. The report recorded the activities of the Committee in collecting information about conditions and wages in women's [illegible] work, preventing unfair cutting of men's [illegible]ndard rates, and securing a fair minimum wage for the new women workers.

Mr. A. E. Zimmern, who spoke on the ideals and principles of reconstruction, said [illegible]hat it was necessary to take a long view, [illegible]d not merely to think of the pressing problem [illegible]f the moment. It was impossible to go back [illegible] the old conditions, because the whole fram[illegible] work of industry had been altered. The real pr[illegible]lem was to build up a new and better social [illegible]tem, but if employers and workers were to be [illegible] the same mind and spirit as before the w[illegible] the prospect was hopeless. To secure this [illegible]tter social system large measures of educatio[illegible] reform were necessary, and the elementary [illegible]ool must be reorganised. The teaching profe[illegible]ion must be honoured more, and the eleme[illegible]ary teacher must have more freedom. There [illegible]ust be a real system of part-time secondary e[illegible]cation from the ages of 14 to 18, and more [illegible]ust be done to improve the physique of the chi[illegible]en and create for them the corporate life which sc[illegible] deeply influenced students at the public sche[illegible]ls and universities. In order to counteract [illegible]e influence of the sensational press a wide ext[illegible]sion of activity on the lines of the Workers' Educational Association was needed. Only by this means could the experiment of democracy be made a success. The Government did not desire to evade its pledge to restore the workshop rules and customs which had been abrogated during the war, but the Labour movement was asked to think out an alternative policy.

Mr. Zimmern considered that it was vital to continue the new association of men and women in industry, and the question for men was not how to get women out of the industries but the terms upon which they were to stay.

Women and the Trade Union Instinct.

Mr. Joseph Hallsworth said that the great difficulty was to create in the mind of women and girl workers a desire to organise and strive [illegible]

WORK AFTER THE WAR.

CHILDREN AS A FACTOR IN THE PROBLEM.

By A. W. HUMPHREY.

When the war is over and the armies disband the problem will be how so to readjust things that the jobs will, if not outnumber, at least be equivalent to the number of workers in the labour market. Clearly, there are two ways by which this end may be brought about. We may, on the one hand, increase the number of jobs by the organisation of special schemes of employment; and, on the other hand, we may take steps to eliminate from the labour market certain workers who, unless such steps are taken, will be in that market competing for such work as is available. It is with the second of these two courses that this article is concerned.

The workers who may be usefully taken out of the labour market are the children. To remove them would be doubly to benefit the nation. Clear out of wage-earning occupations all children up to 15 or 16 years of age, and not only would the congestion of the labour market at the close of the war be greatly relieved, but, at the same time, a step would have been taken towards the rearing of a generation sounder in mind and body than its forbears, and generally equipped in a manner more worthy of a great nation. Such would be the effect of raising the school age, and now is the time of times to press for this long-overdue reform.

School Age.

It is a lamentable fact that the full-time leaving age has not been raised during the last forty years. During that period the only advance made was the raising of the half-time age from ten to eleven years by the Act of 1893, and from eleven to twelve years by the Act of 1899. The exact position of the children to-day cannot be stated concisely. It is regulated by Education Acts, Factory Acts, and Mines Acts, and varies from place to place according to the by-laws of local authorities. The essential facts, however, are these. At twelve years of age, or eleven in rural districts, children may obtain permission to attend school half-time only; at thirteen they may cease all attendance if they have passed a certain standard or put in a certain number of attendances; and at fourteen they may cease all attendance unconditionally and the State no longer insists upon their being educated in any shape or way. They are then finished products of our educational system.

Attempts to improve upon this state of things have been made from time to time, but without success. In 1909 an Interdepartmental Committee recommended that half-time should be abolished, and that no child should leave school at thirteen years of age unless to take up training in a suitable trade. The same year the Consultative Committee on Continuation Schools to the Board of Education recommended that the minimum age for any exemption from school attendance should be raised to fourteen, the change to be made more gradually in agricultural districts. But nothing was done. In 1908 Mr. (now Sir) Chiozza Money introduced a Bill for the raising of the age to fourteen, with compulsory attendance at continuation schools, in the day-time, until seventeen. Neither then, nor when he introduced the Bill again in 1911, did the measure reach the Statute Book. In 1914 the Hon. R. D. Denman brought in a Bill to make thirteen the minimum age for any cessation of attendance at school, and to give local authorities the power to raise the age to fifteen; but the Bill was "talked out." Much, however, has happened since those days, and it may now reasonably be hoped that the nation will see how doubly imperative it is that the school age should be raised.

Child Wage Earners.

Now, what is the number of children who, at the close of the war, will be filling [illegible] and competing for places in the industrial world, at a time when we are faced with the problem of providing [illegible]

how to get women out of the industries but the terms upon which they were to stay.

Women and the Trade Union Instinct.

Mr. Joseph Hallsworth said that the great difficulty was to create in the mind of women and girl workers a desire to organise and strive for better industrial and social conditions. Until that was done it was not likely that much progress would be made in reconstruction after the war. Very few trade unions were really grappling with the task of obtaining full and accurate information about the numbers and status of the new women workers. In his view there was little evidence of the existence of a changed spirit in industry. The object of employers was still to secure the cheapest labour they could, and it was necessary that men and women workers should organise in the same unions to maintain fair standards of wages.

The Chairman said that his experience led him to believe that in some respects antagonism in industry would be greater than ever was, judging from the present attitude of many employers, and it was a notable fact that men and women wer on strike at the present time because employers declined to carry out arbitration awards. Trade unionists were so engrossed in trying to push up wages that they had no time to consider reconstruction problems. In his opinion they were doing right to increase wages to the highest possible point, because employers made no secret of the fact that they were only waiting for the opportunity to depress conditions.

Miss Margaret Ashton pointed out that the introduction of new machinery and the subdivision of processes had destroyed the old standards of wages in many industries. Employers did not hesitate to alter machines slightly in order to evade the obligation to pay women the same piece rates as men, and if they did this in the time of the nation's emergency what hope was there after the war unless a new spirit was created? Would it not be possible, she asked, to devise a system, to be put into operation after the war, under which women who did not desire long hours could work half-time at piece rates which would be the same for men and women? This would promote the health of women, prevent the lowering of men's standards, and ease competition if there was a glut of labour after demobilisation. It was urgently necessary that schemes of this kind should be worked out before the end of the war, and that men's trade unions should undertake the organisation of women's labour.

Child Wage Earners.

Now, what is the number of children who, at the close of the war, will be filling places and competing for places in the industrial world at a time when we are faced with the problem of providing employment for something like 3,000,000 disbanded soldiers and an even greater number of "war-workers" whom the peace will disorganise and deprive of their jobs? At the time of the census of 1911 there were employed in England and Wales 222,800 boys aged fourteen and 278,300 boys aged 15, and the employed girls of the same ages numbered respectively 133,200 and 193,300, a total for both sexes of 827,600. To these must be added the half-timers, of whom the late Mr. Frederic Keeling estimated that there were, in 1912, 34,535 employed under the Factory Acts and 9,372 outside the Factory Acts, these children being aged from eleven to thirteen. In addition, there is a relatively small number of children employed under the Mines Acts, and the 60,000 children whom Sir George Newman states have been taken from school earlier than would otherwise have been the case on account of the war.

We may thus estimate that there are well over 900,000 children of fifteen years of age and under in wage-earning employment, and to this total would be added another 528,400 if the children of sixteen were included. Clearly, then, by lengthening the school life of the child, the labour market could be eased to a very considerable extent. The full effect of such a step would not, of course, be felt at once; but, on the other hand, the employment problem following the war will not be of short duration. Long before we have done with it we should realise the full benefit of raising the age from the point of view of mitigating the glut of labour.

Spare Time Work.

It is, of course, essential that a raising of the age should be accompanied by a strict and stringent regulation of the employment of children out of school hours; that is, before and after putting in a full day's attendance at school. Unless this is done, the effect of extended education from the standpoint of raising physical, mental, and moral standards would be largely nullified. The permissive character of past legislation on the subject has, in a great measure, rendered the law futile. The Employment of Children Act of 1903 gave to local authorities wide powers to deal with this evil, but up to 1913 only about 98 out of 329 had made bylaws to restrict it; and to-day hundreds of thousands of children of seven years of age and upwards work before and after school, often for as many as 20 or 30 hours per week, and in some cases up to 40 or 50 hours.

But the fact must be faced that, in the great bulk of cases, the wages of the children are an economic necessity to the parents. Any raising of the school age will have to be accompanied by a system of maintenance grants. The principle of such grants is already recognised, for they are made to secondary school scholars; and as for the cost, there will not in the future be much force in the time-worn query, "Where's the money coming from?"

WILL WOMEN GIVE UP THEIR WORK?

QUESTIONS TO BE FACED WHEN THE MEN COME BACK.

What will be the position of women when the soldiers come home? When the men of the new armies are released in their thousands and come back to their old places, will the women contentedly relinquish the life they have learned to appreciate and enjoy, and will their employers be just as glad to release those who in many cases may be working a little cheaper than the men who occupied the same positions before the great call came?

This question, which will affect nearly every household in the kingdom, is surely one that deserves every attention now in order to save the possibility of trouble when demobilisation begins.

The idea that women will march out in a body when the disbanded men march in is more fantastic than real. Who shall deny women the right to engage in any profession or occupation after the war? Women in the past have been stay-at-homes, but the war has changed all that. The position of women is not the same now as it was in the Victorian era, or even ten years ago, and to-day it is complicated by reason of the fact that women as a class are by no means mentally inferior to men, and have indeed proved extremely successful in practically all the spheres of work they have invaded.

TESTED FITNESS.

Every office, shop, and workshop bears witness of women's fitness in commercial life. These women, many of whom had never left home previous to the war, are quite capable of enduring long hours of exacting and irritating labour. There is the case of certain provision shops where, to my knowledge, the girls work twelve or fourteen hours a day regularly, and even put in overtime during the busy season.

Women have probably achieved their greatest success, however, in those professions where mental skill is demanded, and physical exertion reduced to a minimum, but even in trades where the exercise of physical effort is predominant and mental action is practically nil, women have proved their ability to work side by side with and in the place of men.

One can quite understand those who are working from purely patriotic motives giving back their positions to the men who have been fighting to protect them from any repetition of the horrors of Belgium, but there are many who, having tasted of the joys of freedom, will not like being cased up between four walls again, with very little pocket money and a life of continual domestic drudgery to look forward to.

Then again, take the case of a woman in a good position who married her husband before he went across the sea, and whose partner returns incapacitated for life. It would become necessary for the wife to take her husband's place as the bread-winner of the family, and she would keep her position—as a childless wife. But that is another question which will demand careful consideration. The calm acceptance by women of their share in industrial life is likely to—and has already—undermined millions of marriages. What then becomes of the cry for more babies? If the State calls for more the State must first make the necessary arrangements for pensions sufficient for its disabled warriors to live on. It would be grossly unfair to expect the soldier's wife to go out and earn sufficient to supplement a meagre allowance, and at the same time be making efforts to bring up a young family. Children who "come up somehow" are not likely to make the kind of citizens a nation wants. Reduction and limitation

QUICKER OUTPUT.

WOMEN'S RECORD AS WAR WORKERS.

(By a Special Correspondent.)

It takes two to make a bargain, and both must keep it if any material benefit can possibly arise out of it.

The past and present troubles between the employer and the employed are mainly due to the over-riding of existing agreements and the supplanting of others. It is understood that the parties to an agreement are fully cognisant of the meaning of the various clauses which are drafted to safeguard the interests of both parties; otherwise they would not attach their signatures for the purpose of completion.

At the moment protestations rage furiously. For the most part a spirit of goodwill is supreme, with here and there a threat of strife if one of the parties to industrial concord should fail to "play the game." What is meant by "the game" is as well known in industry as in cricket, but the rules are not as strictly (unfortunately) observed. The teams do not seem to be under the same amount of control as those which take the field.

For instance: several Labour leaders have been indulging, and very properly, in heart to heart talks with employers of labour. One of their number has laid it down as something which goes without saying, that one of the conditions in after-war employment and the removal of restrictions on output shall be the safeguarding of the men's position as regards rates, etc. This is a point which needs no begging; it is a natural progression in the order of change.

QUESTION OF RESTRICTION.

But there is a point which needs pressing, and that is the present position of labour and this self-same question of restriction.

We have it on the authority of several of the largest employers of labour and by official figures, that not only in shipbuilding and engineering but also in the mining industry, the output during this time of this great national crisis, inclusive of overtime, is per man approximately the same as in peace time. On the other hand, it has been found that where women are employed their output is greater in ratio with the men.

Is it not necessary, therefore, and would not material good arise if such men as Mr. G. H. Roberts, Mr. John Hodge, and Mr. Stephen Walsh and other progressive Labour members of Parliament would visit their constituents in the areas where, officially, restrictions are supposedly set on one side for the war period at least, if not for ever?

To hug illusions is an unprofitable business under any condition; no unit can afford to indulge in such an embrace for long and yet survive; therefore, let us who are striving or seeking after a real solution face facts as they are and abstain from applauding promises.

LOOKING FORWARD.

The months roll on, and it is full time that the innumerable committees tabled their plans dealing with our industrial future. Taking into account the efforts of our competitors, there should be an abundance of work for skilled and unskilled labour when peace and consequent demobilisation are accomplished facts.

And, turning for a moment to the effect of this newly returned factor to skilled industry, may it not well be that those who have striven in Flanders, France, and the East for us, will largely solve the question of unrestricted and increased output? The men who have fought and bled, in many cases, in the fight against the Hun and his lust for world dominion, will not rest even on their honourable laurels of war, but desire to carry on in a bloodless manner the trade war of peace. They will receive every encouragement from employers throughout the length and breadth of the land to secure unrestricted earnings for unrestricted output.

Meantime, let the Labour leaders secure for these self-same soldiers the larger and quicker output which the Munitions of War Acts provide, under safeguards which peace time could not make more stringent should anyone attempt their breaking. When this has been done we can move on to the business of after war workshop regulations. Let us first eat the bread provided ere we pass to the baking of the next batch.

ance, and at the same time be making efforts to bring up a young family. Children who "come up somehow" are not likely to make the kind of citizens a nation wants. Reduction and limitation of the family will assuredly follow any system of meagre pensions or any cheapening of the labour market.

LABOUR'S VALUE

The entry of women into the labour market is likely to do much in the way of reducing the labour value of the male, and competition between the cheap female (who is paid on the basis of the support of one) and the dearer male (who is paid on the basis of the support of a family) will grow more bitter. Enmity between men and women as competitive workers existed before the war. It will exist afterwards, and is likely to be a source of trouble. Antagonism between the workers has been accentuated by large numbers of women who have worked to get money for the present only, and without a clear object in view, thus rather unfairly competing with men who have the future welfare of themselves and their families to provide for.

The British manufacturers, possibly aided by a small tariff on imported goods, will undoubtedly compete with each other in their efforts to secure the pre-war trade of the Germans, and they will of necessity introduce new machinery which will make the work easier and simpler by requiring only a single action on the part of the worker. The single action machine is one where one person, the "layer-on" or "taker-off," lays on or takes off for ever. Wages is always the heaviest item in a firm's expenditure, and the manufacturers, after having introduced their "single action" machines, will seek female labour because it is cheap, though in normal times few employers would prefer women to men if the wages paid were the same in both cases.

HOME AGAIN.

The solution may be simpler than it seems at present. Many women who are now paid high wages because of the scarcity of labour will, in the inevitable adjustment, find that their labour value has fallen considerably. They will go home again to find that home life, tinged with the experiences and pleasant recollections of the business world, has gained much in attraction. Instead of grumbling at the "four walls," they will be glad of the relaxation afforded after their strenuous times, and their tennis clubs and other activities will seem far more pleasant than ever they did before.

Husbands and fathers coming home in the evening will find a new helpmate full of animation, and one who is able to discuss present-day affairs with a perfect understanding, and when the returned warriors recount the stories of their adventures the womenfolk will also have many tales to te of their business achievements and associates.

702/7

THE PROBLEM OF THE WOMAN IN THE MAN'S JOB.

"Should Employers Be Forced to Reinstate Soldiers?" Discussed by Labour Experts.

Over three-quarters of a million of women have directly replaced men in industry since the war began, and a hundred thousand additional women have been engaged, making altogether about three and a quarter million workers in the main occupations of the United Kingdom.

In a year's time these numbers will be enormously greater, and no recent event shows more plainly what an abundance of woman-power is still available than the fact that when Mr. Stoll's music-hall musicians struck for higher pay, some 2,000 women were ready to take their places.

When the demobilisation of the Army begins the men will have every right to be given work, and the position of these women workers, many of whom are working for lower wages, will be one of the most difficult problems of after-the-war.

Italy has already dealt with the problem by the issue of a Royal Decree compelling employers to take back after the war the men who have been called to the colours, and Switzerland under its conscription law makes a similar provision.

Should an Act be also passed by the British Parliament compelling employers to reinstate their workmen after the war?

Below are the answers of prominent men and women labour leaders to whom *The Weekly Dispatch* put this question:

MR. J. R. CLYNES, M.P.

"The length of the war has pushed many things beyond the provisions in the first Munitions of War Act, which require employers to give priority of employment to returned soldiers when readjusting staffs of workmen after the war.

"Priority should be extended to a certainty, and either the State or the employers, or both together, should be made responsible for security of work after the war for men who during the war gave security to their country.

"Whatever it may cost, this is one of the accounts which honour requires the country to pay."

MR. ROBERT TOOTILL, M.P.

"The question of reinstatement of workmen after the war is one that ought to attract the attention of those who are seriously anxious to deal sensibly with after-war problems.

The honourable and truly patriotic employers of labour will carry out the Government's obligations and pledges without resort to Acts of Parliament to compel them.

"There is a danger of those employers who are a constant menace to the principle of recognised standard wages making use of a glutted labour market to decline their reinstatement undertakings, their object invariably being cheaper non-union labour.

"Rather than compel employers by Act of Parliament to reinstate workmen who are now serving the colours, when they return after the war I would much prefer to trust to the employers' honour and good will to do full justice to their former employees.

"If you pass Acts of Parliament to compel employers to reinstate you must be consistent and fair by also compelling workmen to be reinstated."

MR. WILL THORNE, M.P.

"I would have no objection to voting for a measure framed to secure the re-employment of workers now on war service.

"Under the Treasury Agreement, which was come to between trade union representatives and Mr. Lloyd George and other Government officials, a definite promise was given by the Government that all trade union rules and customs abandoned during the war period would by pressure of law be restored at the end of the war. This agreement applies chiefly to engineering and shipbuilding establishments, which are two of the staple trades of the country, and may reasonably be expected to remain in at least a normal state at the termination of hostilities.

"I do not anticipate any difficulty in the trades mentioned for soldiers getting back to their old employment, but it is doubtful whether employers in every industry can by Act of Parliament be compelled to re-employ the old workmen, because in the economic upheaval which has taken place and in the disturbances which may yet occur it is impossible to foresee exactly what the position of many industries and business undertakings will be in the future."

MR. WALTER HUDSON, M.P.

"This is a matter that can be, and should be, settled between the employers on the one side and the men's organisations on the other, as there are many important points which would never be satisfactorily woven into an Act of Parliament.

"The return of men unbroken by the war is the most simple part of reinstatement in their former employment. There is the other needful and more difficult side of dealing with the partially incapacitated, that only those who have an interest in each side of the question can understand—What is the most suitable work for such men and the remuneration they should receive?

"In a number of industrial circles this matter is already having attention between the employers and the workmen's representatives."

MR. J. H. THOMAS, M.P.

"Most emphatically—yes.

"The least we can do for those fighting our battle is to guarantee them employment on their return.

"So far as railwaymen are concerned, although upwards of 100,000 have enlisted—and unfortunately many have already paid the great sacrifice—we have an agreement which ensures not only the return to their employment, but, moreover, that their position shall not be prejudiced as a result of them having done their duty."

MISS MARGARET BONDFIELD, National Federation of Women Workers.

"Pledges as to men being taken back by their employers have already been given, and can be found in the Treasury reports, and we are planning to protect the women workers' interests and are arranging very full reports of their work.

"Discharged soldiers are given a month's full pay and a maintenance allowance until they are placed in some position; therefore the women taken from industry should also be given a month's pay and a maintenance allowance until they find other work."

MRS. PEMBER REEVES, Author of "Round About £1 a Week."

"Women must not keep the places of those men who have gone to the front.

"It would be most unfair for a man to return to find a woman had filled his position and was perhaps getting less pay than he did, thus reducing wages.

"The great thing is to keep up the rate of payment."

MRS. DESPARD.

"The whole question of labour after the war is going to be a serious one, and the women who have taken men's positions do not provide the most serious phase of it.

"I cannot see that an Act compelling employers to take back their men would be necessary. Great numbers of men will never want to return to their old positions, and great numbers also will be unable to do so. I am afraid there will be a wave of emigration. The free, broad life of the Colonies on ranches and farms will appeal as never before.

"Those women who do have to give up their positions will have to be provided for until they can get other work. They are war workers and must be treated as such.

"I sincerely hope wages will not have been reduced by the influx of women workers. The great mistake the working men made was in not admitting women to the trades unions when they began as war workers. Then they would not have been able to accept lower wages through ignorance.

"Of course, many of the war workers are married women who have taken their husbands' places or are only working to keep their little homes together till the men return. These women will be very glad to go back to home life again."

WOMAN—AFTER THE WAR.

Mrs. Fawcett Talks like a Real Optimist.

"I SEE no reason for any anxiety as to woman's position in the industrial market after the war," said Mrs. Fawcett, the president of the National Union of Women's Suffrage Societies, when I went to see her the other day.

"I am more optimistic about women in the labour world, indeed about the whole woman's movement, than I have ever been. The women have come into industry to stay. There will be more openings for them in the great reconstruction process which will follow the present cataclysm, and they have already had the chance of proving what they can do.

"Why should there be any question of forcing employers to take men back into their positions when they return from the front? Of course they can take them back if they want them and the men wish to return, and naturally women in those positions would make no attempt to keep them. But many of the men will be unable to come back, others will prefer some new form of work, and still others will want new lives in newer countries.

"TOO VALUABLE TO LOSE."

"And for those women who have been turned out of their positions there will be numberless opportunities. A shipbuilder who now employs many women said recently that when his men come back the women must give up their present posts, but added that others must be found for them. They were too valuable to lose.

"The same feeling exists in the engineering works in Scotland where only women are employed. And, by the way, a new engineering factory has been established at West Hartlepool where women are to be trained. It used to be the favourite anti-suffrage argument that a woman could not adjust and take care of certain delicate parts of a machine without asking a man to help her. She had never been trained to do so then.

"Everywhere I go, and I have been in the North several times in the last few months, I find a most amicable spirit existing between men and women workers. If there really is any resentful feeling among the working men that women should have gone so far within the last two years, I have not encountered it—and, as far as I can see, they have done all they could to help them, admitted them to their trade unions in some cases, and encouraged them to form trade unions of their own.

"I take an optimistic view of the whole labour situation after the war. There will be so many new developments for industrial activity. I cannot believe in the 'slump' that many predict.

"When the war began I felt the suffrage must be laid aside. It seemed to me we must sacrifice that for the country as men were sacrificing all they had to give, but now I know that it has not been sacrificed. More than ever, by supreme service, we have made our claim.

VOTES—AFTER THE WAR?

"Yes, it would be an excellent thing if all suffrage societies could unite after the war. A step towards that is the new consultative committee of constitutional suffrage societies. Seventeen have joined so far, the conditions being that they are working only for suffrage and that they have more than 100 members.

"The militant societies, as such, naturally are not included, because they wished to cut themselves off from us some years ago; but we have Suffragists who were militant at one time and now belong to other societies, and at our recent conference we included the Y.W.C.A. and British Women's League, because they are working for women's interests, though not for the suffrage.

"The consultative committee keeps in touch with certain M.P.s and works constantly for the furtherance of interest in the suffrage.

"There are very few active anti-Suffragists now, it seems to me. All the old bitterness and antagonism have almost disappeared. Time and again recently on the platform I have been with speakers who said that two years ago they had been against the suffrage but that now their arguments had been swept away.

"I used to fear," added Mrs. Fawcett, with a smile, as she handed me a little book, "that I might not live to add the last and most important chapters to this history of the suffrage movement, but now I believe and hope that I may be able to begin work upon them before very long, and I have made many notes and annotations for a new and fuller edition with the work of the last two years added, and then the great and final victory."

WOMEN IN INDUSTRY IN WAR TIME.

POST-WAR PROBLEM.

"There is a hope for a permanent raising of women's industrial position and a close approach to equality in the direction of the nation's affairs." In these words Mr J. E. Highton, Glasgow, summed up a review of the part women had taken in industry during war time, which he presented to the Aberdeen Workers' Educational Association at Marischal College last night. There had been, he said, a large increase of women employed. Most of the increase was in work that was normally men's. Out of the increase of, roughly, 1,000,000, no fewer than 866,000 were replacing men. Those women were engaged mainly upon work which was unskilled and semi-skilled—the best in munitions and engineering work doing what might otherwise have been done by "a handy man." From the point of view of the employer so far, the women taking the man's place was inferior to man. Women's earnings, on the whole, were higher than prior to the war, but were still much lower than men's. In munitions work where their pay was fairly high, it was largely due to artificial restrictions which had af[illegible] other trades, caused a shortage in them, and to some extent increased wages. The conditions under which they were working were, on the whole, better than those for men. They did not stand r[illegible]ht work so well, and on the question of the [illegible] upon their health, the evidence was incon[illegible] The sources from which the women had [illegible] drawn were the normal reserve, which alw[illegible] existed, of women capable of doing industr[illegible] work. There had been large transfers from low-paid to well-paid trades and occupations. Many, single and married, came from the homes. They were told that the leisured classes had given their time to the country in this matter. So far as he had been able to ascertain, there was practically no truth in it. Those transfers had taken place within narrow geographical limits, which would simplify the post-war readjustment. In the latter, while women and employers would loyally make room for the men, the depression which must follow in due course would, unless arrangements had been made before it, give rise to keen competition. Mr A. Hall Wilson presided.

WOMEN IN INDUSTRY.

AFTER THE WAR PROBLEMS.

Under the auspices of the Birmingham Workers' Educational Association, Dr. Marion Phillips, of the Women's Labour League, delivered an interesting lecture at the University last night, on "Women in Industry." She said the increase in the number of women in employment due to the war was still considerably less than one million. The increase of women workers in industrial processes and in commerce was something like 800,000, but that was not a net estimate, because it included women transferred from other groups of employment. The wages of women had been raised to a higher level than before, but owing to the continued rise in the cost of living the wages were still behind a living wage. After the war a very critical period would arise because of the men returning to their employment, and the women ought not to be left stranded. During the period of demobilisation no woman should be discharged without a month's notice or a month's wages. Before the war the average wage of women in industry was about 11s. to 12s. a week, and during the war it was approximately 18s. to 20s., and it would be a national error to let those wages go back to the old standard. It must be ascertained what industries were unhealthy or unsuitable for women, and when that had been decided the standard of wages must not be allowed to go down for women working alongside men in similar processes, although, of course, in some cases the rate of wages would not be exactly the same because women were less efficient in those trades than men. But in no case could it be suggested that a wage of less than 30s. or 35s. a week was a proper living wage for man or woman. She mentioned many improvements that were required in factory legislation, and urged that 48 hours should be regarded as a normal week's work for everybody.

Labour Leader

1916 cf: under June

AN OPEN LETTER TO "THE ENGINEER."

By R. C. WALLHEAD.

I have just received a cutting from the *Engineer* for November 3—that date is, I think, correct—in which you complain that I have misrepresented you, by quoting an article that appeared in the *Engineer* for December 1, 1915.

I will pass by your somewhat elephantine gambolling with my name, which is probably indicative of your taste, and certainly lacks the saving grace of wit, by ascribing it to a temporary loss of temper that your generous (?) proposals for dealing with Labour after the war should be resurrected from the comparative obscurity in which they lay, and placed before the thousands of people such proposals eminently concern.

I will again give the quotation, the meaning of which you say I have entirely perverted.

> The introduction of female labour might be used so as to lead to a lowering of the rates of payment for service. The fact of the matter is, not that women are paid too little, but that men are paid too much for work which can be done without previous training. It is only the Trade Unions which, after the war, will stand in the way of our realising the anticipation that we might be able to reduce our workshop costs by the employment of women. Much depends upon the attitude of the women themselves. If they can be brought to see the economic advantages to the country, to recognise the facts we have put forward, and agree to accept a lower scale of wages than skilled men they may, by their preponderance of numbers, be in a position to defy the Unions.

You admit that the quotation is "almost verbally correct," and then you proceed:

"The LABOUR LEADER matters little or nothing to us, but we must protest as energetically as possible against an article which, as a whole, has no such meaning, being distorted until it appears like a capitalistic attack on Labour. The article dealt with women labour, and pointed out that women might retain their place in the workshop if they would agree to accept lower wages than men, who have been paid on too high a scale for work that, as we now know, can be equally well performed by unskilled labour. Unions insisted on skilled men, fully apprenticed men, being employed on certain operations. Those men drew high wages. We now know definitely from experience that women can do the same work after a few weeks' training. The economic deduction is surely obvious. The more intelligent workmen, at least, will not ask the country to go on driving tacks with a golden hammer when an iron one will do as well; to use expensive labour where cheap labour is quite as effective."

When I say that if the temper disclosed in the quotation from your issue of December 1, 1915, represents the attitude of mind of the employers, it does not indicate any advance towards "the new spirit" which the war is said to have produced, you whimperingly tell us that I have misrepresented you.

Well, in face of your own exposition of the meaning of your article, do you still insist that I perverted your meaning?

When the Trade Unions made the concessions allowing dilution of labour, they did so upon the solemn understanding that the conditions prevailing before the war would be returned to. Personally, I never believed that that would be possible, for reasons which are probably more obvious now than was the case when the change was made. But you are proposing that the change shall be made permanent, not by mutual agreement with the Trade Unions concerned, but by using the "preponderating number of women workers to defy the Unions." Those are your own words. You propose to start a sex war, to set daughter and sister against father and brother, in order to reduce wages. If your argument does not mean that, then words have lost their meaning.

You tell me that my object seems to be "to set Labour against Capital." But that requires no effort of mine. You are proposing to make an attack upon the wages of men who you say are paid too much for certain kinds of work, and you propose to do that by the dastardly method of persuading women to defy the men's Unions in the interests of the Capitalists, who buy your meagre brains! Try and think again, and then you may discover that Socialists do not create the struggle between the workers and the Capitalists. They explain the causes of the struggle, and they point out to the worker the best means he can adopt in order that he may fight with the best hope and chance of success.

You charge me with loose thinking, and in doing so you imply that my looseness of thought is in connection with the use of improved machinery and quickened processes of wealth production. If your mental processes were not so vague, if you were conversant with Socialist thought, you would know that no Socialist objects to the use of improved methods in production. He objects to your method, the method you propose in dealing with the problem of female labour after the war. You evidently desire to use the quickened processes to bring down wages, and thereby reduce the standard of living of the worker, which was, in all conscience, low enough. I want quickened and increased output so used that wages should increase, the length of the working day be reduced, and the general standard of living of the workers be thereby improved all round, physically and mentally.

You say that men have hitherto been paid too much. I write this from the Clyde district, where, prior to the war, the wages of engineers was 8½d. per hour, 38s. 3d. per week of 54 hours, truly a magnificent wage. In some towns wages are as low as 34s. per week, and there are few places where engineers' wages soar into the empyrean heights of £2 or more. You may declare this to be too much, but you must not expect me to share your ideas. As opposed to that, my position is that if any work is necessary and useful it is worth a good living to the worker who performs it, and I absolutely deny that a rate of wages which does not guarantee more than an average of 34s. per week can be considered "high." You, evidently, have a curious conception of high wages.

If you wish to employ women upon work that they can now perform through the perfection of machinery in order to release men workers for wealth production in other directions, then the women and the Trade Unions ought to consent only upon the condition of equal rates of pay, otherwise evil results will accrue to the women workers.

I sincerely hope that before the workers in the engineering trades admit women workers at low rates of wages, which will indubitably tend to lower the whole standard of living, that they will fight with all their strength to the bitter end, and in that fight I will do my utmost to help by every means in my power.

WOMEN'S WORK.

THE AFTER-WAR PROBLEM.

Dr Henry Dyer, chairman of Glasgow School Board, delivered an address on "The War—and Women's Work and Education" at a meeting of the Association of Teachers of Domestic Science (Glasgow and West of Scotland) which was held on Saturday in the Religious Institution Rooms, Glasgow. Miss Martin, the president, presided.

Dr Dyer said it was evident that in the reconstruction which would take place after the war women would take a very important part. The unwelcome prospect of competition between men and women for the same kind of work and the problems involved would require careful consideration. Of all the problems which the war would leave behind it, the most complex would be the adjustment of the relationship of women to men and to the State. There would be three parties in the field—the employers, the working men, and the working women. The employers would be tempted to play off the women against the men by offering them higher wages than they had received previously, but which would be lower than those which had been paid to the men. The workmen would be tempted to deal with women as they had in the past, namely, by demanding their exclusion from the better-paid occupations. The women would be tempted to undercut men in order to secure employment. The economic struggle might be transferred to the political arena, where the women, unless they were by that time enfranchised, were likely to come badly off. It was evident that unless patriotism was translated in time of peace into a desire to make personal sacrifices for the national weal, there was certain to be a long period of trouble in the labour world. The condition which should guide all was that there should be equal pay for equal work and general efficiency. (Applause.) In a reference to the employment of women as car drivers and conductors in Glasgow, Dr Dyer said he had no love for seeing women doing work of that sort. He had too great a respect for women to put them to employment which required that hard work. He preferred that they should undertake work of a more congenial kind. Women should not be asked to undertake hard physical work which men at present did.

...men Workers After the War.

SIR,—No real study of this most important problem can usefully be made without due consideration of the psychological as well as the economic issues involved. In the current number of "The English Review," a pronounced feminist (Mr. W. L. George) takes up the attitude of the candid friend, and trenchantly examines the probabilities and dangers of the situation.

In order to excite an interest in the article, kindly allow a little space for the following excerpts: "It follows that at the end of the war a mob of female labour will seek employment at any price, undercutting itself and undercutting men." "As for the men who want the full life—meat, beer, and a shilling to put on a horse—they will be beaten by women who can live on bread-and-butter and a novelette." "Women dislike trade unions." The whole article is well worth the time and attention of every Socialist and trade unionist, especially those connected in any way with women workers. H. B. SAMUELS.

WOMEN'S POSITION AFTER THE WAR.

MRS. HENRY FAWCETT, speaking at the Aldwych Club yesterday on "The Sphere of Women after the War," said she did not believe that the barriers which had been broken down to enable women to enter skilled occupations would again be built up. Trades unions had made a mistake in the past in not encouraging women to get skilled work, and the standard of remuneration that went with it.

It would be impossible to ask women to go back to the conditions which obtained formerly in women's work, and it would put them at a terrible disadvantage if the bulk of the working men of the country had the franchise, and they were without a scrap of political power. If the franchise were in future to be based on service, the services of the women must be remembered.

WOMAN—AFTER THE WAR

I.

It is a matter of much discussion as to whether those callings and professions which have been thrown open to woman by the war will remain open to her after hostilities have ceased. It is argued that woman, having shown herself capable of administration, having given proof of her organising powers and adaptability, will be in demand in times of peace, and that having once got her foot into certain close corporations she will be able to keep it there. In my opinion woman has come to stay in the clerical departments of business life. Male stenographers and typists will be outnumbered by female, and for this reason. During the war, employers, deprived of skilled clerks, have been compelled to fall back on untrained girls. The latter, to their credit, have done their utmost to learn the work, and in an astonishingly short space of time have become as proficient as the man whose place they have taken at a lower rate of pay. Those clerks who return safe and sound and whose employers guaranteed them their situations will doubtless still find a vacancy awaiting them, but where the original clerks have been killed I do not think the employers will care to exchange female labour, already trained to the particular routine of an individual office, for male labour which has still to be instructed and which demands a higher wage.

This, however, only applies to the ordinary run of commercial offices. It has no reference to banks, insurance offices, or highly specialised commercialism of any kind. At the present moment the overwhelming majority of the clerks in banks are women, some few of them are book-keepers, and in the case of the latter they are undoubtedly highly skilled. The average rate of wage varies, according to the particular bank, from twenty-five to thirty shillings, and, of course, overtime is paid after a certain hour. The more highly skilled clerks are paid from £2 to £2 10s., and in one or two cases as much as £3 a week. It is not, however, at all likely that after the war women clerks will be retained in large numbers in banking establishments.

In all the big banking companies it is necessary for a clerk to obtain a nomination from one or more directors, and the candidates thus nominated are required to pass a certain examination. The majority of banks pay between £40 and £60 the first year of employment, and the salary is raised so much per year automatically. Those clerks who remain in the business are gradually promoted to positions of responsibility. The whole system, indeed, is founded on the idea that the particular bank shall obtain the services of a number of recruits specially trained for the business who, it is hoped, will remain with them throughout their career.

It is obvious, however, that such procedure would be impossible in the case of women. No woman in the beginning seriously regards her career as that of a clerk. She looks upon office work merely as a means of earning her living, or filling up her time until she gets married; and the banks would be faced with the problem of the annual loss of a number of recruits on whom they had expended a certain amount of training. I do not think that there is any chance of women being permanently employed in banks, though it is possible that some few may be temporarily retained.

The same holds good in the case of insurance companies. At a certain branch of a very old assurance society, numbering thousands of clients, the staff has been depleted of some twenty men, whose places have been taken by women. There remain in the branch only three men over military age, and the heads of departments are girls who, before the war, occupied the position of stenographers. They have shown themselves to be quite adequate to the work, and the general routine of the branch is carried on as in pre-war days. In some cases girls of four and five and twenty are doing the work of men ten years their senior, while the chief book-keeper of the branch, aged twenty-two, is doing the work of two trained accountants. Her salary amounts to one-third of the sum paid to each of the men, though it is fair to state that she is paid overtime after the hour of five. None of these girls, however, will retain her position after the war. They have been told specifically that they will return to their positions as stenographers, and that their technical knowledge of insurance work will not entitle them to a position on the staff.

For the members of the staff of an insurance society are in the same position as the bank clerk. They go in at a fixed salary and receive automatic yearly increases, and on retirement are paid a pension. None of these things, however, comes the way of the women employees; and although at the present moment the work of the insurance companies of this country, involving thousands of the most intricate calculations, is in the hands of women, I think it highly improbable that any but a very small proportion will be regarded as staff employees. After the war they will return to the work from which they came, subject to a week's notice, whereas a member of the staff, save for the very grossest incompetence or misconduct, is retained in his employment until old age.

In the case of young girls it is not easy to see how this particular rule can be altered; but it seems to me that where women have been employed in the same office for a number of years it would be to the advantage of the company which employs them to make them members of the staff. For it should be remembered that the woman in receipt of a good salary, with the assurance of permanent employment, is not likely to plunge into marriage so quickly or so easily as the young girl at a small weekly wage.

That this is a matter of regret, so far as the well-being of the nation is concerned, goes without saying. For the moment, however, I am discussing the probabilities of women retaining the salaries and positions which they have been receiving since the war, and I think it not impossible that a small number of women, say those over thirty, may retain such positions, even though the overwhelming mass of women will be dropped out of responsible positions in commerce directly the men come home.

The fact that there is a complete absence of combination among women engaged in offices, and that for the most part the idea of a trade union is regarded as vulgar, not to say lowering to the dignity of the middle-class, will strengthen the decision of the employers in this particular. Had women stenographers a working trade union they could have made terms with the employers and have secured, both from the banks and insurance societies, certain undertakings whereby those women who had so many years' experience to their record should be retained permanently on the staff.

It has been left, however, for the individual clerk to fight her own battle, and in some cases she will probably be successful. It has been brought to my attention that there is already one woman bank manager, and that some twenty or thirty others are being trained for similar appointments. Doubtless some proportion of these women will be retained when peace is declared, but the mass of women clerks will find themselves sent back to their old status.

I have dealt in this article with the two branches of commercialism which have swallowed many thousands of middle-class girls. I propose in my next article to deal with journalism, in which profession the war has left many vacancies which, at first sight, suggest the possibility of an increase in the number of women engaged on the Press.

Woman's Future in Great Britain

By Arthur Gleason

Bad years are ahead for the women of England. But let no one worry unduly. They have come to stay, and they will obtain the vote. During the transition period, when the shell factories are becoming industrial plants, when the returning soldiers will have first call on the jobs, when the men's trade unions are making up their minds whether women are their allies or their enemies, and when Parliament is deciding whether its ancient solitary reign will be molested by these energetic newcomers, the female semi-skilled workers will have a severe experience. The unskilled workers will have the same sordid experience they have always had.

This period of transition may extend through several years. Gradually, the creation of new industries, making use of the new automatic machinery introduced under war pressure, will again offer jobs to the demobilized women. Winning the suffrage, women will have the power to enforce their demands for proper payment, and, as voters, they will suddenly become welcome additions to the male trade unions, and, together, they will continue the fight for a high standard of living for both men and women.

About eight hundred thousand women have recently entered industry, transport, commerce, government employment and agriculture. Five hundred thousand of these are busy in munition-making.

Workers After the War

Many of these women will return to the home at the close of the war, but a large percentage have come to stay. The number of women now directly replacing men is about 800,000. These have replaced the men in semi-skilled and unskilled work, one woman for one man. This is direct substitution. Indirect substitution is found when woman takes the place of an unskilled man or a semi-skilled, who, in turn, takes the place of a fully skilled man. Group substitution, when a group of women takes the place of a smaller group of men. Substitution by rearrangement, when women plus automatic machinery do work previously requiring skilled workers. The introduction of women by these methods of substitution is practically universal throughout the trades. In trades with definite agreements the women's rates approximate the men's. Where there has been no agreement, the women's wage has been better than before the war, but still far too low.

Of women in women's work—in the fuse and powder trades, as the result of arbitration, a gain has been made. In electrical engineering and telephone work, except for certain cases, the rate has changed but little. Why has woman won a decided advance in mechanical engineering and not in electrical engineering? The answer is that she is organized in mechanical engineering. Skilled groups of women workers in the powder machine trade have won real advances. In sugar confectionery, tailoring and shirt making, a fair advance has been made. But all three trades are closely related to war work. Where the woman's trade organization has been strong she has obtained a decided rise in wages, whether she has been doing women's work or substitution work in men's jobs. But the bulk of women's industries have not kept step with the increased cost of living. Nor has substitution for men necessarily obtained the men's full rate. Munition workers have obtained a fair minimum promised them by the government exactly in so far as their organizations have enforced the promise.

It is clear, then, that it is possible at any time to obtain a decided advance in women's wages, including sweated industries. This advance will be obtained when, and not until when, the trade unions' movement enforces it. The trade union movement will probably not enforce it until women have the vote.

The war has introduced grave dangers to the health of women by night work, overtime, hot atmospheric conditions, such as occur in certain processes in woollen textiles; severe muscular action, as in the lifting of a heavy weight, and by poisoning, as in certain of the processes in shell filling. In munition work, there has been a nervous strain, connected with certain of the processes, and the dangers of fire and explosion. In addition, certain factories are in Zeppelin areas, and, on a telephone warning, all lights go out and the women lie flat on the floor until the danger is past. When the word comes to them to rise one or two in a department are found in a faint.

To offset this the government has made the most determined effort in the history of any public institution to enforce proper conditions of work, to fight against overtime, to establish cleanliness, sanitation and nourishment. The Welfare Department, under the Ministry of Munitions, conducted by perhaps the best known social worker in the English-speaking world, Seebohm Rowntree, has literally labored day and night to guard the girls and women of Britain. It has sought to preserve 500,000 women from results of war pressure which would have been disastrous. As a peace measure, welfare work is still an open question when conducted by private enterprise, unless it is clearly an addition to a living wage, and not a clever substitute for it. But as a government measure in a time of the severest crisis in the history of the world it deserves nothing but praise.

Of the 800,000 women who have transferred themselves into new work, how many are going to stay? No one knows. An organization to combine women in certain trades sent out recently a form of questions with the inquiry, "Do you wish, after the war, to return to your former work or to stay in what you are doing now?" Of 3,000 answers 2,500 replied that they wished to remain in the new work. That is, five-sixths. On the other hand, an investigator who has made a study of social conditions among the Coventry workers tells me that the majority of the women say they will leave industry and take up home life after the war.

Jobs for All?

Will there be work for all? No one knows. Coventry has already received orders for 1918, and it is probable that industry there will run on at full capacity for a year or two, at least, after the war. In Sheffield, the employers plan a swift conversion to the trades of peace. The great steel firms anticipate an undiminished demand for their product. What made shells will be turned into railway supplies, for instance. Already they have orders which guarantee the immediate future—orders from Great Britain and from Russia. They state that they will continue the women at work and will at the same time fit in the men. But such a report is unusual.

There are men's trade unions, as in certain of the transport workers, who stood by the job until the women received the same rate of pay as they possessed. One or two other men's unions have promised to make the same fight for the women. But these instances of rendering the work of reconstruction easy are rare, and the women must probably make their own fight, unaided by the government, by the men's trade unions and by the employers. Unorganized and unenfranchised, they will be the centre of unrest and suffering—a running sore in industry, imperilling the standard of living established by the men's organizations, scabbing wages and weakening the trade union movement. With votes and widespread unions they would become a vital element in the emancipation.

It rests with the women, by agitation and pressure, to establish for themselves a standard of living and to hold fast to the undoubted immense gains they have made during the war. The task is probably not one primarily of creating work. The rebuilding of Belgium and northern France, the deterioration of plant in Great Britain, the closer industrial association of England with her colonies, the needs of Russia—all give promise of a stimulated market for British products. The task is one of organization, devising a machinery for connecting the worker with the job, safeguarding unemployment and maintaining the standard of living. The new Minister of Labor is arranging to breathe life into the sleepy institution of labor exchanges and to add 800 to the number. The government has offered the extension of compulsory unemployment insurance, which only meets the needs of some of the war workers, and meets those needs only in part. Seven shillings a week amounts to poor relief, and does not reconstruct the industrial situation of the total group.

Certain of the women leaders have suggested a widespread unemployment insurance which shall preserve the standard of living, an analysis of the market as to where workers will be required, with the distribution of such information through trade unions and employment exchanges, and a supply of blank forms to be filled up by the workers desiring future employment; due notice of dismissal to be given by "controlled" establishments, and return railway fares to be paid to those workers who have come from a distance, and the use of government factories for a continuing national work. Further, they have suggested a system of training in new trades for women displaced from work. Such is the immediate programme.

Suffrage Will Decide

But back of it lies a deeper need. The suggestion has been made for a minimum wage. This could well be made part of the general policy, which was already beginning to be formulated before the war, for a minimum wage in agriculture and the underpaid men's trades. Other measures of reconstruction are being pressed by the leaders of working women. Investigation is needed as to what employments are hurtful to the woman's organism. Reform of the factory laws is included in the changes that are now seen to be required. The eight-hour day must be enforced. President Wilson, by his decision in the railway strike, has enforced a principle to which the trade unions all over the world must respond. Women officials are required in greatly increased numbers to safeguard the position of women in industry. Not only must the number of women factory inspectors be increased, but it may prove to be necessary that the new profession of welfare workers in factories shall be appointed by the state rather than paid for by the employer, and the new Labor Ministry must have among its undersecretaries a representation of women. The trade unions must grant admission to women in return for monetary contributions, and the women must have a measure of control of the machinery of the union. The children, who by means of a special certificate have leaked into industry, must be returned to school. This, at one sweep, would relieve the labor market of 180,000 persons in industry and agriculture. It is probable that all these reforms are dependent on the winning of the suffrage.

The Wild Animal Famine

(From The Detroit Journal)

The wild animal market of Hamburg, in its flourishing day the largest in the world, is closed up bone-dry. There is such demand for shipping facilities that ships cannot afford to carry such things as animal cages, at once bulky and having much waste space. Traders who went into the back country and brought out its strange creatures now bring out only rubber, pound for pound more valuable than anything that breathed and not given to biting off careless fingers.

That is why there is a famine in monkeys. Zoological gardens have to depend upon nature for fresh specimens, not upon the shippers. Experimenters have to stick to guinea pigs. Actresses must go back to poodles.

WOMEN IN INDUSTRY,

What will be Their Position After the War?

SHEFFIELD CONFERENCE.

At a conference of the Sheffield Women's Industrial Joint Board, in the Montgomery Hall, on Saturday afternoon, with Mr. W. Kean in the chair, Mr. W. C. Anderson, M.P., moved: "That this conference demands that in all cases of demobilisation of women after the war such means shall be employed as shall inflict the least hardship on the individuals concerned, and such measures must be adopted as will produce the maximum of harmony in the industries concerned." He said that if the war came to an end with working men and women unprepared as to what they wanted to happen, then the future would be very black. There would be some millions of soldier workmen coming back to work and there were three or four million workers now engaged on urgent war work, many of whom would find a slump in their work. While there would be big schemes of work on housing, and putting in order the countries devastated by the war, replacing the ships lost and in other directions, there would be difficulty in doing this work if the cost of materials was high.

Million More Women Workers.

Different districts and trades would find themselves differently affected. About a million more women were now in industry than before the war. Some of them wives o soldiers, others middle-class women, and some from other walks of life, would want to leave industry, but others would want to remain, and he thought it advisable that the trade unions of men and women should confer and come to agreement to see that there was no clash for jobs, no sex war. He suggested that arrangements should be made to give munition workers thrown out at the end of the war similar benefits to those promised to soldiers, and special arrangements made in the Labour Exchanges to find them work.

Councillor A. Short, who seconded, said that Labour Exchanges could not place workers in jobs unless there was work for them, and he recommended the development of agriculture to find such work.

The resolution was carried.

Shorter Hours.

Miss Margaret Bondfield moved that women, having shown fitness for many classes of work hitherto reserved for men, shorter hours should be adopted to retain women in such occupations, and that a council should be appointed to make recommendations for legislation on the matter. She urged that women should not consider they had an open road into every trade without consideration of the welfare of the men and of other women. Consideration should also be given in choosing the employment of the physical disabilities to be faced, and the effect not only on the women but on future generations. They wanted a fresh consideration of Trade Board rates, and efforts made to speed them up in making new rates, which was a very slow affair.

The resolution was seconded by Mr. C. Bobson, and carried.

A resolution moved by Mrs. Wilkinson, protesting against the extension of working hours for women, was also carried.

WOMEN WORKERS.

MR SNOWDEN AND THE LABOUR PROBLEM.

Mr Philip Snowden, M.P., in an article on "The Problem of Women in Industry," in the annual report of the Blackburn Trades and Labour Council, reviews the effect of war conditions upon the labour market, and the great inrush of women to trades and occupations formerly reserved for men.

The opposition of the trade unions in the majority of cases has in the past (says Mr Snowden) retarded the entrance of women into the skilled and mechanical trades. The abrogation of trade union rules and customs, and the adoption of schemes for the dilution of labour, have for the time being broken down this obstacle to the larger employment of women. This will be the most serious of the many phases of the question of women's labour which will have to be dealt with after the war, and upon the way in which the relations of women to trade unionism is settled will depend whether this innovation is to be harmless or extremely detrimental to the general standard of labour conditions in this country.

"It is probable (he continues) that it will be in the engineering trades where the greatest difficulty of dealing with women labour will be experienced after the war. It is not correct to assume that women have taken the places, or at any rate are doing the work, of skilled men in the engineering trade. What has happened, rather, is that there has been a re-arrangement of work, and the skilled man, instead of being employed only partially upon work requiring great skill and experience, and for the greater part of his time on work of a mechanical nature, has been put wholly to work of the first-named class. The extension of automatic machinery will assist the employment of women permanently, and it will lessen the demand for highly-skilled labour. There will undoubtedly be a very large number of women after the war qualified to take the places of men as machinists in engineering workshops—work of a semi-skilled or unskilled character.

"We have to consider, therefore, recognising that this women's labour will be largely available, the extent to which it is likely to be utilised by the employers. They will, to a large extent, depend upon two things: First, whether such women can be utilised for the purpose of keeping down the rates of wages, and, secondly, made available for employment in labour disputes. Normally, the employer is sufficiently alive to his own interests to employ those workpeople, regardless of sex, which are most profitable to him. If experience has shown that women are inferior to men in such work, and unless that inferiority can be compensated by lower wages to the women, women will not be employed. Generally speaking, the views of the employers are that women are inferior to men in organising power, interest in business, initiative, resourcefulness, and physical strength; but that women are superior to, or equal to, men in manual dexterity and deftness, in routine work, and in positions above which they have no desire to rise. The conclusion to be drawn from this experience is that in mechanical occupations where manual labour and deftness are of importance, and the work is of a routine character, employers will not discriminate between men and women, if wages are equal.

"To sum up, then, the question is mainly one of equality of conditions. Trade unions must recognise that the competition of men and women cannot be destroyed. It may be equalised. That is the crux of the question. By legislation, or by trade-union organisation, the possibility of women competing on the basis of lower wages must be made impossible. If the principle of equal pay for equal output is enforced, then the competition of women in new spheres of industry may be regarded with equanimity. On that basis the competition will be one of efficiency and not of wages."

WOMEN AND WORK.

AN AFTER-THE-WAR PROBLEM.

Yesterday, at the Liverpool Rotary Club, Miss Eleanor Rathbone delivered a short address on "The Position of Women." Everyone recognised, said the speaker, that the war had, for good or for ill, made a great and permanent change in the outlook of women, and it was a change which was almost opposite to what even the most hopeful feminists could have anticipated. In the first paralysis that fell upon industry after the war women's industries were hard hit, and there was considerable dislocation of employment. But after a few months they began to recover, and others had sprung up. The making of munitions was an industry that women had thrown themselves into with very great heartiness. A revelation as to the industrial capacity of women was one of the changes that the war had brought about. The problem that was pressing upon the country at the present time, the conservation of the food supply, was bringing home to all of them the fact that the question of how to spend their wealth was quite as important as how to produce it, and clearly this was a problem, the successful dealing with which was going to depend to a very large extent upon women. As to what was going to happen after the war, Miss Rathbone said that women were not going back to their pre-war occupations. It was unfair in the interests of the women themselves to ask them to do so. Now that they had shown their capacity for doing skilled work in occupations which were before closed to them they would not willingly give up their economic independence. Then, from the point of view of the employers, were they going to be content to do without the great reserve of female labour which they had found so valuable and so useful? And, from the national point of view, was it right that the nation should deprive itself of any great fount of human energy, ability, and skill? Miss Rathbone urged that, while women were prepared to make all the sacrifices that they could reasonably be called upon to make, they should be free and enfranchised and given the same opportunities of appealing to Parliament as men.

The President (Mr. Lloyd Barnes) conveyed the cordial thanks of the club to Miss Rathbone for her talk.

"BLIND ALLEYS" FOR GIRL WORKERS.

Complacent people are continually saying "the war has discovered women, given women their chance, shown themselves and other people what they are capable of."

Of course it is perfectly true, but there is another side to the question, and it is one to which more attention must be paid if the war is not to do a very bad turn to the girl workers of this generation while doing a good one to the women.

Ask any teacher in a big secondary school for girls what the effects of the war have been on the school, and she will tell you that one very deplorable result is the transference of dozens of girls at about the age of 15 from school to business life. One after another they leave from the middle forms, attend a commercial college for a short time and pick up the rudiments of shorthand and typewriting, and then "get a job" at a few shillings a week.

Of course there are jobs of a kind in plenty with the present shortage of man and boy labour, but for most of these girls they are simply "blind alley" occupations, leading to nothing in the future, for not only will some (alas! not all) of the men come back to their jobs later on, but also simultaneously the pressure of work due to the war will slacken in many directions and the crowds of temporary girl clerks will be a drug on the market.

"It almost makes us *weep!*" said a woman who teaches in one of our largest cities the other day. "For it isn't as if they were doing work of such value to the country that the sacrifice can be reckoned worth while. They are not. An enormous percentage of these girls are not in the least fitted for the life and can never by any possibility develop into good business women. I have talked with several really efficient women clerks lately and they all agree that girls of this type are of very little use, and that the time which has to be spent by their superiors in putting right their mistakes practically discounts what they do to help.

"Now ever so many of these girls would be extremely useful in other work—on the land, for instance—but they simply won't hear of anything but the commercial college—commercial college all the time—until we teachers begin to hate the sound of the words! The present state of affairs is simply an abuse of a useful institution."

* * * * *

"Who is to blame?" I asked.

"The parents chiefly. The general plea is that they cannot afford to keep the children at school later in these hard times; but in many cases we *know* that is not the real reason, as the people are better off now than they have ever been. No; it is just that it is 'the fashion.' Mrs. Smith boasts that her Florrie, who is only just turned fifteen, is earning 15s. a week in So-and-So's office, and Mrs. Jones feels that there is something disgraceful in the fact that her Lily is still at school though nearly sixteen, and has never earned a penny in her life. And they think a clerkship is something extraordinarily 'high class.'"

Cannot the parents manage to see clearly in this matter in fairness to their daughters? It is their business to do so, for the girls have no experience of life, and it is natural for them to enjoy having money to spend.

Of course another obvious aspect of the question is the danger of allowing girls of this age to be freed suddenly from discipline and restraint and to become their own mistresses with money to spend and no responsibilities. The big offices that employ most of these young girl clerks are usually situated in large towns, which makes the matter worse. The majority of these girls ought to be still at school or in training for a really useful career, or, if expense is really a difficulty, doing some work of a different kind where they can be looked after as individuals instead of being left to their own devices to work out their own salvation—or the opposite. One can hardly blame the girls themselves for enjoying, and perchance misusing, what they call their liberty. One might as well put a small child in a sweet shop and expect it to use common sense and not make itself sick!

GRACE MARY GOLDEN.

TRADE AFTER THE WAR.

WOMEN & WORK IN THE BUSINESS WORLD

BY EDITH M. BARTON.

I.

The average modern business man's estimate of the business acumen and intelligence of woman is, it must be confessed, somewhat on a par with that of the French King, who said, "Madame, we have taken you to give us children—not to give advice." And the modern business man is not far wrong. Woman has depended so long on her economic value as the mother of the race, that even her much-vaunted adaptability is somewhat tried when she is suddenly called upon to take a new and responsible part in the world's business. No wonder only 50 per cent. of the Women's War Service Registrations were effective entries; or that of these only one-tenth were given employment.

Yet educated women are as eager to prove themselves in trade or business as women of the industrial classes have done in industry. But to be a real national asset in business in the coming tussle girls must be educated from a business point of view, in the same way as are the boys of the family. The need cannot be met by an intensive course lasting from one to two months, which may slightly familiarise women with business routine and requirements, but by no means saves the situation.

WOMEN IN COMMERCE.

How far women can help in the commercial fight for trade after the war is a moot point. At present feminine activities in this direction are in a transition phase brought about by a temporary shifting of men and women's sphere of work; only after much experimenting will each individual find the best expression for its special qualification. In the national interest, means should be taken to level the state of affairs, and this with the greatest possible dispatch. Sir Clement Kinloch Cooke wrote as far back as December, 1915, advocating that the question of women's employment after the war should receive the closest possible attention; that select committees composed of members of both Houses of Parliament should be convened, the proceedings being conducted in public and carried on from day to day. In 1917 the intensive system in business training still holds sway—to our discredit.

CROWDED PROFESSIONS.

But unless girls are educated on business lines, Commissions are powerless; and even in these modern days most parents hesitate to allow their daughters to be educated on business lines of efficiency. Where girls are fortunate in having a really decent education they are dumped into a profession; for by some unknown course of reasoning, though business may be all very well for the boys of the family, for girls it is not "the thing." Consequently every other educated wage-earning woman one meets is a teacher, acknowledgeably one of the worst-paid of professions. Since the war, women are crowding into the medical profession in the same way. Here, at present, they are wanted, although how far this is a temporary demand brought about by the exigencies of war, remains to be proved.

The question to be faced is what will happen in cases where the men do not return. Home Office Committee schemes of intensive training tend to flood the market

WOMEN & WORK IN THE BUSINESS WORLD.

BY EDITH M. BARTON.

II.

Much has been written about the way in which women have made good since the war, but there is another view of the question. It is no exaggeration to say that thousands have proved their incapacity in spheres which men have hitherto considered distinctly their own.

And yet women have many advantages. They possess a greater innate recuperative power than men, are more resistive to adverse influences, and longer lived than men. If statistics are to be believed, they are more honest than men in the long run. Another authority affirms that on the whole, whether for accuracy, patience, and assiduity women are to be preferred to men in clerical work, although it must be remembered that with regard to accuracy it is not the accurate people who are always accurate—it is the inaccurate people—on their guard!

Apart from the feminine pitfall of adaptability, there are various reasons for these failures.

To men business is a great adventure, fascinating, as an essential factor in the progress of civilisation. A life adventure, in fact, and one that is to achieve great results by personality, integrity, and pluck.

FEMININE SOPHISTRY.

To women business is merely an incident; a rather boring interlude in the general scheme of living and loving and giving in marriage. Although she may spend half a lifetime in an office, a woman almost always forgets that commercial success is personal, not social, and can only be won at a price. That the qualities of persistency, intelligence, and integrity tell as much in a woman's work as in a man's; that she has the same chance to "make good." To return to an old story, her commercial horizon is walled in by her working hours. At the earliest possible moment she thankfully pins her pretty hat on her pretty head and turns her back on the day's work as so much mere drudgery!

Women must "wake up" if they are going to do their share of work in the great after-war projects in British trade. Facilities for improvement are theirs, opportunities are theirs. Success may be theirs. But success is not easily won.

How many women in city offices are earning anything like £300 a year? Only a very few, equalled in number probably by those few women who have even a slight knowledge of the technique of finance, of some dim idea of what a "graph" conveys.

UNLIMITED OPPORTUNITIES.

Unfortunately most women have a warped idea of the vast economic trading system which makes civilisation possible. With all their imagination and intuition they have failed to visualise the wide scope for enterprise and efficiency in the business world.

But the fact has to be faced that during the strenuous years after the war the development of business and trades will vie in importance with professional work, already a rather played-out proposition. Trade offers unbounded possibilities for success, for work for Empire, on broader lines hitherto undreamed of; it must not be forgotten that professional women are limited to purely insular interests.

After this great war Germany is confidently awaiting the great economic "boom" which has its prototype in the period after the war of 1870. It is up to the British to disillusionise the Huns; and women, who are becoming a power in national economics, may do their part in safeguarding national commerce.

labour, but for most of these girls they are simply "blind alley" occupations, leading to nothing in the future, for not only will some (alas! not all) of the men come back to their jobs later on, but also simultaneously the pressure of work due to the war will slacken in many directions and the crowds of temporary girl clerks will be a drug on the market.

WOMAN AFTER THE WAR.

Her Choice and Her Necessity.

(By ELISE GRANGE.)

"Men will be quite domesticated after the war," said a friend of mine as we were passing through a military camp the other day, where the men were carrying out sundry necessary domestic duties, such as the preparation of meals for the soldiers and the cleanliness of the camp.

I thought how remarkable a feature of the war it was that not only have women taken on men's work, but, by force of circumstances, many men have taken on work which, in pre-war days, was peculiarly part of woman's sphere. Housewives, for instance, feel the presence in the larder now of a man who forbids her to do this or that. She is no longer the mistress of her own foodstuffs. There is a being in the house who dares to find fault intelligently with her methods, and even go so far as to sit in judgment upon the cookery book.

Yet, after all, it does not disturb her imperially! She feels that when peace is restored it will synchronise with the majestic return of her power in the larder and entire command of household duties, no matter how efficiently domesticated the exceptional times may have made the man. Nor is she troubling herself whether these domesticated men—now in the making—will remain of the domesticated world. She does not care one iota whether they do so remain or not, for in either case she would not be robbed of anything. Things are different, however, in the business world. Men *are* concerned, and quite naturally so, as to whether women will remain in any material degree in the sphere of the male. They ask themselves whether peace will mean the return to the fireside of the myriads of women war workers. Will the office stools be vacated, the bench and the plough be taken over once more by the men who left them? We are justified in indulging in an abundance of speculative sentiment in this matter. We are right when we say the men ought to have their jobs back again, but we are also entitled to powder over our reflections the dust of sentiment for the women, too. Let us see.

Of Necessity.

Women cannot of necessity return—at least immediately—to the hearth and remain there in anything but small numbers when the war is ended. In many cases the country has claimed the life of the one who before the war made the home possible; and, again, there may be by the fireside, permanently, a crippled or a blind man. It is hardly likely the woman of such a home would feel that she ought to vacate the desk, or the bench, or the plough.

In thousands of instances the fight for existence will be woman's justification for retaining her war status and holding on to the job which she has made her own. If we have taken her breadwinner, or have returned him to her a burden, that woman has the right—the indisputable right—to continue in her employment and to be remunerated equivalently with men. Will profiteers dare to offer these women, who have given of their best, a wage which means for them a bare subsistence? If we have permitted the breadwinner to be killed we have no right to relegate her to a pre-war position. We must spare her some sentiment, too.

702/85

Of Choice.

Another phase of the woman's position after the war is whether she will *choose* to remain on the sacred soil of man's domain when necessity is not in the reckoning. Will she be ready and willing to return to the dusting, the needlework, the pastry-making, or to the more laborious duties of scrubbing, washing, baking, and battling with babies? A few may. Just the few who will make the undeniable exception to the rule, for the rule will, to all appearances, be that woman will remain where war conditions have placed her.

She has tasted the sweets of comparative independence; economically, she has discovered her individuality; we have hustled her into the belief that she is economically indispensable—a necessity as a war winner; she has been remunerated in hard cash handsomely and well. She will quit her job not only with reluctance—she will return only under pressure to the humdrum existence which she was persuaded by the exigencies of the time to forsake.

It is, therefore, reasonable to assume that for a time, maybe a considerable time, woman, as regards the position she holds in the labour mart, is where she will remain. The word "sphere," as applicable to men's work and women's work, has in many cases shed its significance. Man's and woman's spheres have ceased to be distinct. It was necessary that this should be so. Bloodshed has erased the equator; the barrier which has hitherto divided the sexes has gone.

The "sphere," as it was known to us, is no more, and all that remains is for the employers of female labour to make haste in serving *their* apprenticeship, in order the better to know how to treat women workers, neither to pamper nor bully, for at the present time male employers of women and girls do either the one or the other. Women expected to be treated on a basis of business, one of equality in every way with men. When this obtains we shall be making rapid strides. Unused energy is of pre-war days, and who would have it otherwise. None but the prejudiced.

Women have come to stay in the industrial, commercial, and professional world. Their ability has been proved, their necessity established beyond doubt. The choice of women labour was made spontaneously and received popular national acclamation. Posterity will judge whether post-war treatment of them is just.

RECONSTRUCTION AFTER THE WAR.

Problems of reconstruction after the war are to be discussed at meetings to be held from August 3 to 12 in the Hampstead garden suburb under the presidency of Mrs Barnett.

Among those who will deliver addresses are the Bishops of Oxford, Lincoln, and Peterborough, Canon Masterman, Principal Selbie, Sir Oliver Lodge, Mr. Herbert Samuel, M.P., Mr. Sidney Webb, Lord Leverhulme, Miss Mary Macarthur, Lord Lytton, Lord Burnham, and Mrs. Crichton. The motto of the meeting is: "Where there is no vision the people perish."

WOMEN IN INDUSTRY.

LECTURE BY DR. MARION PHILLIPS.

At Ipswich on Wednesday evening a large audience assembled to listen to a lecture by Dr. Marion Phillips, general secretary of the Women's Labour League, in the part now being played by women in industry, and the wide and far-reaching results of such employment. The meeting, which was presided over by Councillor R. F. Jackson, was held under the auspices of the Women's Labour League, in conjunction with the Women's Section of the Furnishing Trades and Workers' Union.

In introducing Dr. Phillips, the Chairman said the introduction of female labour to such an extent as now known amounted to a silent revolution, and they ought to consider what would be the permanent effect on labour, and whether the result would be to improve the general conditions of male labour, as had been proved to be the case with female labour. Trades Unionists had now to decide upon their policy, and he was of opinion that the best policy would be to act not as a sex union, but as one union desirous of improving the conditions of labour generally.

In her opening remarks, Dr. Marion Phillips dwelt on the present condition of women's labour, and the effect which the war had had upon industry. The good effects were infinitely more important than the bad ones, these by the improvement in the standard of wages and the wide opening of industrial paths hitherto closed to women. Women's work had improved all round. The great question was what attitude the men, especially the Men's Trades Unions, were going to take towards women when the war was over. In dealing with women they had to face realities, and consider the women's, the employer's, and the Trade Union's positions. They could not imagine that women would readily face a situation whereby they were totally excluded from a large number of trades in which they were fully capable of doing the work. It was perfectly natural that men should see the danger of women's competition in undercutting wages, but that danger had been welcomed in those unions which fixed the basis of payment as "equal pay for equal work." The lecturer saw no reason why that principle should not be extended throughout all industry, so that women would come in only with an equality of economic standing. The whole of the questions referred to required a change of outlook as well as system, and they had to look at the matter from a different point of view—not to go on saying that women were the people who undercut wages, but to give them a chance not to undercut. And the facilities for women to enter into Trade Unions must be increased in every possible way, to assist in gathering in the unskilled and semi-skilled women in larger numbers. If men and women worked together with the same intention of attaining unity, there would be more hope in the future than ever before.

Builder 13-7-17

Problems of Reconstruction.

A summer meeting is being arranged for the first time in London this year, and will be held in the Hampstead Garden Suburb from August 3 to August 17, to consider problems of reconstruction. Among the subjects to be considered are all the main problems of reconstruction, whether religious, international, economic or educational; and a strong section will deal with arts and crafts, under the presidency of Mr. Henry Wilson, with whom will be Sir John Burnet, Mr. George Clausen, Mr. Halsey Ricardo, Professor Lethaby, Mr. C. Harrison Townsend, and others. Addresses will be given by the Bishop of Oxford, the Bishop of Lincoln, the Bishop of Peterborough, the Dean of York, Canon J. H. B. Masterman, the Earl of Lytton, Lord Burnham, Lord Henry Bentinck, M.P., Principal Selbie, Sir Oliver Lodge, Mrs. Creighton, Mr. Herbert Samuel, M.P., Miss Maude Royden, Mr. H. J. Mackinder, M.P., Mr. Sidney Webb, Mr. J. A. Spender, and Miss Mary Macarthur. Particulars, including proposals for outings and relaxation, may be obtained from the Secretary, Miss Bolden, The Institute, Hampstead Garden Suburb, N.W. 4

TRADE AFTER THE WAR.

WOMEN & WORK IN THE BUSINESS WORLD.

BY EDITH M. BARTON.

III.

During the coming trade war gaps in the depleted ranks of business workers must for the time being be replaced by women. There are, broadly speaking, two great classes from which these workers may be drawn—the well-educated type who, before the war, devoted themselves mainly to those professions open to women, and the vast army of girls newly embarking upon life from schools of every grade.

So far it is the professions which have almost wholly absorbed the energies of educated women workers, and this mainly by reason of the advice given by modern educationalists. There has been a conservative idea that it was infra dig for a girl to have a bent towards commerce. Truly, with all our vaunted independence, we are not very much in advance of the Mid-Victorian phase of a "gentle race of gentlemen petters." The professions are "genteel," and so parents are advised to turn their daughters into teachers, doctors, dentists, nurses, civil servants, sanitary inspectors, health visitors, and welfare workers. All professions more or less overcrowded *and* underpaid.

Consequently at present the business world is flooded with young, half-educated, and superficially-trained girls, who can never hope to attain success in their work; they are so heavily handicapped at the outset. They are even lacking in the first rules of the game, for they cannot master arithmetic and they cannot spell correctly. An educated woman who has been working some months in the National Service Department at St. Ermin's, and is now under the L.C.C., declares that the time and the amount of paper wasted simply because women and girl clerks cannot spell is "appalling." The standard is equally low in city offices.

EFFECTIVE MEASURES WANTED.

This state of affairs can only be remedied by those responsible for education, and if women are to be a factor in commerce as they are already in industry, prompt and effective measures must be taken in the fundamental process of educating girls on higher lines. During the coming years it will be more necessary than ever for girls to be trained to be absolutely self-supporting. In many instances war will leave them without father or brother. Their prospect of marriage will be lessened. The war has effectually answered the plea for women's emancipation. Women of the future will perforce have to fend for themselves.

Protection is preparedness, and the vast majority of our middle-class girls are in a parlous state of unpreparedness. In their industrial capacity women have proved themselves a power. In the professions women are making headway; in commerce and trade women, en bloc, are at present almost a failure. Why?

Perhaps commerce has not attracted quite the type of girl required to ensure business success. But whatever the material, it is there to be used to the best advantage, and this can only be done by preparing the groundwork of education on right lines. Certainly it cannot be achieved by a course at a cheap business training "college," of which there are far too many, and whose methods are utterly inadequate to cope with the work of patching up our modern system of educating girls versus boys. This lower standard for girls' education and an extraordinary lack of ambition are among the main factors of failure.

Education on national and elastic lines must be made the means by which the boy or girl of real ability may be fitted to fill any position which their intelligence indicates. Girls need a knowledge of English. How many, or rather, how few, typists can compose even an ordinary business letter every business man knows. Then need a business knowledge of

TRADE AFTER THE WAR

WOMEN & WORK IN THE BUSINESS WORLD

BY EDITH M. BARTON.

IV.

Women who are on the eve of winning political responsibility have hardly as yet awakened to the importance of business responsibility. To compete with enemy trade after the war there must be a sound system of national self-protection, and in this system femininity must of necessity play an important part.

How far the well-educated woman who sets out to woo success in the world of commerce will succeed remains yet to be proved. Esoterically she has many advantages; to commence with, her intuition should be of value; under her feminine impulsiveness there is usually much patience with minor details allied with great administrative ability. Moreover, she possesses the charm of novelty. It is still a new sensation for the city financier to barter stocks and shares with a woman; to meet in the stronghold of his city office a member of the opposite sex able to discuss finance and futures with an all-round knowledge that commands his respect.

And already there are a few such women, who have embarked on a business career, who by their steadiness and application have won for themselves positions of responsibility; and this apart from the enormous number of business women who have quietly and unostentatiously worked up huge returns for their firms—ostensibly managed by men—in every department of trade.

THE DANGER.

For the really capable woman who proves invaluable at her work the danger lies in the fact that should she enter post-war schemes of commerce in any great numbers—and this is fairly sure to be the case—the comparatively few responsible positions will be given to men at the head of affairs. If educated women are to make good in commerce, stronger inducements must be offered in the way of salaries. The old order must be swept away, and if women attain to positions hitherto held by men, they should also attain the salary of masculine proportions.

The well-equipped woman will find among city men a very conservative attitude of tolerance towards women in business, which is almost as difficult to meet as actual hostility. One business woman who commenced life in a city office as a 15s. a week typist, once asked her chief a question on the subject of finance, only to receive a tolerant smile and the reply: "You would not understand if I explained; no woman knows anything about finance"! The same woman—still young and charming—is now drawing a yearly salary of nearly £500, and "does not intend to stop at that."

COMMERCIAL POSSIBILITIES.

Her opportunity came when all the best men of the firm had to leave "for more important business in France," and the chief, during a visit to America, left everything in her hands. She "carried on," buying and selling stocks and shares and generally conducting the business with so much success in his absence, that on his return she was promoted to her present position.

Undoubtedly the time is nearing when women, too, will take a place among the aristocracy of commerce. One may cite clever Lady Mackworth as an instance of the heights to which a woman with ambition may attain. It is said that her services must be worth at least £10,000 a year to the business concern with which she is connected. Here one meets sheer business capability of the highest order, combined with Discretion—which one reads means Prudence—Judgment.

Apart from the tremendous commercial possibilities for women in post-war commerce, great opportunities are afforded of

we are not very much in advance of the Mid-Victorian phase of a "gentle race of gentlemen petters." The professions are "genteel," and so parents are advised to turn their daughters into teachers, doctors, dentists, nurses, civil servants, sanitary inspectors, health visitors, and welfare workers. All professions more or less overcrowded *and* underpaid.

Consequently at present the business world is flooded with young, half-educated, and superficially-trained girls, who can never hope to attain success in their work; they are so heavily handicapped at the outset. This state of affairs can only be remedied by those responsible for education, and if women are to be a factor in commerce as they are already in industry, prompt and effective measures must be taken in the fundamental process of educating girls on higher lines. During the coming years it will be more necessary than ever for girls to be trained to be absolutely self-supporting. In many instances war will leave them without father or brother. Their prospect of marriage will be lessened. The war has effectually answered the plea for women's emancipation. Women of the future will perforce have to fend for themselves.

Protection is preparedness, and the vast majority of our middle-class girls are in a parlous state of unpreparedness. In their industrial capacity women have proved themselves a power. In the professions women are making headway; in commerce and trade women, en bloc, are at present almost a failure. Why?

Perhaps commerce has not attracted quite the type of girl required to ensure business success. But whatever the material, it is there to be used to the best advantage, and this can only be done by preparing the groundwork of education on right lines. Certainly it cannot be achieved by a course at a cheap business training "college," of which there are far too many, and whose methods are utterly inadequate to cope with the work of patching up our modern system of educating girls versus boys. This lower standard for girls' education and an extraordinary lack of ambition are among the main factors of failure.

Education on national and elastic lines must be made the means by which the boy or girl of real ability may be fitted to fill any position which their intelligence indicates. Girls need a knowledge of English. How many, or rather, how few, typists can compose even an ordinary business letter every business man knows. They need a business knowledge of languages, and they, of course, need the simple rules of arithmetic and spelling. All these qualifications, if mastered early at the outset of a career, make for efficiency in after life.

What is really wanted is a Press campaign with regard to girls' education. Then the higher education of women might receive its due meed of consideration.

great administrative ability. She possesses the charm of novelty. It is still a new sensation for the city financier to barter stocks and shares with a woman; to meet in the stronghold of his city office a member of the opposite sex able to discuss finance and futures with an all-round knowledge that commands his respect.

The well-equipped woman will find among city men a very conservative attitude of tolerance towards women in business, which is almost as difficult to meet as actual hostility. One business woman who commenced life in a city office as a 15s. a week typist, once asked her chief a question on the subject of finance, only to receive a tolerant smile and the reply: "You would not understand if I explained; no woman knows anything about finance"! The same woman—still young and charming—is now drawing a yearly salary of nearly £500, and "does not intend to stop at that."

COMMERCIAL POSSIBILITIES.

Her opportunity came when all the best men of the firm had to leave "for more important business in France," and the chief, during a visit to America, left everything in her hands. She "carried on," buying and selling stocks and shares and generally conducting the business with so much success in his absence, that on his return she was promoted to her present position.

Undoubtedly the time is nearing when women, too, will take a place among the aristocracy of commerce. One may cite clever Lady Mackworth as an instance of the heights to which a woman with ambition may attain. It is said that her services must be worth at least £10,000 a year to the business concern with which she is connected. Here one meets sheer business capability of the highest order, combined with Discretion—which one reads means Prudence—Judgment.

Apart from the tremendous commercial possibilities for women in post-war commerce, great opportunities are afforded of achieving valuable social work.

One woman of modern ideas and wide sympathies on the Board of Directors of any important company, could do more good for the general welfare of the staff of a large industrial concern than twenty "Welfare Workers."

Fundamentally, the capable business woman should be responsible for much good reconstructive work. Commercially her services when she is well educated and highly trained should be invaluable.

TRADE AFTER THE WAR

WOMEN & WORK IN THE BUSINESS WORLD

BY EDITH M. BARTON.

V.

Always at various times in the history of English commerce and industry there have been epoch-making periods. But all these are as nought compared with the consequences of present-day events, which have brought women into the arena of the world's work in almost overwhelming numbers.

At present there is one burning question in connection with this new economic aspect. What is going to happen to women workers in every class of industry and commerce when our men come home from the war? Admittedly this is a vast problem which cannot be solved in theory; it can only be settled in practice. But that women should seek to keep their posts to the detriment of men who have made such great sacrifices for others is unthinkable. No wonder the pessimist predicts a sex war. But one prefers to think with the optimist, who holds that after the war there will be ample reconstructive work of every type to provide plenty of scope for both men and women.

ENEMY TRADING.

In commerce we have the great problem of enemy trading. And transferring to Great Britain trade which has hitherto flourished in Germany is no easy matter. It will need all our British grit and perseverance; and if women have been able to prove themselves equal to new and unusual tasks—as they have done during the last three years—it is only just to allow them to take their *fair* share in after-war problems.

Take one comprehensive instance alone. In the enemy sample section of the Commercial Intelligence Department of the Board of Trade are some 13,000 examples of different lines of goods manufactured by Germany and Austria. The exhibition includes a considerable variety of jewellery, textiles, hardware, glassware, fancy goods, and miscellaneous articles sent by the enemy into the world's markets, including the United Kingdom.

Almost every one of these samples provide openings for women's work in a more or less degree, and if this *huge addition to pre-war trade* is to be captured, surely there will be room for both sexes to earn a living competency.

For it must be remembered that after the war women will have fewer opportunities of fulfilling their true vocation of wife and motherhood, although there is little fear that the romance of love will be routed from the realm of commerce. Nature sees to this. Vote or no vote, woman cannot get away from the fact that nature has primarily designed her to be the complement of man. The mere fact that a woman has other interests outside home need not necessarily prevent her marriage; and a good business training and even some years in the business world need not necessarily unfit a girl for home life.

If the influx of women into trade and industry leads to State motherhood, so much the better for the nation as a whole.

RESEARCH WORK.

The new habit of industry acquired by women can, after the war, be utilised for the benefit of national commerce. If we can hope to capture a third of this enemy trade, in which previously we had no part, it stands to reason that women must help with their brains and with their ideas.

Sir Alfred Keogh, the chief of the Army Medical Service, where, if anywhere, women have proved their splendid capabilities, sounded a clarion note when, in a tribute to the "magnificent work" achieved by women in war time, he emphasised the importance of "taking women's brains seriously."

The period of transition will undoubtedly be difficult, but nowhere could women be more useful than in the gigantic task we have before us of capturing enemy trade.

In pioneer work highly educated girls with a liking for research might well devote their intelligence to scientific and industrial research work, a branch looked upon by experts as being of the first importance for our future trade development. There is many a process the secret of which would spell success to the British manufacturer. The lines upon which such work might be carried out have been outlined by the Right Hon. Sir Albert Spicer in his very able article on "British Trade after the War," published in "The Globe" of June 20. Scientific and industrial research is one of the many departments of after-war trade development in which women as well as men should be able to do much important and useful work.

June to December 1917

WOMEN IN INDUSTRY.

WHAT IS LIKELY TO BE THEIR POSITION AFTER THE WAR.

Dr. Marion Phillips (general secretary of the Women's Labour League), at a national conference of working-class organisations at Bradford recently, gave a paper on "Women in Industry." She said the big question of the future was what attitude working men were going to take towards women workers when the war was over, and especially what action trade unions were going to take. Trade unions ought to be thinking of what they were going to get. Now many of the old trade union rules provided for the exclusion of women. She could not imagine women consenting to be totally excluded from a large number of trades in which they had found themselves fully capable of doing the work asked of them.

If working men did not recognise that the employers would, and would take advantage of woman's position. After the war there would be a larger number of adult women wanting employment. These women would know quite well they could do the work in most trades; they would know perfectly well that their economic position was stronger when there was a wider field open for them; they would want to get as well paid work as possible, and they would be very determined not to go back to the old scheme of things in which 11s. was the average wage. But between 11s. and the 20s. she had suggested as the present wage point at which most women were engaged, there was considerable scope for the employer in bargaining. That, in broad outline, was the kind of situation that would arise if there was an effort to preserve the old trade union rules which provided for the total exclusion of women.

On the other hand, it was perfectly natural that male workers would see a danger in women's competition. That danger had been dealt with perfectly successfully in the cotton textile industry. There they had got equal pay for equal work. She saw no reason why that principle should not be extended throughout all industry, so that women should not come in without an equality of economic standing. Women ought to be made just the same as men from the employers' point of view.

Much would be said about the suitability of women for particular kinds of employment. She hoped these questions of suitability would not be decided after the war by unions composed of a vast majority of men. These, and cognate questions, should be decided by employment boards constituted of equal numbers of representatives of employers and employed, the latter being appointed by the workers themselves, and including women as well as men.

Finally, she urged that men should take women into partnership in industry, and enable them to stand in just as strong a position as men in the labour market through the trade unions. They should increase in every possible way the facilities for women to join trade unions, and not be jealous of women and insist on rigid rules to exclude women. Whatever happened in the future, they must get the women better organised than they had been in the past.

Lady.
5.7.17.

A notable opportunity for mental stimulus and physical refreshment will be afforded by the Summer School to be held at the Hampstead Garden Suburb during the first two weeks of August (3rd to 17th). Taking for its motto "Where there is no vision the people perish," the Committee, with Mrs. Barnett as president, have arranged a comprehensive scheme by which the main problems of reconstruction, religious, international, economic and educational, can be studied. A notable list of speakers includes the Bishops of Oxford, Lincoln and Peterborough, Sir Oliver Lodge, Lord Burnham, Lord Lytton, Canon Masterman, Principal Selbie, Mr. Herbert Samuel, Mr. J. A. Spender, Mrs. Creighton, Miss Maude Royden and Miss Mary Macarthur. In the arts and crafts section Professor Selwyn Image and Mr. George Clausen are among the speakers. Lectures and conferences will take place daily, and there will be opportunities for relaxation, including an afternoon at Lord Leverhulme's Hampstead house, where his wonderful Chinese porcelain is on view. Tickets are one guinea, and board-residence can be arranged at the Suburb. Miss M. Bolden, The Institute, Hampstead Garden Suburb, N.W.4, will send full programme on receipt of a stamped envelope.

Common Cause 13.7.17 1917 702/89 702

Representation of the People Bill in Committee.

JULY 4TH. CLAUSE 15. PROPORTIONAL REPRESENTATION.

Proportional Representation was again defeated in the House of Commons on July 4th, and is now definitely cut out of the Representation of the People Bill.

The debate was an interesting one. MR. MONTAGUE BARLOW (*South Salford*) moved an amendment cutting out the first sub-section of Clause 15, providing that in a constituency returning three or more members, each elector should have one transferable vote. His chief supporters were SIR THOMAS WHITTAKER, MR. AUSTEN CHAMBERLAIN, and MR. WALTER LONG. On the other hand, the amendment was opposed and Proportional Representation supported by MR. ASQUITH, LORD ROBERT CECIL, SIR JOHN SIMON, and SIR F. E. SMITH.

The main argument on the one side was that Proportional Representation would destroy efficient Government, by weakening majorities, and giving representation to groups of cranks. On the other side, it was contended that it would give "more accurate representation in Parliament to the opinions of the nation, more freedom of members and candidates from undue pressure and more stability to the Government of the country." In spite of the support given to the principle by so many of the best intellects on both the front benches, it was defeated on a division by 201 to 169—majority in favour of the amendment, 32. The whole of Clause 15 then fell to the ground.

PROGRESS DELAYED.

No time is being given to the discussion of the Representation of the People Bill this week. This is probably because not much more progress can be made until the Boundary Commissioners have finished their work.

Planning for the Future.

SOME PROBLEMS OF AFTER-WAR TRADE.

There are hopeful signs that we are trying to overcome our national reluctance to think ahead. Plans for reconstruction after the war are occupying many minds, and, in addition to the Committee appointed by the Government to thresh out these problems, private groups are meeting for discussion and undertaking propaganda.

The creation of a Ministry of Labour to deal with matters affecting labour conditions is a step that has long been needed, and the development of the Board of Trade more on the lines of a Ministry of Commerce should mean that Government will watch over and cultivate markets both at home and abroad to a much greater extent than it has done in the past.

THE AVOIDANCE OF TRADE DISPUTES.

One of the most thorny problems before us is the avoidance of trade disputes. If we are to hold our own in the markets of the world, we must present a united front. Before the war there was great unrest in the labour world, and this is bound to break out again unless the reasonable demands of labour are met; but, at the same time, we cannot expect to compete on favourable terms with other nations if there is any artificial restriction of our output. Both capital and labour must consider the lessons of the war, and be ready to adjust their difficulties in a reasonable spirit.

A Sub-Committee of the Reconstruction Committee has been considering the relations between employers and employed, and recently issued an interim report recommending the formation of joint standing industrial Councils. Each industry, the Committee consider, should have an organisation representative of employers and workpeople, to have for its object the regular consideration of matters affecting the progress and well-being of the trade from the point of view of all those engaged in it, so far as this is consistent with the general interest of the community. The precise nature of the problems that will have to be faced naturally varies from industry to industry, and even from branch to branch, within the same industry, and their treatment, therefore, will need an intimate knowledge of the facts and circumstances of each trade. Such knowledge is only to be found among those directly connected with the trade, and can only be utilised to the fullest extent if the workpeople are given a greater share in the consideration of matters affecting their industry, and employers and employed are kept in constant touch.

CONSULTATION BETWEEN EMPLOYERS AND EMPLOYED.

The Committee recommend that, in addition to the National Councils of the different trades, there shall be formed:—

(*a*) District Councils, representatives of the trade unions, and of the employers' association in the industry, or developed out of the existing machinery for negotiation in the various trades.

(*b*) That work's committees, representatives of the management and of the workers employed, should be instituted in particular works to act in close co-operation with the district and national machinery.

This necessity for more consultations between employer and employed is emphasised in the essays on the Relations between Capital and Labour, in a very valuable volume recently issued, dealing with questions of reconstruction. Writing on the standpoint of labour, Mr. G. H. Roberts, M.P., deplores the state of mutual suspicion and ill-concealed antagonism into which employers and employed were drifting before the war, but rejects the idea that some people are putting forward, of a cruel and widespread class warfare when "cannons cease to vomit and trenches are emptied."

"Having seen the son of the well-to-do and the son of the labourer watching and fighting together in order that their country may remain great and its people free, I cannot think," he says, "they will soon forget the comradeship that inspired them to common endeavour and sacrifice in withstanding the foe, nor that they will sanction lightly the resumption of industrial hostilities."

MUTUAL CONFIDENCE IN SETTLING DISPUTES.

Sir Benjamin C. Brown, writing on the standpoint of Capital, takes the same view. He holds that kindly feeling between Capital and Labour has been much discouraged of recent years by the interference of people who know nothing about the circumstances, and that if employers and employed could feel more confidence in one another, and come together to talk things over in a friendly spirit, a great deal of misunderstanding would be avoided. "Where there is confidence, mistakes are easily explained, and where there is kindly feeling injustices are easily put right." Legislation, he maintains, should be the last resource, and it is a very bad one. "Settlements across a table are friendly, but a Parliamentary fight means victory on one side and a defeat on the other, and bad blood on both. I think the old maxim is safest, "Never win a victory till you have exhausted every chance of arranging a compromise."

THE UTILISATION OF WOMEN'S WORK.

One of the problems with regard to which employers and employed will have to consult is that of the restriction of female labour, and it is to be hoped that in any conference that takes place (whether local or national) fair representation will be given to the many thousands of women who have worked during the war emergency at trades hitherto closed to them. With proper organisation it should be possible to continue to utilise their skill and energy as fully in peace time as in war, and it will be a national loss, as well as an act of gross injustice, if trade unionists insist upon the restitution in their entirety of pre-war rules with regard to women's employment.

In the volume of essays to which reference has already been made, Mrs. Fawcett, writing on the "Position of Women in Economic Life," describes the discovery of the immense reservoir of unused, or only partially used, productive power which this country possesses in its women as "one of the economic events of the war." While recognising to the full the valuable work trade unions have done in obtaining improved conditions of labour, she maintains that in the matter of women's labour they have pursued a mistaken policy, which has had a terribly depressing effect on women's wages—the union being all the greater because it is against the principles of the creed they have professed. "The elevation of the status of labour has been a religion to many of them, but in this matter of women's labour they have 'denied their faith to make their faith prevail.' Forcibly to prevent half the nation from undertaking skilled work is a hideous tyranny, which has kept huge masses of industrial women in a sort of serfage, from which before the war escape seemed almost impossible. Now the wisest and most experienced of the trade unionists know that women have come to stay."

There will, no doubt, be a certain amount of opposition to women remaining on in the trades that they have newly learnt; but it is to be hoped that not only the leaders, but the large majority of trade unionists, will be ready to give them fair play. If, instead of trying to drive women out, trade unionists would insist on equal pay for equal work, regardless of sex, the danger of women being used to lower the prevalent rates of wages could surely be overcome.

Women After the War.

I do not agree with Miss Mary MacArthur when she declares that there will be no sex war in industry after the war. The commercial interests of the two sexes in the labour market will be diametrically opposed to each other, and there will be, I feel sure, keen competition to depress the standard of wages. The determining factor in casual labour will be its cheapness, and not its suitability, and it will never be possible to convince the average woman of the danger of undercutting men in the labour market. So many women have been trained to fill men's places that when the men come back they will not readily surrender the good money and independent position with which the war has provided them.

Scot's Pictorial
11.8.17.

The Workers After the War

It is good to hear from no less an authority than Miss Mary Macarthur that there will be no sex war in industry following the war. So many others have said and believed that the men who return from strife when the war is over will find their places filled by women unwilling to be turned out, and that men who have fought to defend the country and the women cannot be expected to stand that. Miss Macarthur did not state her reasons (or those reasons were not reported in the papers that have come into my hands) for thinking there will be no sex war. The most satisfactory reason, of course, would be that work enough for both men and women might be found, and it ought to be, and will be, found if only we are not content after the war to go back to the old order of things—to buying most commodities from abroad, even from Germany, because we are too lazy or too thoughtless to grow them or make them for ourselves. I, personally, am deadly afraid that most of us will not trouble long to support home industries if we can get "just as good" from other countries. Yet if we do not, the last state of this country will be worse than is the state of Russia at present.

WOMEN AFTER THE WAR.

Liverpool Lord Mayor Invites Suggestions

Some correspondence has recently appeared in reference to the employment of women after the war, one writer going the length of suggesting that the Lady Mayoress should call a conference to consider the subject.

It is recognised on all sides that the matter is one of great importance, and the Lord Mayor desires it to be known that it is engaging the very careful attention of the Liverpool Munitions Committee and the Ministry of Reconstruction. It is not considered desirable to make any statement at the moment, and it is felt that no practical result could be expected from the holding of a conference at the present stage. At the same time, however, the Lord Mayor will be much obliged for any suggestions for dealing with this very important and difficult question

Lady

There have been some gloomy prophecies as to what will happen in the labour market after the war, and some alarmists have even predicted a sex war. The alarmists have been answered by the optimists, who cheerfully contend that there is no danger because women have undertaken men's work only as a temporary measure, and will vacate their posts when the men return. This may be true as regards some women and some jobs, but one feels that the problem will not solve itself in this way. One also feels that the "status quo" would not be desirable, even if it could be restored. The ideal of every country should be to be self-supporting. The war has taught us how very far England has declined from following this ideal. If it is to be pursued there will be no need for women who have found their vocation in certain branches of agriculture and industry to abandon their work, for their support will be needed in the new economic struggle. It is this fact which will avert a sex war in the labour market, especially if women workers combine to resist any attempt to exploit their labour, and to insist on a wage which will not undersell men's work.

WOMEN WORKERS AFTER THE WAR.

CONTRACT TO PROTECT BOTH SIDES.

The Government is taking important steps to safeguard its various departments against a general exodus of women clerks the moment peace is declared, and to protect the future of the women clerks who will ultimately be replaced by male clerks.

To obviate any general exodus at an inconvenient period the women clerks are being asked to sign agreements that they will not leave their employment for at least four months after peace is signed. Every clerk who agrees to this will be given a supplementary bonus when she leaves of between 10s. and £1 for every month of service. It is estimated that the average clerk on leaving will be entitled to quite £20 as a parting gift.

It should not, however, be imagined that the Government is only selfishly thinking of itself. On the contrary, much consideration is being given to the problem of what is to become of the women clerks when the State no longer requires them. However useful the women may have been, there will be a great cutting down of national expenditure after the war, and these clerks will then have little opportunity of commercial employment.

The solution favoured by the State is emigration to the Overseas Dominions, and in due course a plan may be expected by which every assistance will be given to the women to go to places where they will benefit themselves, their new home, and the Empire.

An important step in this direction is in the encouragement of study. There are many girls under sixteen in State departments who do the hundred-and-one odd jobs usually performed by the junior clerk. Henceforth, these girls will have to go regularly to night school. In the continuation classes they have to attend they will be discouraged from learning shorthand and typing, but instead will be taught such practical womanly subjects as will fit them for a new creative life in other climes.

Birmingham Post

THE POSITION OF WOMEN IN INDUSTRY.

AN AFTER-WAR PROBLEM.

Sir Arthur Steel-Maitland, M.P., who has been appointed an additional Under-Secretary for Foreign Affairs, and an additional Parliamentary Secretary for the Board of Trade, a joint office of the two departments for dealing with foreign trade and commerce, presided last night at a meeting, held at Queen's College, Birmingham, under the auspices of the National Union of Women Workers. The object of the gathering was the first of three lectures on the subject of the "Past Present, and Future History of Trade Unionism for Women."

Sir Arthur said a consideration of the subject before the meeting was due, and really overdue. In the first place, Birmingham was a great town for the employment of women, and in a rather different way from the Lancashire manufacturing towns. There there was a great number of women in one particular employment, whereas Birmingham was an important place for many diversified employments for women. Even before the war the question of women's employment was one of the most complex and difficult parts of the whole of modern industry. He would not attempt to analyse the reasons for the state of wages and disorganisation of women in industry which then prevailed, because the causes were tolerably well apparent to anyone who knew the subject. At any rate, before the war the position of women in industry in this country was not satisfactory, and it badly needed setting to rights.

A Changed Situation.

With the coming of the war the whole situation had taken another complete change. With so many men diverted to fighting and to other purposes, the need for women workers had been increased manifold, and instead of there being a glut of women workers there was now a great demand for them. It had been found from the experience of the war that women had been able to do work which formerly was reserved for men. Not only so, but the substitution of new kinds of machinery for old in many of the engineering works had enabled a certain amount of work to be done by women with the new machines which probably could only have been done by men on the old machines. The result was that after the war the problem would be quite different from what it was before. That was his reason for saying that the subject was well worth considering now, so that they might have a better knowledge of where they stood in regard to the matter. After the war there was bound to be a good deal of dislocation in the country, inasmuch as when the men returned some industries would stop and others would be starting work again. The amount of dislocation and hardship that would be entailed would depend a great deal on the measures taken to meet it, and on the understanding and intelligence of the people generally who would be affected or who could influence the people who were affected. He believed that if there was goodwill not only could the production of this country be immensely increased as compared with what it was before the war, but as part cause and part effect of it, the share of the people who were underpaid before could be made, as it ought to be made, a great deal better. For all that one needed goodwill and understanding, the goodwill to try and set in motion, for example, a scheme like that proposed by Mr. Whitley's Committee. (Applause.)

Miss Dawson then delivered an address on the

authority than Miss Mary Macarthur that there will be no sex war in industry following the war. So many others have said and believed that the men who return from strife when the war is over will find their places filled by women unwilling to be turned out, and that men who have fought to defend the country and the women cannot be expected to stand that. Miss Macarthur did not state her reasons (or those reasons were not reported in the papers that have come into my hands) for thinking there will be no sex war. The most satisfactory reason, of course, would be that work enough for both men and women might be found, and it ought to be, and will be, found if only we are not content after the war to go back to the old order of things—to buying most commodities from abroad, even from Germany, because we are too lazy or too thoughtless to grow them or make them for ourselves. I, personally, am deadly afraid that most of us will not trouble long to support home industries if we can get "just as good" from other countries. LABOUR POLICY AFTER THE WAR.

By the Right Hon. J. H. Thomas, M.P.

If there is one thing more than another that the war has proved, it is the folly of posing as a prophet. I do not propose, therefore, to attempt any such rôle with regard to the situation after the war, but shall simply express my personal views on the various matters mentioned, and show, as far as I can judge, the tendency of events.

Turning first of all to the political side of the Labour movement. Now there can be no doubt that a very serious effort will be made to broaden the basis of our organisation, so that full advantage might be taken of the new franchise to strengthen the position of the party both inside and outside Parliament. Of course, I am well aware of the many and varied attempts now being made to establish new parties, and that baits of all kinds are being offered to Labour; but I feel quite satisfied that the end of the war will find the Labour party an independent and distinct political entity.

We are frequently told that the war has removed or broken down the party barriers, and that peace will find politics divided into entirely new camps, but that I very much doubt. That all parties will be compelled to reconsider their programmes and policies may be true, and, indeed, the terms of peace will play a very important part in this matter, especially on the question of armaments, but the idea that the party spirit is dead is pure imagination. Apart, perhaps, from a few small groups, the great Liberal and Tory parties will remain, but the Labour party will grow in strength and influence at the expense of both, and will broaden out as a national party.

The Transition Period.

In my opinion the most difficult time we shall have to face will be the transition period, when, in as short a time as possible, industry will have to change from war to peace. This operation will mean that several million soldiers and munition workers will have to be transferred to new occupations compared with those which they have followed during the past two or three years. It may conceivably happen that many men will return to find themselves competing with others for a job. Naturally, the first question they would ask would be, "Is this what we have been fighting for?" With the memory of what they have already suffered and the sacrifices they have made, they would be faced with the prospect of unemployment and further suffering. A very serious state of affairs would then arise. Therefore, at all costs, efforts must be made to deal with this position in such a way as to avoid unemployment and prevent distress.

It is here that Labour, with a constructive policy, can be of great assistance. The Triple Alliance, composed as it is of the miners, the transport workers, and the railwaymen, have already placed before the Government a scheme dealing with the whole question, which included the demand that all workers should be provided with employment at standard living rates or with full maintenance by the State.

One of the first questions that will be raised at the close of the war is whether the present war wage or war bonus shall remain. I think it will, for two reasons. First, the cost of living is not likely to drop for some time, and it is on this that the war increases have been based. Therefore any attempt to bring down the war increases would be strongly resisted on this ground. Secondly, there is universal agreement among the ranks of labour that the workers must in the future aim for a higher standard of life, and that they will not be satisfied with the pre-war standard. This applies not only to rates of wages but also to hours of labour. Speaking for my own organisation, the National Union of Railwaymen, it may be taken for granted that our demand for an eight-hour day for all grades of railwaymen will be strongly pressed. Here let me observe that the future will not see so many sectional disputes as there were before the war. The great change from sectional and craft unions to national industrial unions will make our movements more national than has been the case hitherto.

To Avoid Strikes.

The question arises: If Labour intends to make a fight for improved status—that is, not only [illegible]

Morning Advertiser
26-11-17

WORK AFTER THE WAR.

THE POSITION OF WOMEN.

The fourth of a series of addresses under the "Fight for the Right Movement" was given at the Æolian Hall, New Bond-street, yesterday, by Miss LENA ASHWELL, who spoke on "Women's Work Before and After the War."

She declared that the whole question of women's work was a staggering one, and difficult to deal with. She emphasised the great difference between the weekly wages of men and women which existed in pre-war days. The average wage of a woman worker in 1912, according to a Board of Trade return, was 10s. 7d. Apart from wages, many trade unions did not admit women to membership, nor were they permitted to practise in the higher professions. A great awakening was needed to change these conditions.

With regard to war work, Miss Ashwell said that in France a much better feeling existed between men and women engaged in making munitions than was the case in this country. If, at the conclusion of the war, she said, greater numbers of women were to be engaged in work, attention would have to be given to measures which would make them efficient workers. The home life could be improved by the establishment of communal kitchens; creches should be taken over by the State, and under the new scheme of education nursery schools would be organised. She trusted that the nursery schools would be used by all classes of the community.

Equal pay must be given for equal work, and after the war there should be no barriers to women or to anyone getting to the top, whatever the work or the profession might be. She believed there would be abundance of work for all, and there ought to be no poverty, for there was plenty of money to go round.

putes as there were before the war. The great change from sectional and craft unions to national industrial unions will make our movements more national than has been the case hitherto.

To Avoid Strikes.

The question arises: If Labour intends to make a fight for improved status—that is, not only increased wages and shorter hours but a voice in the control of their employment—will it result in a period of strikes and lock-outs? I hope not; but all will depend upon the spirit and manner in which the question is approached. The Whitley Report on Joint Industrial Councils provides a basis for the establishment of machinery in every industry. The Government would be wise to use all its influence and power to urge employers and trade unions to meet and establish machinery at once, and face the many problems that await solution. My views on strikes are well known. I believe they should always be the last and not the first resort. If proper machinery is set up and every question is subject to discussion between both sides as it arises, then a strike would be recognised as a national danger, and the absolute necessity of averting it would be appreciated by both sides.

These remarks, of course, are based on the assumption that the difficulties will be between private employers and their employees. I am, however, not unmindful that there are several industries at present under Government control, and labour will oppose them reverting to their private owners. In particular I am referring to the railways and the mines. These are essentially national services, and our demand will be that, just as the State has found it necessary to control them in a time of national crisis, so it would be in the nation's interest that the State should not only retain control but should also take over the ownership.

The Women Workers.

These are only a few of the many problems before us in which Labour is specially interested, but they indicate some of the difficulties that lie across our path. Whilst in the past nationalisation has been opposed by the shareholders, our experience during the war, and the difficulties ahead, such as the cost of materials and labour, are in themselves reasons why many will change their attitude. Equally, however, Labour is watching the danger of the State being saddled with industries bought at a price not justified by their value or the current market price, and therefore imposing a burden on the people. Thus it will not only be on the question of transfer from private ownership that the fight will come, but rather on the terms and conditions on which the bargain is struck.

Another important question is that of the position of women workers now engaged in industries which have hitherto been closed to them. Whilst in some cases, as, for example, the railways, we have an agreement that the women shall not prejudice the return of the men who are fighting our battles and whose places they fill, yet we must recognise that in many industries women have come to stay. The only safe course to follow is to insist that wherever women are employed doing men's work they shall receive men's pay. This, in my opinion, is the only way whereby the standard conditions may be maintained. Any attempt to treat women as they were treated before the war would, in my judgment, be disastrous.

Daily Express 2.-11.-17.

MARRIED WOMEN AND THE WAR.

NEW AMBITIONS SOWN BY REGULAR INCOMES.

By W. L. GEORGE.

The powerful influences now at work on all women will peculiarly affect the position of the wife. She will, of course, benefit and suffer exactly as will her single sisters, and come up as they will against male labour; she will find her status raised by the growing realisation of her importance in the State, and absorb political education like the male voter. She will, however, feel certain effects from which the single will be free. Notably, her state of mind will have been altered, in millions of cases, by having for three or four years enjoyed a *fixed and regular* separation allowance instead of a precarious share in her husband's wages.

That is a greater influence than might be thought, for the regular income is now a habit, and I doubt whether the new women voters will submit to the old state of uncertainty. They seem to me much more likely to throw in their vote with the Labour party, and to demand the "Right to Work" Bill, with its 30s. a head all the year round—and who will think it fair to say them nay?

GAIN OF POWER.

It would be neither fair nor safe, for many married women have gained power as leading hands and shop forewomen; indeed, in one case known to me, a woman is now assistant manager of a factory, and controls nearly 2,000 women—and men. All this has sown a seed of ambition that will flourish as the green bay-tree.

This does not mean that more married women will enter factories, nor that they should be encouraged from their homes, though many of the childless are available. Close on 100,000 additional marriages were registered in 1915, but the birth-rate is slowly falling, and so there is nothing between labour and many married women. I believe, however, that their drift will be away from, rather than to, the factories, owing to the rising cry for population.

This cry is largely based on cant, for those who demand children offer neither security of food nor comfortable houses, but time and necessity will kill cant and bring about a swift movement for an increased maternity allowance. This is now 30s.; I believe it will rise to at least 10s. a week for ten weeks; I believe, too, that the feeding of school children will become compulsory, while a popular care movement enlists a vast number of wives, to replace some well-meaning but untaught spinsters.

That will be a liberating movement which will relieve from factory work many a married woman and release her for the care of a home less miserable and exacting than the one she knows today.

Birmingham Post. 5.-11.-17.

WOMEN AND AFTER-WAR EMPLOYMENT.

To the EDITOR of the DAILY POST.

Sir,—Your correspondent of October 29, in his justifiable anxiety that the claim of the returned soldier to his place in industry should be clearly recognised, loses sight of the fact that male civilians occupy with regard to him the same position as women workers.

Granting that the soldier's claim should be put above that of everyone else, is it fair that women should be driven wholesale out of the industries in which they have entered, while men who obtained exemption from the Army are left free to retain any work which the abnormal labour conditions prevailing in war time have enabled them to get?

Would it not be better, the just claims of the returned soldiers satisfied, to allow the rest of the population free competition, with efficiency, not sex, as its basis? By insisting on the principle of "equal pay for equal work" the interests of the workers would be safeguarded, inasmuch as it would then be impossible for a man to be supplanted by a woman simply because her labour was the cheaper.

OLIVE A. JETLEY.

National Union of Women's Suffrage Societies,
London, S.W.

Outlook 17-11-17

renewals delayed, and with the wastages of war to make good, there will be a great trade boom after the war—an enormous volume of employment available for both women and men—and the problem before us is not how to drive our new women workers out of industry, but how to regulate their conditions of employment.

The end of the war will find us with more skilled labour than ever we have had before, and with intelligent co-operation between capital and labour and the State we could so increase our trade that the whole of this skill could be adequately employed, and at good wages, when the world calls again for its usual quantities of manufactures, plus the extra quantities needed to make good the war losses. It is not a trade depression, but an unprecedented boom, that we should be wise to prepare for—a boom in which we shall need the services of every worker, male and female, to enable us to take the largest possible share of the world's trade and re-establish our own economic position.

One of the absolutely certain results of this German-made war will be a hugely increased demand for British-made goods. Germany, hitherto our greatest rival, has hit and offended all her best customers, with the exception of Austria. Our Colonies and Allies will call for British instead of German products. Our shops will not in future be filled with German goods while our own men are unemployed. Germany will suffer a world-wide boycott. Here it is important to remember that in manufactures America, Britain, and Germany are the world's leading countries—in fact, they are the only really great manufacturing nations. With one of these out of the race—financially bankrupt, her competitive powers weakened, and her goods and agents shunned by the bulk of mankind—it follows that the available trade will stand to be shared by the other two. In future the race for commercial supremacy will be between Britain and America, and in that competition we shall obtain all the trade our works and workers can undertake. The United States of course has a larger productive capacity in most trades than the United Kingdom; but America cannot beat this country in neutral markets, save in case of one or two special lines, because in that country the mineral deposits —the coal and iron—are about 1,000 miles apart, and the manufacturing plants are mostly between 400 and 500 miles from the coast—a big geographical handicap—besides which wages are abnormally high in America. All the same, we shall find the United States, and not the United Kingdom, getting the lion's share of the trade Germany will lose if we do not maintain a high productive capacity and rate of output. We are bound to get all the business we can do. We can obtain abundant employment for our people, with America taking the overflow of neutral trade.

To those who imagine that Germany will return to the competition with her old fierceness and success—that in spite of the disrespect she has created she will beat us by offering her goods at prices we cannot touch—it may be pointed out that German progress in the past has been due largely, if not mainly, to a set of artificial factors and forces that can hardly exist after the war. It may be said that the very mainspring of German competition has been subsidisation, and for decades, if not generations, German finances will not be in a state to afford the lavish subsidising of exports that characterised the competition of the last fifteen years before the war. Not only will German industries lose about two millions of their men, but they will lose the generous State subsidies, bankers' credits, and syndicate bounties which have hitherto enabled them to sell their goods abroad so cheaply.

It has not been cheap labour or cheap production that has been the secret of German success in foreign markets, but subsidisation. Germany's coal is not quite so good as ours, and it is more costly to mine. Her iron ore is inferior. The minerals are deposited far apart, whereas ours are practically side by side. Again, all their manufacturing plants are far inland. We have our coal, our iron supplies, our works and shipping ports all conveniently situated. Moreover, it is quite a mistake to imagine that low wages have industry takes a new lease of life. We need fear no great unemployed problem after the war. Our trade unionists need not fear the competition of unskilled labour, male or female.

F. T. GOOD.

Author 17-11-17

renewals delayed, and with the wastages of war to make good, there will be a great trade boom after the war—an enormous volume of employment available for both women and men—and the problem before us is not how to drive our new women workers out of industry, but how to regulate their conditions of employment.

The end of the war will find us with more skilled labour than ever we have had before, and with intelligent co-operation between capital and labour and the State we could so increase our trade that the whole of this skill could be adequately employed, and at good wages, when the world calls again for its usual quantities of manufactures, plus the extra quantities needed to make good the war losses. It is not a trade depression, but an unprecedented boom, that we should be wise to prepare for—a boom in which we shall need the services of every worker, male and female, to enable us to take the largest possible share of the world's trade and re-establish our own economic position.

One of the absolutely certain results of this German-made war will be a hugely increased demand for British-made goods. Germany, hitherto our greatest rival, has hit and offended all her best customers, with the exception of Austria. Our Colonies and Allies will call for British instead of German products. Our shops will not in future be filled with German goods while our own men are unemployed. Germany will suffer a world-wide boycott. Here it is important to remember that in manufactures America, Britain, and Germany are the world's leading countries—in fact, they are the only really great manufacturing nations. With one of these out of the race—financially bankrupt, her competitive powers weakened, and her goods and agents shunned by the bulk of mankind—it follows that the available trade will stand to be shared by the other two. In future the race for commercial [illegible] world's stocks of manufactures run down, with repairs and [illegible]

The difficulties however will not be so formidable as our Labour men anticipate, whilst the problem may be pretty nearly solved in advance if our trade unions, employers' associations, and the Government will face the matter fairly and squarely and in good time. With the

WOMEN AND TRADE AFTER THE WAR.

TRADE UNIONISTS are seriously agitated over the question of employment after the war, especially as their own position will be affected by the large numbers of women who have taken up industrial occupations and are acquiring considerable degrees of skill. Without a doubt, many of these women will be reluctant to relinquish their new situations and independence, and many of their employers will not wish to lose their services when the war is over. This not only raises delicate questions of trade union organisation and pay rates, but the problem of employment for the millions of men who will be released from the Army and munitions-making.

The difficulties however will not be so formidable as our Labour men anticipate, whilst the problem may be pretty nearly solved in advance if our trade unions, employers' associations, and the Government will face the matter fairly and squarely and in good time. With the

played any part in German progress, so far, at any rate, as the heavy trades are concerned. Twenty years ago a delegation of our own iron trade employers reported that German wages were practically "on all fours" with ours. Since then, it is well known, wages have risen much more in Germany than in this country. No, it is not cheap production that has enabled the Germans to sell cheaply.

The German Government has carried goods for export on its railways at half, and less than half, the ordinary rates. It has paid special subsidies to German ships carrying German goods. The Consular Service has been specially worked in the interests of the manufacturing industries. The banks have given most lavish assistance to exporters. The trade syndicates have worked an export bounty system that has been one of the marvels of the commercial world. In the future it will be impossible for Germany to subsidise her exports to anything like the old extent. Add to that the boycott she will suffer, and her appalling loss of manpower, and it will be seen that German competition cannot be so strong in the future as it was in the past. British industry takes a new lease of life. We need fear no great unemployed problem after the war. Our trade unionists need not fear the competition of unskilled labour, male or female.

WOMANHOOD AFTER THE WAR

By Cicely Hamilton

MISS CICELY HAMILTON, the recognised authority on feminist topics, suggests that the effect of the war upon the next generation will be bad because, with the flower of young manhood gone and the strength of young womanhood overtaxed, the children born within the next few years may be a nervous type. She anticipates a temporary revival of femininity, as distinguished from feminism, adjusted later by economic pressure and habits of labour and self-dependence formed during the struggle. Elimination of superfluities of life will tend to result in less worry and better health.

I HAVE been asked to set down in black and white a forecast of the physical effects upon British women of the conditions brought about by the war. Such a forecast, in the nature of things, can be only tentative—in many respects but a guess. It is true that one can put one's finger on certain definite results of war conditions; can say with assurance that there are at this moment large numbers of our woman population who are better clad and better fed than they were when male labour was plentiful and separation allowances for soldiers' wives were as yet beyond the horizon.

That, for the time being, is a definite gain to health. But as the struggle drags on, so food will be dearer and scarcer—while peace, when it comes, may bring harder times instead of the proverbial plenty. With equal certainty one may set it down that an appreciable number of women (especially young girls) are overtaxing their strength at unaccustomed forms of labour in their sturdy efforts to fill the places left vacant by their brothers in the trenches. The nation in its need has called on them to do their utmost, and, so long as the need of the nation is extreme, the effect upon their health of unduly long hours is a minor consideration.

Minor it may be, but none the less it is serious. The pick and flower of our manhood went first to the war, and has given its blood more freely either than those rejected on physical grounds or those who "waited to be fetched." Much of what is soundest and finest in man has died before its time, and left no son behind it; if the next generation is to have its chance, its mothers should be healthy and well balanced.

I have heard that the French "war baby" of 1871 developed only too frequently into a markedly nervous type. If that was the case, the evil is bound to be repeated in our time on a scale incomparably greater. From the point of view of the generation yet to come, it would be well, when overwork there must be, that older women were strained and "scrapped" in health. But war, like the minotaur of old, devours by preference youth, and through youth it strikes at the unborn.

[Elliott & Fry

Miss Cicely Hamilton

The above are some of the more direct and instant results of war upon the physical conditions of women. It seems probable, however, that some of the most important and permanent changes will be produced indirectly; that the daily life and habits of women as a class will be affected, and strongly affected, as a result of a change in their mental attitude and estimate of their own position.

Probable Revival of Femininity

In this connection we have to ask ourselves: What sort of a tradition will women as a class bring out of this greatest of all wars? For tradition means moral habit and outlook on life; and if our outlook on life, our attitude towards ourselves and the social system has not been in any way modified by the experience we have been through, no permanent change will be possible. Without it, woman in the mass—perhaps grumblingly, perhaps willingly—will relapse into her former ways.

On the whole, that does not seem likely in this generation. She may wish to relapse, but the fates will be strongly against her. No doubt war-weariness will bring its reaction, and I expect to see in the very near future a pronounced revival of femininity—a very different article from feminism. Such a temporary revival of fluffiness, of appealing dependence, of the Dora Copperfield, child-wife, kittenish type, would be a natural result and product of the strain through which we are passing.

Counteraction of Economic Pressure

The world since August, 1914, has indulged in an orgy of masculinism. This statement is not intended as a reproach to the male sex, which, as these two years and more have shown, holds no monopoly of the stubbornly combative instincts. Man and woman, we have put our backs into the war; and, man and woman, we are sodden with blood and brutality—blood and brutality have almost lost the power to horrify. When the swing of the pendulum comes, as come it must, both man and woman, for a time at least, will turn and take pleasure in brutality's opposite—an exaggerated, childish femininity.

Probably the phenomenon will be of short duration; probably, also, it will be confined to a limited class, the class of the well-to-do, of those who can afford to be useless. In every other section of society the tendency will be counteracted by economic pressure, by the need to work—and work hard—for self or children. And economic pressure, in its turn, will be seconded by habits of labour and self-dependence acquired in the years of struggle.

One thing at least is certain. The tradition that the average woman will bring out of the war will not be the tradition of a life lived only as the helpmeet and dependent of her husband. That estimate of her place in the world was old-fashioned before 1914, when husbands were more plentiful than they will be for years to come; it survived only by favour of the sentimental and autocratic instincts of the human male and the laziness and inefficiency of large sections of the human female.

Laziness and the autocratic instinct, no doubt, we shall always have with us; but not while the present generation endures will they be able to stifle the inexorable fact that women have been called on to aid the nation in its need—not by gentle persuasion and the homekeeping arts, but by downright, straightforward employment of brain, muscle and intelligence: called on, not as wives and mothers, but as personal hands and brains. What we prize in the war-time woman is hard sinew as well as hard sense; the capacity to think steadily and sweat for long hours without dropping is of more value to a nation in its agony than much sweetness of coaxing manner or much talent for dainty dress.

In the hour of our trial we have taken stock of our resources and stopped the customary wastage of women's good brains and good bodies. Necessity, a law unto itself, has swept aside those lesser laws which forbade the employment of women in certain trades, which condemned as unwomanly certain forms of physical activity. We have found out that strength is strength, whether clad in trousers or petticoats, and that shells are shells whether turned out by women or by men. One forgets the proprieties when the enemy batters at the gates.

[Continued on page 580

WOMANHOOD AFTER THE WAR (Contd. from page 578)

No doubt, when the enemy ceases to batter, the proprieties will come back in part. Certain callings and forms of physical activity are obviously more suited to the average man than they are to the average woman, and in normal conditions would tend to be monopolised by man. But what has been has been; woman in war-time has been praised and prized for qualities once held to be unfeminine, and the old spirit of taboo has passed while the war and its works are remembered.

In estimating the influences that have been brought to bear on the average woman, it must not be forgotten that she has seen many of her duties, once held to be of paramount importance, decried and derided as useless, and fallen in public esteem. Domestic service, paid or otherwise, the employment of household labour in the person of one's servants or oneself—has been recognised in war-time as largely a luxury trade; and just as it is an offence against the nation to keep unnecessary servants, so it is an offence against the nation to multiply the little home wants and the little home preoccupations that were once an admired and essential part of the life of a housekeeping woman.

Benefit of Open-Air Work

The housekeeping class will always form a large proportion of the nation's womanhood, and it will mean much to such a class that it has learned to distinguish between the essentials and non-essentials of a decent home, that it has learned to curtail and simplify its formerly multifarious duties. Even in very modest households an incalculable amount of feminine energy is usually wasted upon the fidget of petty display; a general standard of less pretentious living will mean less expenditure of energy, more time, less worry, better health.

Physically, the nation should benefit by the fact that the number of women working at open-air callings has increased during the war. The field-working, horse-minding, van-driving girl will tend to belong to a hardy race with an open-air outlook on life. The woman who puts her back into a day's good gardening or farmwork could not, if she would, have the same views and manners as the girl whose place is the home, or whose work is sedentary. Her ideals are different, even her ideals of beauty; she admires the grace that is strong and free-stepping, not the grace that is dependent or childish.

Restoration of the Balance

Naturally, this type—the product of the upper and middle-class British woman's predilection for sport and exercise—existed long before war with Germany was thought of; all that war with Germany has done is to increase its numbers and spread its characteristics through classes other than those with opportunity for sport. This is all to the good, for two reasons. First, because the out-of-door woman will be more robust than her sedentary sister, and therefore suffer less than her sister from the prolonged anxiety and nervous strain of the war; secondly, because her training and habits will probably render her immune from the approaching attack of fluffiness and ultra-femininity. She will act as femininity's counterpoise and bring back the balance to the normal.

LABOUR RIGHTS.

THE RESTORATION PLEDGES.

LONDON, FRIDAY.

The Labour Conference, at its final session in the Central Hall, Westminster, to-day, scrambled through the consideration of a detailed scheme of reconstruction. Over a score of elaborate resolutions were carried after a discussion of from five to ten minutes on each. The speeches were severely limited so as to enable the Conference to finish its business, with the result that there was no adequate discussion of any one subject.

Mr. Philip Snowden, M.P., who was down to move an important resolution on national finance, refused to occupy the minutes allowed to him, saying that he could not possibly deal with the subject in the time. This state of things was the result of giving up so much time on the previous days to the controversial subject of the party truce and to the various Kerensky episodes.

The note of many of the speeches on the restoration of peace conditions in industry and on promised reforms was a scepticism as to Government pledges. Mr. John Hill, for instance, in moving a resolution on the restoration of trade union conditions, questioned whether the Government really meant to fulfil their promise of strengthening the Munitions Act in this direction.

Another resolution passed without discussion laid down a far-reaching programme for the prevention of unemployment after the war, including a big provision of public works to absorb labour. An improved State scheme of insurance for temporary unemployment was demanded.

Emancipation of Women.

A biting speech was made by Miss Mary Macarthur, who brought forward a series of demands for the complete industrial and civil emancipation of women. She drew attention to the dismissal of 40,000 women munition workers at short notice just before the March offensive. Although the Ministry of Munitions had been aware for six weeks that these dismissals were going to take place they had never informed the Ministry of Labour, and in some places over 1,000 women were dismissed without the local labour exchanges knowing anything about it, so that no provision was made.

Such action as that, she said, makes us rather cynical about the praises showered on women workers. They are good enough to be praised when their work is wanted, but they are only good enough to be turned on to the scrap heap afterwards. She asked what had become of the Government pledges of 1915 on the subject of equal pay for equal work. Women had not shared in the war advances granted to men workers. It might be said that women were receiving double the sweated wages of before the war, and that men had dependents.

Admitting that, the fact remained that if men were going to allow women to undercut them and women to allow themselves to be exploited to cheapen production, there would be a disastrous state of things in industry. The vote was conceded to women on the ground of their services in the war, yet the Representation of the People Act excluded the vast majority of women war-workers.

The restoration of complete personal liberty was demanded as soon as the war ended. Speaking on this subject, Mr. W. C. Anderson, M.P., issued a warning about industrial conscription. Men of the older classes who were being called up and graded "one," although admittedly not for active service, were not to be sent into the firing line, but these men believed that they were going to be sent there, and they were being told that if they would place themselves absolutely in the hands of the authorities to be used in industry they would be exempt from military service. That, he said, was simply industrial conscription, and a most serious menace to trade unionism and organised labour.

The Irish Problems.

There was a momentary flash of emotion in the speech of Mr. James O'Grady, M.P., on Home Rule for Ireland. "Don't," he said, "let the English have to go to the Peace Congress and be compelled by foreigners to concede justice to Ireland." Mr. Jack Jones followed by a spirited attack on Sinn Fein and separatism generally from the patriotic point of view.

Some delegates objected to a proposal to support Parliamentary decentralisation on the ground that it would interfere with the internal solidarity of Labour. Mr. Henderson reminded the Conference that it would be a tactical blunder to reject devolution. At the next election they would be running candidates in Wales and Scotland, and the party must not set itself in opposition to the national sentiment of those countries. The business of Labour was to capture the separate legislatures that would be set up, and to see that Labour legislation was uniform and progressive.

Very cursory attention was given to reconstruction programmes on education, housing, the abolition of the Poor Law, temperance reform, railways, coal mines, agriculture, and national finance. A woman delegate in khaki uniform held the attention of the Conference for a few minutes by a vigorous plea for proper payment to teachers, many of whom, she said, were paid less than the minimum laid down by the Ministry of Munitions. A delegate from the electrical trade unions discoursed freshly on the proposal in the programme for a State system of power supply, which Mr. Sidney Webb said would be one of the big changes of the immediate future. The Government should establish a score of gigantic super-power stations by which the whole kingdom could be supplied. A strong protest was made against allowing new electrical supplies to fall into the hands of private capitalism. The State was urged to take over the whole business of life assurance.

Mr. G. H. Stuart Bunning described the present system as cruel, lifeless, and inefficient. It overcharged the worker when he was alive and frequently cheated his dependents when he was dead. It enabled the big corporations to make huge profits. They invested large sums in Government investments, and then thanked God that the company was winning the war. (Laughter and cheers.)

August 1918. 702/96 702

The Electrician. 16. 8. 18.

Contract Prices During Demobilisation.

The following is an account of a discussion which took place before the Manchester Local Section of the Institution of Electrical Engineers on Capt. Digby's Paper on the above subject. An abstract of the Paper appeared in THE ELECTRICIAN of Aug. 9.

The Chairman (Mr. C. J. BEAVER) said that the paper should receive just as efficient a discussion as that usually given to technical papers. This paper was exclusive to Manchester, but in London it had been arranged that a Committee should discuss the whole subject, with the object of determining what action the Institution shall take to promulgate the views of the Author.

Mr. FRANK WALKER agreed that the subject of costs and selling prices and their adjustment in accordance with the fluctuating conditions was of vital importance. The statistics given in the first and second sections of the paper, while of interest, could not be of national service. The campaign lasted only about 6 months, and the French indemnity was paid within 3 years and would not pay for one week of the present war. So great and complex were the forces at present involved that any forecasting of conditions after the war must be attended with a large element of uncertainty. After the war the cost of labour would remain high, while costs of the main materials presumably would be kept stable for a reasonable time by Government control. Much work ordered before or during the war would remain to be executed after its termination. The speaker referred to four phases of the problem, viz.: (1) Adjustment of basis selling prices concurrently with changing costs; (2) Alterations in cost that occur during execution of contracts; (3) After the war completion of contracts now deferred; (4) Machinery for regulating contract prices. The speaker then proceeded to discuss labour costs in some detail. In considering the cost of labour it was necessary to take into account not only the actual rate of pay, but also the quantity of work produced. Care must be exercised to include not only productive labour booked to the job, but also labour included in material, in drafting and erection, and in "oncost." "Standing charges," such as rent, rates and insurance, constituted actually only a very small proportion of oncost. Oncost expenses had increased equally with, if not more rapidly than productive labour. The following table showed three sets of increases in labour rates due to Government Awards:—

	Aug. 1914	Jan. 1917	Jan. 1918	Total increase ÷ by 0·9
Skilled day workers	39/-	46/-	66/4	73/6
Comparative %	100%	118%	170%	189%
Unskilled day workers	21/0	28/0	46/2	51/2
Comparative %	100%	133·3%	219·5%	244%
Women day workers	15/0	19/8	30/0	33/4
Comparative %	100%	132%	200%	222·2%

Thus the increase during 1917 was more than double the total increase during the previous war period. The last column showed present-day comparative costs, assuming the output per man-hour reduced to 90 per cent. of its pre-war value, which probably represented a maximum ratio of output since the rush of recruitment in the first 6 months of the war. The cost of wholly or semi-finished parts, brought outside, or even made on "side orders" in the manufacturer's own works. Similar rapid increases have occurred in "raw materials," though stability in the prices of the metals mentioned has been effected and maintained by Government control. Owing to these increases the actual manfacturing costs during war had greatly exceeded the estimated amount on which the contract prices were based, so that losses had occurred on work already completed or still in progress. Similarly home and export contracts made before and during the war totalling millions of pounds could only be completed at costs exceeding the estimated costs not infrequently by as much as 100 per cent. The question of responsibility for this great excess cost was of great importance. Examples of the sliding scale suggested by Capt. Digby were the purchase of coal according to its calorific value, the variation of charges for electrical energy according to the price paid for coal, and the sale of large electrical machines and surface condensers subject to variations in the current prices of copper and of condenser tubes and plates. The extended application of this principle should be practicable where the quantity of any one material included in the product is sufficient to warrant its use, but this condition did not often apply to electrical and allied apparatus. During the last few months manufacturers had adopted the variable price clause, the essence of which was that "for each one shilling per week by which the rate of labour is increased by authorisation of the Government the contract price shall be increased by an amount corresponding to 1½ per cent. of the contract value or pro rata. Such increase in the contract price is to be in the same proportion as the unexpired period of the contract is to the total contract period." A considerably greater percentage would, however, be necessary for use in connection with pre-war costs.

Mr. STUBBS said that in regard to the terms under which tender prices may be adjusted provision should be made for adjustment as from the date of the tender and not from the "date of contract," which might be a month or two months or even more. Another case where the date was important was in relation to the Priority Certificate. From his experience he agreed that the increase in wages paid had exceeded the increase in the family food budget of all save the middle classes. In fact, he believed that the standard of consumption had risen.

Mr. S. L. PEARCE agreed that it would be necessary for the functions now exercised by the Priority Department of the Ministry to be continued by a Priority Department of some other branch of the Ministry. An extension of the sliding scale would have its advantages, but also its limitations. All articles could not be subjected to a sliding scale, and if contracts were formulated on that basis there could not be any very great divergence in the prices that would be submitted by different firms. The tendency would be practically to drive all manufacturers of a certain class of electrical goods into an association. A system of contracts on a sliding scale would have to be made compulsory. It would have to apply to all or else the aim of the author would not be secured. Whilst prices had gone up something like 80 or 90 per cent. or even higher, the price of electrical energy had not gone up in anything like the same proportion.

Ald. WALKER said that many tenders now contained a clause giving a very short period of acceptance. By this means the manufacturer could compel the purchaser to decide within a reasonable period instead of delaying for months, during which prices would change. A purchaser might prefer a firm price to an indefinite sliding scale. That would entirely depend upon whether all the components affecting the price were brought into the scale. The author specified "rates prevailing in the tenderer's district." That apparently would penalise certain districts where wages were always high. Other counteracting factors must also be considered. The inevitable result of the adoption of the sliding scale system would be the bringing together of the manufacturers, but this might be an advantage. The purchaser could prevent it being carried to an extreme degree. The scheme would be well worth consideration, but would have to be considered by a Committee representative of all the interests concerned. Various points would arise. For example, supposing one firm had purchased sufficient raw material to cover all its manufacturing requirements for a considerable period ahead, and in the meantime the price rose, was that firm not to take advantage of having purchased at an extremely low rate one of the principal components, say copper, entering into the contract?

Mr. FURNISS agreed that any honest trading firm must welcome a sliding scale scheme for prices of electrical machinery, which was comparatively easy on standard plant, but difficult to apply to special quotations. He thought that the enormous safeguard against machinery gambling during the period of demobilisation warranted the extra work that would be necessary.

Mr. LL. B. ATKINSON referred to the question of the whole basis of index numbers based upon an assumed gold currency. It had been suggested that after-war prices should be forced down by creating an artificial scarcity of currency. It was perfectly true that prices rose or fell in relation to large and small quantities of currency, and it was generally assumed that these were related as cause and effect. This, however, was not entirely true. Prices rose because the demand was large, not because there was a large amount of currency in circulation. The currency was in circulation *because* the supply and demand were large.

Mr. MAWDSLEY said that the author's suggested application of sliding scale contract prices to the engineering industry would relieve the manufacturer of a good deal of risk and therefore closer prices could no doubt be quoted. The adoption of a sliding scale system would have to be made obligatory, otherwise it would not work for any length of time; for the purchaser also would not wish to take risks, and if one manufacturer quoted a firm price, and another manufacturer a price subject to a number of indefinite factors the firm price would secure the order, and the sliding scale system would soon go by the board. This question could not be treated in an insular fashion. Other nations had also largely increased their manufacturing facilities and would want business after the war, and even if they adopted a similar system of sliding scales they would not be likely to stipulate for the same percentages. The most disturbing factor would probably be German competition. The problem of the future resolved itself into reduction of costs, taking into account the practical certainty of a continuing high level of wages. High wages, to be permanent and economically sound, must be associated with high production, and a campaign to bring this home to Labour was very necessary.

Capt. DIGBY, in reply, said he was aware that with any sliding scale basis there were difficulties. Mr. Walker's information on labour rates was interesting, but he (Capt. Digby) did not quite follow the reservation by the manufacturer that for each 1s. per week by which the rate of labour is increased by Government authorisation the contract price shall be increased by 1 per cent. or 1½ per cent., dependent on the class of material. Supposing a Government award gave a 5 per cent. increase to men getting 50s. and 3 per cent. to men getting 30s. during the progress of a contract, how was that going to affect the bill which the manufacturers would render? Mr. Stubbs's remarks had reference to the various dates concerned, the date of tender, the date of acceptance of contract, the date of the issue of the priority certificate and "the date of the priority certificate becoming operative." Between the date of the tender and the date of the contract two or three weeks might easily elapse: between the acceptance of the contract and obtaining the priority certificate three or four weeks might elapse, but between the issue of the priority certificate and that certificate becoming operative one could not say how long would elapse because under the rationing system one could not say how long a manufacturer might have to wait for his material. He was not quite sure whether the introduction of the sliding scale system would tend to strengthen what he might call the ring system of tendering. To apply the principle of the sliding scale to some things, such as condensers, water-tube boilers, turbo-alternators or big power-house transformers, was easy, but in the case of switchboard instruments and so forth, where material was negligible and labour

[illegible] main cost, the sliding scale would follow that of labour rather than [illegible]at of materials. He was also not certain that the sliding scale system [illegible]ould have to be compulsory. A purchaser might ask for tenders on a sliding scale basis and a firm might prefer to gamble in regard to price. The sliding scale would give a closer price than the other system. Ald. Walker had referred to the question of rates prevailing in the manufacturer's district. One could not avoid that expression. Increases in wages rates for two classes in London, Birmingham, Manchester and Glasgow were by no means simultaneous or equal. Ald. Walker also raised the question of firms with big stocks. If a firm has a big stock purchased judiciously, he saw no reason whatever why they should not make a profit from it. It might be assumed, however, that merchants' stocks and works' stocks throughout the whole country would be low

RECONSTRUCTION.

A fortnightly series of conferences and discussions is announced by the Industrial Reconstruction Council to be held at six o'clock in the Hall of the Institute of Journalists. The first of these will be opened by Mr. Robert Wilson, of the Ministry of Labour, on Tuesday, September 10, with an address on Works Committees. On September 24 the subject will be Trade Boards, and the speaker Mr. J. J. Mallon, of the Anti-Sweating League. The other conferences will deal in turn with Interim Industrial Reconstruction Committees, the Place of Conciliation and Arbitration in the Whitley Scheme, Women in Industry, the Trade Union of the Future, Functions of Industrial Councils, and Restriction of Output.

INDUSTRIAL RECONSTRUCTION

An important series of conferences and discussions is announced by the Industrial Reconstruction Council, to be held at 6 p.m. in the hall of the Institute of Journalists at fortnightly intervals, alternately with the lectures at the Saddlers' Hall, of which particulars have already been published. The first of these will be opened by Mr. Robert Wilson, of the Ministry of Labour, on Tuesday, September 10th, with an address on "Works Committees." On September 24th the subject will be "Trade Boards," and the speaker Mr. J. J. Mallon, of the Anti-Sweating League.

The other conferences will deal, in turn, with Interim Industrial Reconstruction Committees, the Place of Conciliation and Arbitration in the Whitley Scheme, Women in Industry, the Trade Union of the Future, Functions of Industrial Councils, and Restriction of Output, the opening address in each case being delivered by Mr. W. Henderson Pringle, of the Ministry of Reconstruction, Mr. E. H. C. Wethered, Miss Lilian Dawson, Mr. George A. Isaacs, of the National Society of Operative Printers and Assistants, Mr. E. McGegan, of the Ministry of Labour; and Mr. Wilfrid Hill, of Birmingham. No tickets will be issued, but all those who intend to be present are asked kindly to inform the Secretary, I.R.C., 2 and 4, Tudor Street, E.C. 4, who will be glad to send a full prospectus of the series on application.

RECONSTRUCTION.

A fortnightly series of conferences and discussions is announced by the Industrial Reconstruction Council to be held at six o'clock in the Hall of the Institute of Journalists. The first of these will be opened by Mr. Robert Wilson, of the Ministry of Labour, on Tuesday, September 10, with an address on Works Committees. On September 24 the subject will be Trade Boards, and the speaker Mr. J. J. Mallon, of the Anti-Sweating League. The other conferences will deal in turn with Interim Industrial Reconstruction Committees, the Place of Conciliation and Arbitration in the Whitley Scheme, Women in Industry, the Trade Union of the Future, Functions of Industrial Councils, and Restriction of Output.

INDUSTRIAL RECONSTRUCTION

An important series of conferences and discussions is announced by the Industrial Reconstruction Council, to be held at 6 p.m. in the hall of the Institute of Journalists at fortnightly intervals, alternately with the lectures at the Saddlers' Hall, of which particulars have already been published. The first of these will be opened by Mr. Robert Wilson, of the Ministry of Labour, on Tuesday, September 10th, with an address on "Works Committees." On September 24th the subject will be "Trade Boards," and the speaker Mr. J. J. Mallon, of the Anti-Sweating League.

The other conferences will deal, in turn, with Interim Industrial Reconstruction Committees, the Place of Conciliation and Arbitration in the Whitley Scheme, Women in Industry, the Trade Union of the Future, Functions of Industrial Councils, and Restriction of Output, the opening address in each case being delivered by Mr. W. Henderson Pringle, of the Ministry of Reconstruction, Mr. E. H. C. Wethered, Miss Lilian Dawson, Mr. George A. Isaacs, of the National Society of Operative Printers and Assistants, Mr. E. McGegan, of the Ministry of Labour, and Mr. Wilfrid Hill, of Birmingham. No tickets will be issued, but all those who intend to be present are asked kindly to inform the Secretary, I.R.C., 2 and 4, Tudor Street, E.C. 4, who will be glad to send a full prospectus of the series on application.

WOMEN IN INDUSTRY

AFTER-WAR PROBLEMS.

There has just been published the report of a conference between organisers of trade unions, British employers, and others concerned with the industrial employment of women, convened by the British Association for Industrial Reconstruction, on the position of women in industry after the war. It is an interesting publication, full of far-reaching recommendations. It is pointed out that no fewer than 4,713,000 women are at present engaged in industrial occupations. At the end of the war a very large number of these women will be displaced as war industries are shut down, and factories gradually pass from a war to a peace footing. The absorption of scores of thousands of women thus displaced from occupations which they have followed for a long period will create a series of industrial problems of an exceedingly grave character. Whilst many of the women who have entered industrial life for the first time will be anxious, on the conclusion of hostilities, to resume their normal mode of life, a very large number, for one reason or another, will elect to remain in industry. Some will be compelled to do so, owing to the increased cost of living, or because their men folk will return no more. A definite industrial policy for women workers will thus be needed.

The underlying fact in relation to the status of woman in industry is that her position as an industrial worker is, and always must be, of secondary importance to her position in the home. To provide the conditions which render a strong and healthy family life possible to all is the first interest of the State, since the family is the foundation-stone of the social system. It is accordingly the duty of the State to ensure that women are only employed as factors in industrial efficiency in so far as the interests of family life and the healthy development of the race are not prejudiced. Whilst the experience of the war has shown that women can adapt themselves to the needs of almost any calling, it is clear that many occupations now being followed by women are unsuitable for the permanent employment of female labour.

Presumably it will be possible for 400,000 women to return to domestic service or small workshops, from which they have been withdrawn, either by the attraction of higher remuneration or the needs of the country. If, however, women are to be persuaded to enter these occupations in large numbers, the wages, hours, and conditions of work will require very considerable amendment. In particular, the conditions of domestic service will have to be greatly improved, especially on the side of allowing a much greater amount of freedom to those engaged therein. It may be anticipated that the 704,000 women now engaged on munitions work will either have to seek other employment or cease to be industrial workers, at any rate for a time, after the war is terminated; and, in addition to this number, a considerable percentage of the 696,000 who are at present engaged in Government employment other than munitions will no longer be needed. Many women who are replacing men in Government offices and works will have to be willing to give place to the men as they return from their military duties, so that in all probability occupations will have to be found for about 1,426,000 women and girls.

SUGGESTED OCCUPATIONS.

After full consideration of the line of policy which should be followed, the following conclusions were reached by the conference:

1. That the first consideration should be to arrange for the suitable employment of all demobilised men and men discharged from industrial establishments engaged upon the production of munitions of war.

2. That women should, as a matter of course, relinquish the jobs in which they have replaced men, for reasons directly or indirectly attributable to the war, so long as men are available to fill them.

3. That the school-leaving age should be raised to 15, in order that juvenile labour may not compete with adult labour during the period of demobilisation and the readjustment of industry to peace conditions.

4. A determined and sustained effort should be made to attract as large a number of women as possible into those industries which, by reason of their nature, are more particularly suitable for the employment of female labour. Though a complete list of such industries cannot be given, owing to ever-changing processes and methods, instances might be given by way of illustration, such as the textile industries, the boot and shoe trade, the printing and allied trades, laundry, garment making, millinery, confectionery, tobacco, the paper, stationery, and allied trades, sections of the pottery industry, work in retail shops, clerical occupations, and domestic service. Many schools are understaffed, and the teaching profession, consequently, can absorb a great many women; and if the school-leaving age is raised to 15 many thousands of extra teachers will be required immediately. It has, moreover, become clear that the land, especially the less heavy and more skilled processes of dairy work, gardening, fruit-growing, &c., offers an expanding sphere of employment for women workers. The wage rates and conditions of work in these and other occupations suitable for the regular employment of women should receive immediate consideration.

5. The extent to which married women are engaged in industrial employment should be reduced to the narrowest possible limits. Women with dependent children or incapacitated husbands should receive adequate pensions, so as to avoid the necessity of their being forced to enter industrial occupations in order to live.

6. The hours of labour for women engaged in industrial occupations permitted under the Factory Act, 1901, should be drastically reduced. Under the law as it now stands, women may be employed (except on Saturday or its equivalent) for a working day of twelve hours, subject to one and a half hour for meals for two hours' in textile and certain other factories, and for unbroken spells of five hours' duration, save in textile factories, in which case the unbroken spell must not exceed four and a half hours. These hours are much too long, both in the aggregate and in the length of the spell which may be worked without a break.

The conference expresses the view that the policy of an eight hour day on five days a week, and four hours on Saturday or its equivalent, making a total working week of forty-four hours, should be adopted. The majority were of opinion that the interests of women will be best served if the operatives in the several industries are organised in unions constituted on the basis of the industry in which their members are employed, irrespective of sex, and that women should be accorded an equal status with men in the branch life and organisation of the unions.

Daily News 28/8

WORK AND PAY.

The discussion of one aspect of the wage question initiated in this column a week ago has been very profitably developed by Mr. Sidney Webb in his article in last Saturday's "Daily News" and by other well-qualified writers elsewhere. Since the original article appeared the strike that gave rise to it has been settled, but another springing from precisely the same causes has supervened, and though this in its turn is in process of settlement it is abundantly clear that the whole principle on which the differential remuneration of men and women is based is in the melting pot. The community as a whole—not merely the employed or the employing classes—is faced with the fundamental question whether a worker is to be paid according to the value of his work or according to the extent of his family responsibilities. At present the former practice is almost universal, but the outstanding example of the latter—the soldier and his separation allowance—has for the last four years been so conspicuous and become so familiar that the idea it embodies is destined to have far-reaching influence. Already indeed, there are a few firms which grant a higher war bonus to married than to unmarried men, a particularly logical departure in the case of the bonus, which represents an additional remuneration designed specifically to meet the increased cost of living. Such cases, however, are rare, and the differentiation between a married man's wage and a bachelor's is almost unknown outside the Army.

In the past, in point of fact, men's and women's wages have been a matter of bargaining. Pay was fixed at something between the lowest figure a man would take and the highest figure a master would give. The same applied to women. As most working-men are married, the wage demanded had due regard to family burdens. As most women have no one to support but themselves, they were content to sell their work for a price substantially lower than a man's. Against this almost universal differentiation the principle of equal work for equal pay is now pitted. If that principle is conceded the problem of the married man's family must be faced in earnest. The wage that suffices for a woman without dependants is not going to suffice for the man with a family to support. Someone must share the financial responsibility for his children's upbringing, and that someone can only be the State—which would thus be applying to the productive artisan the principle universally approved in the case of the necessarily unproductive soldier. The State's co-operation could take different forms. The less it took the shape of direct money payments and the more it was represented by the grant of clothing or public meals, or a remission of taxation, or a subvention towards rent, the better. It would be a small matter to decide the form when once the principle had been decided. And the principle at issue is in essence this—how far is it a profitable and humane investment for the State to assume extended responsibilities for the physical and mental nurture of its future citizens?

WOMEN WORKERS.

AFTER-WAR PROBLEMS.

THE FACTORY OR THE HOME?

A considerable proportion of the 4,713,000 women now engaged in industry will become unemployed within a short period of the signature of an armistice, and their position naturally needs sympathetic consideration. Postal, railway, and municipal women will, no doubt, gradually return to normal labour, but the munition crafts will be disrupted by the first breath of peace. No doubt, from the financial and the moral point of view it will be cheaper to pay their wages as unemployed, but that is scarcely the question. The munition factories and their workers need some reshaping and restraining in order to serve in the reconstruction of national life, and this interim rouses problems of an exceedingly grave character. For one thing, many women have adopted industrial labour for the first time, and will be anxious to resume their mode of life now that the national crisis has passed. The withdrawal of these will disrupt the fabric of women's organisation considerably, and make more "ragged edges" than is apparent at first glance. Some women have found "new freedom" in wartime industry; others like the conditions and prefer not to return to shop and factory; others are compelled to continue working, as their men folk will return no more. A great amount of statistical information and much useful deduction and recommendation on "The Position of Women in Industry After the War" is the result of a conference on the subject convened by the Bristol Association for Industrial Reconstruction" and assembled in a sixpenny pamphlet published by Arrowsmith, Ltd., of Bristol.

The New Problems.

Into what industries should the women displaced at the resumption of peace be directed? In what industries should women be retained, and from which should they retire in favour of male labour? What is the best type of industrial organisation for women workers? Upon what lines should we proceed in the great task of industrial organisation which will follow the war? Upon what principle should the remuneration of women workers be based? How far is welfare work necessary or desirable? If a solution of these problems is found, then the way will be cleared for a definite industrial policy in this direction.

The position of woman as industrial worker is second, in the interests of the State, to the promotion of a strong and healthy family life. Accordingly the numbers employed is governed by this factor. Women can adapt themselves to practically every job, though some are unsuited to their physical well-being. Into these they should not be allowed to enter. Of women workers in this country, 1,415,000—practically equal to the increase from July, 1914, to October, 1917—are directly replacing men, and half that number is o munitions service. Domestic service has p vided roughly 400,000 recruits to the industr services since the outbreak of war.

Demobilisation Problems.

The difficulty of reconstruction, in la as in everything else, is the undoubted shortage of raw materials (especially ire steel). The immense military stocks be returned: there will be no "beating into ploughshares and spears into hooks" for a generation to come reorganisation of working hours in industries will absorb women worke demobilised men come back—by whic the whole industrial machinery will b ing its destiny. If demobilisation is out with first regard to raw materi plight of the women munition workers be considerably ameliorated.

It is still a moot point where the whol tion of trades unionism should either b over, the women incorporated in men's or sations (with a reduction in number o latter), or organised according to their On the whole, the basis of organisation industry is preferred as Commissions dealin with industrial matters have flagrantly failed to see that their considerations, and their judgment, cannot be restricted to the men or women separately whose applications are before them. The future of trades unionism must not be clouded by sectional jealousies.

Women's Wages.

The wage problem of to-day is a constant reminder that prior to the war women were generally underpaid. They had no trade organisations, were largely engaged in less skilled and unskilled processes, such as repetition work, and the workers gave no more of their interest than they could help, looking upon a few years of industrial life as the bridge between school-life and marriage. Employers keenly grasped the fact that most women had no dependents, and less physical fitness than men. There was also the idea that they could live on smaller incomes. Trade boards tended to reduce the sweating o women workers, but in the industries chiefly concerned wages were very low and "gave the pace" to all other trades.

The war has seen a revolution in this question, and the standard of wages has been permanently raised. Equal pay for equal work is now demanded, but the principle is easier to assert than to apply. If the principle is now admitted it cannot be reconsidered after the war. Women at lower wages endanger the standard of life for men workers.

There is an anxious feeling that welfare work, so enthusiastically entered upon by the many, is not developing on satisfactory lines. The very titles designate a patronage which is often resented. The principle admits the personal responsibility of an employer for his workers, and is therefore to be encouraged. Girls swept from the sheltered peace of home and school into the unfamiliar turmoil of industrial life need help and supervision, especially in questions of health. A good deal of effective work might be done if shareholders in our great limited companies employing thousands of women insisted on one or more women joining the directorate. In this case the whole business would be more humanised, and more efficient to grasp the adaptableness of their women workers to new business processes and conditions. The masculine inability to see this factor often accounts for great delay in taking up obvious opportunities.

The whole position of women workers after the war is fraught with difficulty and merits careful consideration. At least a million and a half of our population is involved, and any precautions which tend to abolish "a bad time" between the signing of an armistice and the restarting of peace industries with full supply of raw materials must be observed as a national duty

Westminster. 4/9. 1918.

"AFTER THE WAR."

WOMAN'S PLACE FROM A WOMAN'S POINT OF VIEW.

The British Scientific Products Exhibition, which has been running at King's College, Strand, during the past four weeks, closes its doors on Saturday. Judging from the number of visitors who were present in the course of yesterday, the remarkable collection of exhibits which have been gathered togther has lost none of its attraction to the general public. In the course of the afternoon Dr. Ethel N. Thomas delivered a lecture upon "Women's Place in Scientific Industry."

Dr. Thomas, who spoke without notes, prefaced her address by stating that what she had to say would be more of the nature of an informal talk than of a stereotyped lecture. Many people would disagree with her (she said), but nevertheless she was strongly of the opinion that women's place in scientific industry should be upon precisely the same plane as that of men. There could be no such thing as feminine science as opposed to masculine science. Admittedly, in pre-war days women played but a very small part in the realms of science in this country. To-day, however, their activities were increasing hourly. In the skilled region of the workshop, as opposed to the larger area of the factory, at the present time women were engaged in optical work, making from end to end lenses, telescopes, and periscopes. Again, women had the sole control—in isolated cases admittedly—of the machinery involved in certain fruit factories and bakeries.

The lecturer confessed that such a position would only tend to make the dislocation of labour at the outbreak of peace infinitely worse than at the outbreak of war. Approximately, 1,000,000 women had been added to the labour market since August 1914, about three-fourths of whom had been recruited from the obscurity of the non-wage-earner into the fierce light that surrounded the producer. It was absolutely essential that this country shall face the fact that, like all other nations involved in the war at the end of hostilities, it would be comparatively poor. These women would remain consumers. Would it not be in the national interest that they should also remain producers? Personally, she believed that the influx of women into the labour market would do no more than compensate for the loss of the men who had perished at the front in the national cause; and she urged that women should be retained in the more brainy and less brawny occupations. Women should be afforded an opportunity of trying their hands at everything, and then finally they would find their level and simultaneously their right sphere.

FULLER LIFE FOR THE WORKERS.

Human Reconstruction After the War.

PRACTICAL PROPOSALS.

One of the most important aspects of the new era which has come upon us as the result of the war is the subject of a report which has been presented to Dr. Addison, Minister of Reconstruction, by the Committee on Adult Education, of which the Master of Balliol is chairman.

"We have awakened," says the report, "to the splendid qualities that were latent in our people, the rank and file of the common people, who before the war were often adjudged to be decadent, to have lost their patriotism, their religious faith, and their response to leadership; we were even told they were physically degenerate. Now we see what potentialities lie in this people and what a charge lies on us to give these powers full play."

CRAVING FOR KNOWLEDGE.

With this object in view, the Committee present the warmest plea for a generous reconstruction of many of the conditions of daily life, in order that the workers, both men and women, may have fuller opportunities to satisfy the craving for knowledge and a fuller life. "We are convinced," they say, "that long and irregular hours of labour, night work, and the shift system deprive those who suffer from them of the freedom that all men prize, and the community of the full service of its citizens."

The Committee therefore recommend that the maximum legal working day should not be more than eight hours, that overtime should be reduced to a minimum, and that regular night work, except when essential, should be prohibited.

The report deals with the effects of monotonous work, and recommends that alternative forms of employment should be encouraged. It also urges that wherever possible mechanical devices should be used so as to supersede the heavier and degrading forms of labour, and that means should be found to secure the worker against the constant fear of unemployment.

HOLIDAYS WITH WAGES.

The need for holidays is strongly urged—not, as the Committee say, "periods of unemployment," with loss of wages, but an extension to the workers of the custom among salaried workers of payment during holidays. A weekly half-holiday should be granted by law to agricultural workers.

The Committee condemns the existing housing conditions as an insuperable hindrance to women in any effort at self-improvement, and states that a comprehensive scheme of housing reform is of vital importance, for upon it will depend in no small measure the extent to which women will be able to play their part in public affairs.

As an aid towards reconstruction in the conditions of village life, the Committee recommends the provision of a hall under public control in every village.

Spectator 7.9.18. (Duplicate.)

WOMEN'S FUTURE

Entry to Parliament & the Professions.

LABOUR PARTY'S BILL

The Government, having been advised legally that women are ineligible for seats in Parliament, will soon be called upon to accept or reject proposals for securing their eligibility; and it is thought by some of the most ardent supporters of women's full enfranchisement that the Government will not need any great effort at persuasion in the matter.

Already a Bill has been prepared by the Labour Party for introduction at the earliest possible moment. There are hopes that this Bill, or one in similar terms, will be adopted as a Government measure. It is a Bill of one operative clause, as follows:

> A woman shall not be disqualified by sex or marriage for being elected to or voting in and shall for all purposes be deemed to be capable of being elected to and voting in the Commons House of Parliament.

WOMEN'S CONFERENCE.

There is every indication that the National Conference of Women, which will discuss this matter (among others) under the auspices of the Labour Party on Oct. 15, will be representative and successful. A special resolution to be proposed at the session over which Dr. Ethel Bentham will preside demands:

(1) That the Government should immediately on the reassembling of Parliament introduce and pass through its stages a Bill enabling women to be elected to and vote in the House of Commons.

(2) That further legislation admitting women to professions from which they are now excluded should be passed.

(3) That the Representation of the People Act, 1918, should be amended so as to give the Parliamentary and Local Government vote on a short residential qualification to all men and all women of 21 years of age.

This resolution is to be moved by Miss Mary Macarthur, the first woman to be chosen formally by any political party in a constituency as a candidate for Parliament.

WORK ON COMMITTEES.

"I don't anticipate any serious opposition now to the admission of women," said Dr. Marion Phillips to a "Daily News" representative yesterday. "If women are good enough for voting they are good enough for membership of the House.

"You have women on practically every committee. I cannot think of a single Labour woman of any prominence who has not been a member of Government Committees during the war, and women of various shades of political thought are doing similar work."

Meanwhile, the Women's Freedom League is asking the Executive Committee of the National Liberal Federation to go farther than its program suggests at the Manchester Conference. "We want," says Miss Underwood, the secretary, "to see women M.P.s, women judges, women magistrates, women lawyers, women commissioners of prisons, and women on all juries. We believe this demand would form a popular part of a Liberal program."

Within the next few months the claim of a woman, Miss Helen Normanton, to become a student at the Bar and a barrister will be decided by the Lord Chancellor and the judges.

"A point that may weigh with the judges," Mr. Holford Knight, who has always supported the right of women to enter the legal profession, told a "Daily News" representative yesterday, "is that women were recognised by law when they were enfranchised. Before the Franchise Bill was passed they were not recognised as persons according to Statute Law nor Common Law. Now the judges must decide whether or not their recognition by one branch of law involves their recognition by the other."

WOMEN'S WORK AND WAGES

[To the Editor of the "Spectator."]

Sir,—Had the article in your issue of August 24th entitled "Women's Work and Wages" been written three, or even two, years ago there would have been few, I think, who would have disagreed with the views of the writer. The war, however, has changed many things, and the economical position of women amongst others. Formerly women were willing to accept inferior work, and, in many cases, were not paid anything like a living wage. Now they know their own value, and the world at large knows it also. It is, I suppose, to be understood that the writer of the article refers to the unmarried women workers. For he (or she) must allow that if the married women work, as do their husbands, generally speaking, to support their families, they are, even though women, entitled to the same pay. The unmarried women workers are, compared with the married couples, few in number. But, with the exception of the five per cent. of "superfluous women," they generally marry. These women know that their work is as well done as that of their future husbands, whom nobody proposes to penalize because they are, as yet, unmarried, and they feel that they are justly entitled to have what they earn in order that they may help to provide for their future homes and a "nest-egg" in case of hard times. The women who do not marry intend to be honestly paid in order that, when they can no longer work, they may be able to support themselves on their savings. Till now scarcely one woman in a thousand has been able to do this. The "necessary minimum," of which the writer of "Women's Work and Wages" speaks, must provide this equally with the amount supposed to be necessary in the case of a male worker. The "law of supply and demand" will improve the woman's position. We have to face the fact that a very large proportion of the men who joined the Army will never return to their former work. Women will still be required in large numbers when the war is over. The supply will certainly be insufficient and the demand greater even than at present. It is this fact, and the present political position of women, that will give them the power to enforce their claim to this "necessary minimum." It may also be questioned if the "extra strength of the male gives him endurance." Do not insurance statistics prove that while most men possess considerable muscular strength for some years of their lives, it is doubtful if they have the endurance of women. Certainly they do not live so long.—I am, Sir, &c.,

Edith M. Thompson.

St. Nicholas Terrace, York.

[We have already admitted our correspondent's case though we published a communicated article which took a rather different view. In our opinion the concession of the principle "equal pay for equal work" would be demanded by almost the whole electoral strength of the women, and much domestic trouble would result. It is better to accept the principle at once, and leave it to economic laws—far sterner judges than men—to adjust the working difficulties.—Ed. *Spectator*.]

702/102 702

COTTAGES ON THE ANNAN ROAD

COMING TO LIFE.

THE present condition of Europe may be likened to a vast cataract daily increasing in volume and momentum by the dam against which it is forcing itself.

As soon as the obstacle is removed the flood will expend itself with great violence over the whole face of the Continent, and unless controlled and directed into the proper channels may dissipate itself in unexpected directions with undesirable results.

The colossal mass of labour now enslaved by the Arts of War may when released waste its whole force in fruitless efforts and aimless struggles with contending forces unless controlled and directed with wise and far-seeing ability by proper inducements into the right channels.

The relative claims of Agriculture, Forestry, Mining, Shipping, Transport, Building, and the key industries have each to be weighed and allotted, and the old dissipation of labour on luxury trades has to be diverted into productive channels.

Only by this means can we hope to reduce the prices of necessaries, for all labour expended on luxuries being drawn from the production of necessaries tends to raise or maintain their price.

Left to itself we should probably find too great a tendency towards emigration or towards small farming or possibly to resume our system of small shopkeeping (a great deterrent to production), or to go back to useless trades and the manufacture of things we can do without.

To prevent this continued control seems to be essential.

This control could be exercised either by a system of licences, or by regulating the labour of men as they are released, or by special inducements offered. First we are to have the fostering of the "key" industries—Glass, Dyes, Chemicals, &c.—but it seems very doubtful whether if we have to do this and at the same time to maintain our supremacy as before in the Engineering, Textile, and other trades, we have sufficient resources in labour.

Some allowance must be made for the dilution of the labour market by the employment of women. When we hear of a cement works run almost entirely with women's labour, the only men remaining being foremen, engineers and rotary kilnmen (Board of Trade Labour Gazette, August, 1918), we can realise what this means. The figures showing the relative numbers of insured males and females employed during July are startling, viz.:—Men, 2,629,012; women, 1,292,872. In the building and construction trades of course this proportion does not hold, there being only 7,631 women against 576,098 men, but the employment of women on concrete, painting, glazing, fitting, &c., is only just beginning, and may possibly increase.

We cannot assume all these women will remain in their present occupations, though doubtless a large proportion will do so.

GRETNA: GROUP OF STAFF HOUSES.

We also have to reckon the surplus labour involved by the abandonment of the superfluous trades which will probably take place, such as cheap jewellery, "fancy goods," perfumes, &c.

But against these two factors there is the imminent prospect of our having to maintain more than one occupation army in the countries defeated. These will absorb a great many of our men even if America does undertake the larger share of this work.

Before the war the number of men engaged in the building trades was approximately 1,100,000. Last July it was 583,729.

After the war, allowing for casualties, emigration, &c., we cannot safely reckon upon more than 850,000, and at first probably not more than 750,000.

With this reduced number we have to face a stupendous amount of work. We have the accumulated urgent repairs of five years on all the buildings in the country, the inevitable renewals of dangerous structures, the arrears of new houses required, also of schools upon a more liberal basis than before, the completion of the large number of uncompleted buildings, the fulfilment of the numerous suspended contracts by lessees who had signed building agreements, and the repair of practically the whole of the roads. In addition to all this there will be the adaptation of the present munition factories to their new purposes. Sir Edward Holden in his speech on the amalgamation of the London City and Midland Bank with the London Joint Stock Bank on the 13th inst., said that it had been estimated that at least 300 millions would be required merely for the purpose of re-establishing our industries. If we add the aforesaid obligations the total would certainly be more than doubled.

Assuming that half this sum goes in wages and that each man receives an average wage of £4 a week that would mean about 2 years' work, but there will be delays, waiting for negotiations, and for raw materials, also for labour adjustments, and it is quite conceivable this period might cover 3 years.

It may be confidently predicted that the effect of this great dearth of labour upon prices will be to maintain the present figures for a considerable time. This is now over 100 per cent. above pre-war prices. These are determined by the cost of living, and that in its turn largely by our shipping and transport facilities.

While war conditions last it is proposed by the National Federation of Employers that licences to build shall still be necessary but not priority certificates for materials, and to remove the tendency to do nothing on the part of employers which is attributable to the excess profits duty it is proposed that profits should be limited. By this means every contractor would be certain of securing a proper remuneration for his services. These licences will probably continue until national demands are satisfied.

Conditions will be affected by the following factors, viz.:—Demobilisation, improvement of shipping facilities sufficient to remove the restrictions on imports, the cessation of building licences by the fulfilment of national requirements, and, lastly, the state of the money market.

These will probably cause three distinct periods, each varying from the other, in respect of the cost of building work.

1. The period between the demobilisation and the removal of restrictions on imports.

2. The period between the date of imports unrestricted and the removal of restrictions on building.

3. The period following these events.

During the first of these periods lasting possibly one year or 18 months it may be expected that the cost of building will remain much as it is now, as the cost of living cannot be expected to fall while imports are restricted into the country; the competition to get food between all the countries of Europe which have starved for so long will tend to keep prices at the present level.

It does not follow of course that the satisfaction of national building needs will be simultaneous with the unrestricted imports of food. The greater urgency of the latter and the universal accen[illegible] be expected to give us the food stu[illegible]

The second period, which according [illegible] the time required to satisfy national needs, viz. [illegible] would therefore cover about 18 months. During [illegible] time no doubt great pressure will have been put upon the authorities to widen the limits of what may be defined as national work, and if successful, this must tend to lengthen this period.

The cost of building during this period will of course vary, war bonuses will be lifted one by one (intervals of four months for consideration of wages are suggested by the National Federation), prices of materials will recover slowly, and we may perhaps look forward to a reduction of as much as 50 per cent. by the end of this period.

After the expiration of these two periods, when everyone may do as they like, a new phase will be entered and the law of supply and demand will have free play, and it would not be surprising if the bids for priority to get work done, which has been delayed so long where continued delay would involve very heavy losses, should induce many employers to offer prices having little relation to the actual value at other times.

Such a condition might cause prices to advance almost to present rates if not beyond them.

It is impossible to predict how long such a period would last. It would largely be regulated by the whole economic position, and that in turn would be settled by the success which attends the effort to stimulate production by bringing employers and men into closer touch and understanding, so that there may be no more cutting of piece-work rates on the part of employers, and no more limitation of output by the men.

Socialistic forces will play their part and there may be a stiff fight to establish the absurd theory of the equality of men.

The Report of the Departmental Committee appointed by the Board of Trade to consider the position of the building and engineering trades after the war endorses the unanimous complaint of employers as to two things:

1. That at present the workman deliberately restricts output.

2. That the trades union rules class much unskilled work as skilled.

And as to the first they think the causes are twofold, viz.: that certain classes of labour believe there is only a certain amount of work to be done and that it should provide employment for as many as possible, and also that the less superior powers of production of their older fellow workmen should not prejudice their position. Loyalty to their unions dictates this conduct. The Committee think the first idea is fallacious, and that one of the lessons of the war is that there will be more work to be done than people to do it.

As to the second the suggested remedy is the institution by statute of fixed minimum district rates, as in the coal mining trade. They think that to enable an expert workman to earn during the best years of his life the maximum possible wages, *piece work or a bonus system on time work* should be the basis of all employment. Then on this condition and provided that the introduction of automatic and other most recent machinery is freely adopted they consider it will be possible to maintain for both skilled and unskilled labour *a higher rate of wage* than that paid prior to the war. This permanent increase was assessed by Mr. E. Selby in a paper read at the Surveyors' Institution at between 25 per cent. and 30 per cent. In our opinion it will be five years at least before this level is reached, if at all.

There is another element which may possibly offer a solution and reduce these delays. We refer to the possibility of the importation of more labour from China, especially for unskilled work. These men, of which there are 50,000 now at the Front, are doing excellent work, and are receiving 35*s*. a month in addition to their keep. It could only be permitted on emergency grounds, but no one can deny that description of the position for some years to come.

WAGES APPEAL BOARD

Suggested Tribunal as Extension of Whitley Council Scheme.

The Executive Committee of the National Alliance of Employers and Employed, who have been considering the question of industrial unrest, recommend the calling of a national conference on industrial problems.

Among the suggestions made by the Alliance is the establishment of a Central Industrial Board consisting of representatives of employers' associations and trade unions in equal numbers and of the Government Departments concerned. On this Board all the staple industries should be represented.

For national and local organisation of separate industries it is suggested that the scheme of National and District Industrial Councils recommended by the Whitley Committee should be adopted. A further proposal is that the Committee on Production should be abolished, and a Wages Appeal Tribunal set up. The services of the Wages Appeal Tribunal would be called in on matters of wage adjustment only when the Whitley National Council concerned had failed to reach agreement.

Manchester Guardian. 14.10.18.

War Pledges Bill Essential.

THE Government's War Pledges Bill—the Bill that is to give effect to its pledges to Labour—is long overdue, and its introduction cannot be delayed further without serious danger. Two discussions of the last few days have emphasised its urgency. The best methods for speeding up production in munitions and shipbuilding have been discussed at conferences with munition workers and the trade unions working in the shipyards. The problem of women's labour after the war has been discussed at the Women's Conference at Harrogate and elsewhere. The War Pledges Bill is closely related to both sets of questions. It is needed, in fact, both as a war measure and as a reconstruction measure. Mr. CHURCHILL must have learnt in the course of his conferences with munition workers, if he did not know it earlier, that the unrest which displays itself in disturbing and inconvenient ways in the workshop is largely due to suspicion. And can anybody wonder that the workmen are suspicious? The Government induced them to surrender customs and practices that were all-important in their eyes, as the charter which they and their forefathers had won by generations of struggle and sacrifice. To the onlooker that might seem a small matter in the crisis of the war. But to the workmen it was like granting an armistice in which positions essential to their defence against the power of their employers were surrendered, as a voluntary act, in return for pledges from Ministers. The first demands on their public spirit have been extended as the war was prolonged, and dilution, at first allowed strictly for war work, was applied to commercial work; the circumstances under which this happened were not calculated to reassure the workmen. If we were to fathom the depths of mistrust in the engineering works at the moment we should find that the ordinary workman believes that he will find himself at the end of the war with a great flood of non-unionist labour in the workshops, with his trade union rights lost and a very doubtful prospect of recovering those rights. He hears all sorts of talk about the impossibility of restoring the old conditions and the impatience with which the country, in desperate need of commodities and income, will regard the old restrictions. In this atmosphere it is criminal folly to treat the War Pledges Bill as unimportant, as a measure which may be introduced just as well next week as this. It is needed at once. Until the workman sees the Bill he will continue to doubt the Government's good faith. And nothing poisons the unity of a nation and the will of shell factory and shipyard so surely as mistrust.

The passing of the Bill is also the essential preliminary to the settlement of the difficult and threatening problem that will face us at the end of the war. The war has squeezed into two or three years processes and changes that would have taken a generation, or possibly two generations, in the ordinary course of industrial development. The future relations of men and women in engineering work is not merely a sex problem; it is partly the problem of the changing relations of skilled, semi-skilled, and unskilled labour. Anything like an internecine quarrel between men and women or between skilled and unskilled would be a national disaster, though some employers may be tempted to foment it. The trade unions have to find a solution. The best brains of their leaders and of the able thinkers who are now at work on industrial problems ought to be applied to discover the best means of adapting the trade union structure to these new conditions. But no discussion or negotiation on these points is possible until the rights of the trade unions are explicitly declared by Act of Parliament. Once the Bill is passed the trade unions can explore the new situation created by the war with freedom and responsibility. With that Act in their hands the whole question passes into the region of statesmanship; without it every aspect of the question is in the region of war. The passing of the Act is the first stage in the series of constructive measures without which the war will be followed by industrial chaos.

FUTURE OF LABOUR.

Members of Committee to Advise Ministries.

The Admiralty and the Ministry of Munitions announce that the following is the composition (members and those by whom they are nominated being given) of the Joint Consultative Committee which has been set up in accordance with the recommendations of Mr. Justice McCardie's Committee of Inquiry:

Sir Thomas Munro (Chairman), nominated by the Government.

Mr. W. F. Dawtry, Mr. J. Kaylor, and Mr. G. Wilkinson, by Engineering Group of Trade Union Advisory Committee to Minister of Munitions.

Mr. Frank Smith and Mr. W. J. Wentworth, by trade union representatives on National Joint Committee of Shipbuilders' Federation and Shipyard Trade Unions.

Mr. C. Duncan, M.P., by less skilled trades group of Trade Union Advisory Committee to Minister of Munitions.

Sir Allan M. Smith, Mr. T. Philip Chatwin, Mr. D. S. Marjoribanks, Mr. A. S. Ross, and Mr. J. C. A. Ward, by Engineering Employers' Advisory Committee to Minister of Munitions.

Mr. John Barr and Mr. A. M. Kennedy, by Employers' Representatives on the National Joint Committee of the Shipbuilders' Federation and Shipyard Trade Unions.

Secretary, Mr. C. S. Hurst, Ministry of Munitions.

The Women's Trade Union Advisory Committee to the Minister of Munitions have also been invited to nominate one member on the Joint Consultative Committee. They have, however, expressed their unwillingness to make any nomination unless their representation is increased to three members. It is proposed to submit this question to the Joint Consultative Committee itself for advice.

The terms of reference recommended by Mr. Justice McCardie's Committee and adopted by the Admiralty and the Ministry of Munitions are:

To consult with and advise the Admiralty and the Ministry of Munitions on such questions relating to labour as the Admiralty and the Ministry of Munitions may submit for their consideration.

Daily News. 18. 1918.

DEMOBILISED WOMEN WORKERS.

Use of Munition Plant for Peace Projects.

Hundreds of thousands of women in munition works, Miss Susan Lawrence reminds us, will be liable the moment peace comes to a sudden cessation of work, and they will be left in many cases far from their homes with nothing but their unemployment allowance of 7s. a week.

All we could gather yesterday from the Ministry of Munitions and the Ministry of Reconstruction was that "the matter is engaging the attention of the authorities," and that "it has been suggested that the women shall be given a month's pay and a free railway ticket to take them home."

Beyond this—though it is a matter affecting the skilled rather than the unskilled workers—are the preparations, which are going ahead rapidly, for utilising the machinery of war for the constructive work of peace. Here we may quote the program of two or three of the most prominent firms as typical of many others. Vickers, for example, are looking forward after the war to a very largely increased output of ships, railway material, motor-car engines, turbines, and electrical material.

The Birmingham Small Arms Company has arranged to turn to a program which will include a line of manufacture forming a key industry for which in the past we were entirely dependent upon imports from other countries.

Then, again, there is the Aircraft Manufacturing Company, which is looking forward to the experience gained in the construction of aeroplanes for war to prove of commercial value when peace comes.

WOMEN IN INDUSTRY.

WHAT WILL HAPPEN AFTER THE WAR.

The general question of the position of women workers after the war has just been considered at an unofficial conference between leading trade union women and employers of labour arranged by the National Alliance of Employers and Employed, the Right Hon. Frederick Huth Jackson, P.C., being in the chair. The first question discussed was whether the one and three-quarter million women who in addition to the three million in industry before the war now compose the women's industrial army could be retained in industry after the war. It was pointed out that there was to be first considered the pledge of the Government to the trades unions that the men should all go back to their old jobs and that pre-war conditions should be reinstituted in industry. There was also the extreme difficulty of the conversion of the factories from the production of raw materials to the needs of peace, and there was the further problem of the obtaining of the necessary raw material so that there should be no break in the work. It was felt that the terms of peace would have an important bearing on the question. It was also anticipated that the rate of demobilisation would be an important factor. Demobilisation proceeding at the rate of 50,000 a week (a very high figure, seeing that four-fifths of the soldiers would have to be brought from abroad) would take two and a-half years at the least. It was realised that the Government must be compelled to fulfil its pledges to the trades unions, but this was seen to in no way apply to new industries, such as the dyeing industry, which has been created during the war, or to the extension of old industries that have led to the employment of an increased number of workers as compared to the pre-war figures. The general opinion was expressed that while there would be a temporary period of dislocation, during which time the whole community would have to be patient and work on a give-and-take basis, there was little doubt that there would ultimately be work for all, and the whole of the women at present in industry could be retained. The possibility of a minimum wage was discussed and the meeting was unanimous that such a thing was advisable, and that it should be based on a reasonable standard of life, but would have to vary in different areas. It was also agreed that during the period of demobilisation it would be better to institute a system of part time work, so that the whole of the workpeople should be employed for part of the day or part of the week, rather than that some should be employed full time and the rest turned out on the unemployment market. It was anticipated that this period would be only temporary, and ultimately all would be reabsorbed. Dissatisfaction was expressed at the delay in the production of definite and co-ordinated plans by the Government, and the conference adjourned, agreeing to meet again either to consider the Government's demobilisation proposals or, failing that, to formulate its own on the nearer approach of peace.

6,000 WOMEN MARCH TO WHITEHALL.

MUNITION WORKERS' DEMANDS.

Whitehall was considerably astonished yesterday afternoon by the appearance of about 6,000 women munition workers, the greater number of whom came from Woolwich Arsenal, and the others from munition factories all over London and its suburbs. The women formed up in procession with many large and small banners, and each one of them wearing her munitions badge. They did not look in the least like the expensively-gowned, highly-paid munition worker of whom so much has been heard, but rather represented the woman worker who is the permanent industrial product.

The idea of the demonstration was quite spontaneous, and originated at the Arsenal on the previous day, when it was found that many of the women were under notice, and they determined to go to the Ministry of Munitions and ask for immediate guarantees for the future. Their intention was communicated to the Prime Minister and to the Ministry of Munitions. The Ministry asked Miss Mary Macarthur, hon. sec. of the National Federation of Women Workers, to introduce the deputation. As the procession was about to march to Whitehall-gardens the inspector of police pointed out that while Parliament was sitting no procession could take place within a mile of the precincts of the House. The women made it clear, however, that whether it was legal or illegal they proposed to carry out their plan, so the Prime Minister and the Ministry of Munitions were communicated with. Permission was granted on condition that the women waited until the King had left. Then the 6,000, in excellent order and loudly cheered by soldiers and others, marched past the Horse Guards, accompanied their deputation to the Ministry, and then proceeded to Kingsway Hall to await the result.

Sir Stephenson Kent, head of the Demobilization Department, and Sir Thomas Munro received Miss Macarthur and 20 women shop stewards from the Arsenal. The women carried a small banner, which had attracted much attention, with the inscription, "Shall Peace bring us Starvation?" in red letters. The officials received them with courtesy and sympathy and provided them with tea, and afterwards they left for Kingsway Hall in motor-cars belonging to the Ministry.

Request for Greater Unemployed Pay.

The women's claim was for a living wage while working and for an adequate maintenance allowance on discharge. They urged that the promised £1 a week while unemployed was only worth 8s. 4d. now, and claimed 30s. They also asked for increased pensions for soldiers and increased allowances to soldiers' widows, so that they might not compete with them.

Sir Stephenson Kent said he quite understood the natural apprehensions of the women and he thought they were perfectly right to express them. Everything would be done to make the discharges as gradual as possible, and they would try to reabsorb as many as possible in industry. He could not attempt to deny that there might be a certain amount of hardship. He promised to report to higher authorities upon the matters raised by the deputation, but the only definite statement he made was that the special unemployment pay would date from November 25.

At the meeting at Kingsway Hall, which was crowded, Miss Macarthur said that all those women who had not spared themselves were entitled to rest, and they should have a month's holiday with full pay. After that they were entitled to adequate maintenance until suitable jobs had been found for them.

Manchester Guardian 18. 12. 18.

WOMEN IN INDUSTRY.

LADY RHONDDA INTERVIEWED ON NEW LEAGUE.

London, Tuesday.

The Women's Industrial League, an organisation which holds tremendous possibilities for the future development of women's industry under the new conditions, has come into being very quietly, but already within a month of its inception applications for membership have been received from great numbers of women employed in industry in all parts of the country—tailoresses, shop girls, factory hands, engineering operatives, and especially women holdinng more or less responsible positions in works. It has at the same time the cordial approval of many outside women interested in the welfare of the nation's women workers. It has offices at the Central Buildings, Westminster, and Viscountess Rhondda, who has a very adequate knowledge of the present industrial position, is president.

In an interview to-day with a representative of the "Manchester Guardian," Lady Rhondda explained that the League was formed directly after the armistice was signed by a body of women who felt that such an organisation was urgently needed. In a moment the whole position of industry had changed, and they realised that this would mean the almost immediate discharge of a very large number of women who were now keenly anxious about their future.

There was in some quarters rather a tendency to suggest that these women should go back to unskilled work and to pre-war occupations, where they had so often worked at sweated wages. This, Lady Rhondda declared, would be fatal, and the only remedy was to organise them on a very large scale. Their experience in war industry had proved how precarious their prospects were in peace. Many of them had, indeed, been treated generously by the skilled men who instructed and supervised them, but others had had to contend with an open or insidious opposition. Conditions of work had been unsatisfactory, opportunities had been denied, work poorly paid.

The Premier's Promises.

"What we are asking for," said Lady Rhondda, "is equal opportunity for employment in all occupations suitable for women—equal training and educational facilities, equal treatment with respect to pay and working conditions, and adequate representation by women on all official committees and public bodies. These claims were embodied in a memorial addressed by the League a few days ago to the Prime Minister, and we consider that his reply constitutes a new charter for women in industry. He has promised that the new industries shall be open to them, that they shall have facilities for trade or professional education and training in schools and universities, and he has approved of the demand for equal pay for equal output and for more effective representation on committees.

"The League considers it very important that women should join trade unions, and it will encourage them to form new trade unions as occasion requires. But our idea is that the League can cover a great deal of new ground, and help all classes and types of organised and unorganised labour. It can also deal with interests common to women in all industries, so that, while each trade union deals with the needs of a particular industry, the Women's Industrial League will deal with the common interests of the whole.

"We want to have as members all women connected in any way with the interests of women in industry—labourers, operatives, supervisors, works managers, and directors. We believe that with their help the League will have tremendous possibilities for usefulness. Local committees are being formed in the leading industrial centres, and they will elect representatives on the Central Council. I need hardly say that the League has nothing to do with any political party."

702/106 702

Times Engineering Supplement 19 XII. 18

Women in Industry.

Lady Rhondda and the Women's Industrial League are to be congratulated on the terms in which they submitted to the Prime Minister the claims of women for continued employment in industry. Whether or not temperate and moderate statement is effective in political discussions, or has always characterized all sections of those who have fought the battle of women, it will always be the best means of attracting the consideration of business men; and the League has been well advised in having, as the Prime Minister recognized, presented a temperate memorial. In particular, it has been wise of its own accord to acknowledge that returned soldiers, in common with skilled men who have helped women by training and supervising them, have a prior claim to employment; and on this basis, and subject to their own stipulation that they should receive equal pay for equal output, the way should be clear for women's employment in the vast variety of work that war experience has shown to be suitable for them. It is, perhaps, more than a coincidence that the League's memorial should end by asking for information on "the precautions by which industrial fatigue may be reduced to its economical minimum and the hours and conditions of recreation correspondingly extended." The memorial professes both wisely and truly that women have no separate interest from men in seeking the "conditions of well-being that are indispensable to the most efficient working." The results of a really sufficient investigation into conditions affecting industrial fatigue might well confirm the belief that the interest of employers in providing conditions of well-being is likewise the same as that of their workers, whether men or women. To convert the grounds for that belief into an orderly demonstration warranted by experience would, perhaps, do more than any other single measure to simplify the industrial situation and conciliate the interests of all parties to industry.

DEMOBILISED GIRLS.

By ALICE J. WHITMORE.

We are in no danger of overlooking the fact that women as well as men are being demobilised. The queues of girls outside the Labour Exchanges are sufficient evidence, and, though these girls are in most instances simply "reporting" while they receive furlough pay, it is an indication of what is generally happening.

Shortly there will be demobilisation upon a large scale of another type of girl—demobilisation which may prove to be tragic in its results. I refer, of course, to the office girl, the bank clerk, and girls in similar positions, many of whom will certainly be required to make way for the men whose places they have temporarily occupied.

A great number of these girls are to be reckoned among the "pin money" girls, and these, we are told, are to be the first dismissed. If it is possible to make just discrimination, this is only fair, but in many instances this will prove to be a difficult task.

Some girls, however, from the beginning frankly announced their position as one either of patriotic intent or of a desire to earn "pin money." In either case the situation is fraught with danger and difficulty. For the "pin money" girl is just the girl who will for the first time in her life have tasted the sweet joys of independence.

Moreover, she is, as a rule, just the girl who has had no special training for anything. Frequently, too, she has refused to take seriously any work she may have undertaken, and consequently even during the war has not qualified for any good appointment.

Yet, just as domestic servants have declared against a return to their former occupation, so these girls are determined not to return to their previous manner of living.

The "pin-money" girl has tasted the joys of a latch key, of "digs" where she may call her soul her own, and to which she may invite whom she will among her friends without first submitting them to family inspection. She has been able to choose her own clothes without reference to the ideas of the particular clique in which her mother circulates.

She has been able to "pal" with men without anxiety as to whether the Mrs. Grundy who represents her mother's social sphere will consider that she is "going too far," or that "in her opinion something ought to come of it"!

She has, in short, tasted without let or hindrance of the joys of a bachelor existence exactly on the same terms as a man, and now she is confronted with the possibility of a very rough time, or a humiliating return to the old conditions.

The sensible girl need not despair. All sorts of avenues are still open to the girl of pluck and determination. It may be necessary to take a lowly position in order to work her way upward to final success, and the girl who has grit will do this, and thus find the means to train for some special work. Experts will always be needed, and any girl who sets her mind upon it may become an expert in any line she decides upon.

Daily Mail 27 XII 19

Dudley Herald 4. 1. 19.

Manchester Guardian 8. 1. 19

WOMEN'S PLACE IN INDUSTRY.

The difficulties which beset the task of re-establishing the community in full employment—now becoming critical as regards many women—are clearly illustrated in a final report submitted by the Civil War Workers' Committee to the Ministry of Reconstruction. One of the greatest of these difficulties is found in the fact that a large number of people who did not work for a livelihood before the war have acquired a taste for it and an intention to continue in industry. Reconstruction, therefore, is not merely a question of replacement of war-workers by the demobilised soldiers, but of actually expanding the capacity of industry to accommodate the new labour.

The Board of Trade estimates that since July 1914 1,064,000 men have been replaced in industries—other than munitions or Army and Naval contracts—by 878,000 women. If an inquiry made in one Department is typical, the great majority of these women want to go on working. For a variety of reasons even women who took up work for patriotic reasons and are not dependent on their own exertions have no intention of retiring from the labour market. It would certainly ease the situation if such women would take a holiday until labour conditions are more normal. Women to whom employment is a necessity should have the first chance.

The Committee, having stated the difficulty in definite terms, urges that an Advisory Committee be set up to consider the matter of retraining displaced workers and generally of suggesting new or enlarged avenues to employment. It is probable that the impetus to education reform under the new Act may be accompanied with the need for a larger number of teachers. And it is suggested by the Committee that women may find a permanent vocation in some of the departments of labour on the railways which they have occupied during the war.

The gist of the business, however, is that the machine of national production must not only be set going at once, but it must also go at full speed. To solve the employment problem, evidently we have not merely to re-establish industry on the old lines, but to re-create it on new lines which will provide for large and continuous expansion. Employment and production will both fail unless they are considered together as the two halves of an inseparable whole.

STOURBRIDGE ELECTION.

HOW THE RESULT WAS RECEIVED AT LANGLEY.

RT. HON. J. W. WILSON, M.P.

The above photo is given by an arrangement with the "Birmingham Gazette."

STOURBRIDGE (42,405).

*J. W. WILSON (L.)	8,920
Miss Mary MacArthur (Lab.)	7,587
Victor Fisher (Co.Ind.)	6,690
Liberal majority	1,333

The victory of Mr. Wilson was received with much rejoicing amongst his supporters in the Langley district, which has always been regarded as one of his strongholds.. Soon after the announcement was made the hooter at Messrs. Albright and Wilson's works was set going, and this continued for hours, often falling into a screeching noise which represented "Wilson." Immediately the bull started flags were put out of the windows and the Liberal colours became very much in evidence. About 2 o'clock Mr. Wilson paid a visit to the district on his tour of the constituency, being accompanied by his sister, Miss Wilson, and his agent (Mr. E. J. Bagnall). A large crowd met him at the Five Ways, where the motor car made a short halt. The member was the recipient of many hearty congratulations from his followers, and there was a big crush to shake his hand. In a few words Mr. Wilson said he had to thank his staunch and true friends at Langley for once more helping to put him at the head of the poll. He knew that at Langley they had worked hard and he appreciated it very much. He wanted to be the representative once more of all parties, and he looked forward with much hope to the work in Parliament, believing that it would tend to the unity and prosperity of the nation and Empire. (Applause).

Hearty cheers were given for Mr. Wilson, and the motor car drove off in the direction of Blackheath, the member, as it left, standing up in the vehicle and waving the lucky horse shoe which was decorated with his colours, and presented to him by Miss Horton, an Oldbury supporter, a few days before the poll.

The defeat of Miss Macarthur by such a decisive majority came as a staggering blow to many of the supporters of the Labour party, who fondly imagined that she would poll even better than she did. It was impossible to hide their disappointment at the result, but when Miss Macarthur put in an appearance during the afternoon she had a good reception. She delivered a short addredss, in which she thanked them for their work on behalf of herself and the Labour cause. They had been beaten, but she believed that they had laid the foundation for a Labour victory at some future date. She asked them to cheer up as she believed they would soon be in the throes of another election when Labour would have its chance.

CIVIL DEMOBILISATION.

THE WOMEN'S POSITION.

The demobilisation of civil workers has been going on steadily since the middle of November, and the number in receipt of the Government's unemployment donation is growing each week. In the Manchester district there are now some 17,000 persons on the vacant lists of the Employment Exchanges and drawing the grant.

The question is primarily one of women's labour. The stoppage of the manufacture of destructive munitions, the transition from war to peace industry which is following, have thrown many thousands of women on to the labour market. Out of the 17,000 unemployed in the Manchester area, the women number nearly 10,000. In some towns, like the metal-working centres of the Midlands, the closing of war contracts threw thousands of women out of work and caused a simultaneous rush to the Employment Exchanges for registration. There has been little of that in Lancashire. The discharge of munition workers has gone on more steadily. The biggest problem is that raised by the almost complete closing down of the great shell-filling factory near Lancaster with its 10,000 and the aircraft works at Aintree with its 17,000 women. The latter, a finely equipped place, is being converted into a storage depot. But here the unemployment is not purely local, because the workers were drawn from all parts of the country and have now returned to their homes.

All over the country there are other munition works which are dismissing their employees in hundreds. The Government factory for the assembling of American aircraft which was being set up at Hollinwood has been closed. This undertaking, the nucleus of which was the two cotton mills, the Gorse at Hollinwood and the Lilac at Shaw, taken over by the Government in 1917, covered ten square miles of ground. It employed several thousand workers, and the plans were laid for the eventual employment of 12,000. In Manchester one works on shell-making has discharged nearly 3,000 women, and another has discharged 1,700. The men on the unemployed register are for the most part unskilled and semi-skilled workers whose services are no longer required on war contracts. A few hundred skilled men are temporarily out of place, but the number is no greater than in peace-time.

Cotton and Engineering.

The cotton trade, and especially its manufacturing section, is responsible for a fair proportion of the number of workers drawing Government out-of-work pay. The industry is still pinched for raw material, and is running with curtailed production. This, it is to be hoped, is only temporary, for it is largely to the cotton trade that we must look as an absorbent of the women turned off from the munition works, a considerable number of whom worked in the mills before the war. The out-of-work pay continues for thirteen weeks. It is part of the business of local advisory committees to meet the serious position which will arise on the cessation of the grant by helping to secure employment. One avenue seems closed, for there is an understanding in the Manchester district that women are to leave the engineering works before February 1. It has been intimated by the Amalgamated Society of Engineers that after that date its members will not help the women working alongside them. The whole future of women in the engineering trade is very obscure. While the men's unions are determinedly hostile to their continued employment, the women's unions, which have grown very greatly in members during the war, are anxious for lines of demarcation to be laid down to allow of some of the women being kept on.

WOMAN'S OUTLOOK

HER PLACE IN INDUSTRY.

By Mrs. Fawcett.

Mrs. Fawcett, having seen her great object attained in the grant of the vote to women, has just resigned her post as President of the National Union of Suffrage Societies.

I am rather anxious about the question of woman's place in the industrial world. Quite a number of firms seem to be opening their places to women, and this is satisfactory. But I do not desire to see skilled women thrust into semi-skilled branches of work where they would be underpaid. This would have a very bad effect upon these women from the nation's point of view, and would make it impossible to maintain what Lloyd George describes as an A 1 standard of health in a C 3 population.

I am not of the opinion that the "pocket money" girl is at the root of industrial troubles. On the contrary, she may be a great help in the establishment of good conditions for women who are less well off and able to fight. In a similar manner doctors who have private means have helped to sustain a certain standard in the medical profession below which others could not go.

Nothing can be expected from Government pledges to Trade Unions, and it is equally impossible to reinstate Trade Union conditions. The whole type of machinery has been entirely altered, and needs reconstruction. I would suggest a series of meetings between Trade Union leaders and members of the Government, in which they could come to a fair decision and, in fact, literally arrive at a quid pro quo.

Women and the Civil Service.

I recall a certain similarity between the situation of these demobilised women and the position of the Suffragettes a few years ago. Mr. Asquith had promised to support us by introducing a certain amendment into a Reform Bill which supported representation of the people. If it had been passed we should have gained the day.

When, however, this Bill was introduced, the Speaker ruled the amendment out, for it was incorrectly framed. Mr. Asquith was thus unable to fulfil his pledge to us. He endeavoured to make amends by giving a special day to a private member's Bill, but this, as we well knew from experience, was useless. In an equal way the Government is unable to fulfil its Trade Union pledges to demobilised women now. In this respect it is bankrupt.

I am of the opinion that now women are voters it will be much easier to remove and amend certain laws pertaining to women's affairs—such as giving the married woman a right to her children. Moreover, before the election, Bonar Law and Lloyd George removed all disabilities from women, and thus made their entry into the legal and Civil Service professions possible. The latter has, of course, been open to women during the war, and they have held temporary positions, sometimes of importance. But as yet there is no real channel through which a woman can enter the Civil Service. The examinations are debarred from her, and if she is successful in obtaining promotion it is usually through influence. It would surely be erroneous to suppose these matters will not be influenced by the number of women voters.

Political Outlook.

I think that women's outlook in political life is extremely satisfactory. Considering the short time the women candidates had to enable them to campaign, the results were favourable. I have heard that Miss Mary Macarthur was not allowed nomination under her maiden name, but was obliged to use that of her husband. So many of the electors knew her as Miss Macarthur, and did not know her as Mrs. Anderson, that it was probably very detrimental to her chances of success. On the other hand, Miss Violet Markham, who is Mrs. Carruthers, was allowed the privilege of using her maiden name at Mansfield. This is an important matter which must be set right for future occasions. I did some public speaking before the election, and I was able to note the keen interest the women took in it, how they followed the different points, and what good hecklers they proved to be.

HUNGER IN CENTRAL EUROPE.

A "FIGHT THE FAMINE COUNCIL."

A correspondent writes:—

The sufferings of the peoples of Central Europe from the shortage of food—especially the sufferings of infants and very young children from the lack of milk—are certainly not realised in this country. This is partly due to the fact, no doubt, that many of the English and American correspondents, newspaper and other, who have sent home accounts of the food position in Germany and Austria have stayed in hotels where food for adults, at all events, seems to be fairly plentiful. Their reports, therefore, have been coloured, naturally enough, by their own quite tolerable experiences.

In order to inform public opinion in this country as to the extent of the suffering in the defeated Empires, to help on measures of relief, and, above all, to hasten the relaxation of the blockade, a body called the "Fight the Famine Council" has been formed by a number of men and women distinguished for their social services and public spirit. The members of this Council include Lady Courtney of Penwith, Miss Mary Macarthur, Canon Barnes, Dr. Clifford, Lord Parmoor, Lord Henry Cavendish Bentinck, Principal Garvie, Mr. Jerome K. Jerome, Mr. George Lansbury, and Mr. Arthur Sherwell. They have already collected much information from trustworthy sources as to the gravity of the food situation in the two countries, and they are doing their utmost to arouse public opinion here as to the urgent necessity of relieving it.

CORRESPONDENCE.

WORK FOR WOMEN.

Sir,—Will you please insert this letter with reference to the article headed "Work for the Women," and more especially with regard to the paragraph stating that the girls who have been doing clerical work in the Ministry of National Service Department are the hardest to please. From my own experience, I know the great majority of the girls who were employed at the Leicester area headquarters of the Ministry of National Service, were those who left in some cases more remunerative employment in offices, because they felt it was up to them "to do their bit." Since being unemployed I have met a good number of my late co-workers, and so far from it being true that the women are not keen on working for themselves as long as they are able to receive 25s. a week from Government for doing nothing, I find they are all "fed up" with having nothing to do, and it is only through there being no situations vacant at the present time that these girls are still unemployed.—Trusting this will help to eradicate the wrong impression caused by the article, yours faithfully,

ONE OF THE HARDEST TO PLEASE.

WOMEN'S INDUSTRIAL LEAGUE.

A good start has been made in the organisation of the Women's Industrial League. Application for membership has poured in from wood workers, machinists, tool setters, varnishers, solderers, gaugers, storekeepers, inspectors, instrument assemblers, clerks, charge hands, forewomen, welfare supervisors, and lady superintendents and others. Local committees are being formed in all industrial centres. The address of the League is No. 1, Central Buildings, Westminster.

WOMEN'S INDUSTRIAL LEAGUE.

A good start has been made in the organisation of the Women's Industrial League. Application for membership has poured in from wood workers, welders, machinists, tool setters, varnishers, solderers, gaugers storekeepers, inspectors, instrument assemblers, clerks, charge hands, forewomen, welfare supervisors, and lady superintendents and others. Local committees are being formed in all industrial centres. The address of the League is No. 1. Central Buildings, Westminster.

Bulletin Glasgow. 11. 1. 19.

WOMEN'S PAY DAY

How Munition Girls are Paid Their Out-of-Work Benefit

Glasgow's out-of-work women are paid their 25s unemployment benefit each Friday at the temporary Employment Exchange which has been opened at 75 Montrose Street as a centre for discharged women war workers.

A representative of "The Bulletin" visited the Exchange yesterday, and found payment in full swing. It is a huge task but is well managed by the Exchange officials, special arrangements having been made to deal with the women as rapidly as possible.

So large is the number of claims, however, that from ten o'clock in the morning until seven in the evening a constant stream of women passes through the Exchange. Last week about £1800 was paid out.

A Waiting Queue

The Exchange is in the Technical College buildings, a large lecture hall having been taken over for the purpose. Along one side of the hall forms are placed three deep, and on these the first arrivals sit and wait their turn. Outside, down the whole length of a long corridor, there are more forms, arranged schoolroom fashion, and here more women sit in furs. The last-comers stand in a queue on the street, and are admitted as the forms empty.

Many of the women carry books or work to while away the waiting time, and some of them have infants in their arms.

The method of payment is simple and expeditious. The women are called up in alphabetical order, according to their names, the pay counter being divided into departments—A to C, D to G, and so on, with a special section for the "Macs," who are a numerous class. They present their insurance cards, which are stamped with a special mark to prevent the possibility of any woman drawing insurance money as well as unemployment benefit. Then they sign a policy book which the Exchange holds, and pass on to another desk, where they receive their money.

The behaviour of the women, so far as observed by our representative yesterday, was most orderly.

Star. 28. 1. 19.

Women Comrades: FRIENDS OF THE DEMOBILISED SERVICE WOMEN.

One of the newest organisations for Service women is the Women's Section of the Comrades of the Great War, about which Lady Greenwood, the charming wife of Sir Hamar Greenwood, M.P., has been telling me. Lady Greenwood is chairman of the Headquarters Committee in London at 8, Grosvenor-square

"Briefly, our objects are to further the interests and look after the welfare of all members and ex-members of the various Women's Services and the mothers, wives, widows, sisters, and daughters of soldiers and sailors—not their aunts.

Stranded Waacs and Wrens.

"At present a considerable amount of our work consists of looking after the welfare of demobilised Service women—Waacs, Wrens, and such like. In a good number of cases when girls are discharged from the Services they are very badly off—many of them have no means, no prospect of employment; practically no clothes, since the whole of their uniform clothes have to be returned to the authorities; no home in which to seek safe shelter; while some girls are in so bad a physical state that it is impossible for them to do anything but rest for some weeks after the time of their discharge. These we help, so far as is in our powers and according to their particular needs, and up to the present the Women Comrades have been able to render considerable help to ex-Service women.

"One thing I may say in this respect is, that we intend to try hard to obtain a recognised system of State pensions and gratuities for women of the various Services.

Fighting for Pensions.

"Again, the Women Comrades have helped many women dependents of soldiers and sailors to obtain what is due to them in the way of gratuities, pensions, and so on. Some women do not know a bit what money is due to them, or how to set about getting it—in such cases, we find out exactly to what they are entitled, and show them how to obtain it. Moreover, there is no doubt that some women get such matters attended to much more quickly when the Departments concerned know that they are supported by the Women Comrades than they would if they took up the matter entirely on their own.

"Another, and a very important section of our work is that which deals with Maternity and Child Welfare. We hope to develop this branch very much in the near future, for there is very much that women can, and should, do in this direction. We aim at helping women who need assistance and advice; women who are only too eager for their own and their children's welfare to be looked after, if only the right people will give them a helping hand; women who in many cases are able and anxious to pay for such assistance, and who need wise guidance rather than 'charity.'

"There, again, we have an employment bureau, also a lodgings list, from which we can 'turn up' addresses in all parts of the country for the benefit of travelling members."

AIMS ON THE NORTH-EAST COAST.

703

By Our Lady Contributor.

Four years and a half of energies directed towards saving the world for mankind have accumulated problems which require the exercise of the best minds of all nations and the patience of peoples, if they are to be settled satisfactorily. Not the least of these problems concerns adult education. We may all regard ourselves as the children of a new era, and as such our minds require a new balance and a readjustment. Also, youth at the outbreak of Armageddon is now manhood and womanhood and childhood adolescence.

Education was not vital to the actual winning of the war, but now that it is won and the League of Nations all but an accomplished fact, it is essential that education in all its branches should receive a stimulus, for it embodies the power to raise to the required status the citizenship which the new era demands. It may be said without ostentation that there is a North of England keenness about the new schemes for adult education which are anticipated as the outcome of the new Education Act. Adult educational settlements are already established at Lemington, York, Sheffield, Leeds, and Birkenhead, and their object is the making of better citizens.

LIGHT IN THE VILLAGES.

Lemington is just far enough away from the town to be deprived of its educational facilities. The social needs of rural populations have up till now been relegated to the background, although it must be admitted that their claims to social and recreative scope were greater far than those of the urban population because of their isolation. It is this axiom which has decided the Y.M.C.A. to plant their army huts in 1,000 villages.

Here let me say a word in appreciation of what the Workers' Educational Association is doing to try to meet the demand of those who, having passed the Rubicon of elementary education, feel that they remain ignorant either from neglected opportunities or lack of them and desire to retrieve their latent possibilities. The Association commands the services of the best lecturers and teachers, and is supported by the mining, engineering and industrial associations throughout the country.

The Board of Education recognising the great field of labour covered by their effort and sensible of the difficulties to be overcome allow a grant of £30 per class which has recently been increased to £45. Affiliated societies pay a minimum fee of £1 1s. and local education committees frequently make a grant in support of the work. Wherever a class of 20 or 30 can be formed the W.E.A. endeavours to meet their needs by supplying lecturers and rooms. Some districts have special women's committees and classes. This leads up to the great problem fronting the Ministry of Labour with regard to munition workers.

WOMEN'S TRAINING CENTRES.

Through the courtesy of an officer of the Ministry of Labour I am informed that it is the desire of advisory committees to establish training centres for the young girls whom they recruited straight from home life at the various stages of the war for munition work and who have no adequate training for any sphere whatever. A period of service of young boys in the army is being met with by concessions of various kinds, it being realised that this period of service has handicapped them in ways which are too numerous to detail. Munition work, like soldiering, died with the war, and the Ministry of Labour recognises a certain responsibility to this younger class of worker, and desires to give them adequate training of some sort which will retrieve any wage-earning capacity they may have lost. The difficulty which confronts them is primarily the financing of such schemes, and secondarily the maintenance of a regular attendance, an essential condition of securing any grant from the Board of Education. The Education Committee have not provided adult education with the exception of the technical classes at Rutherford College and although the new Education Act provides for adolescents up to the age of 16 it does not go beyond that. The matter of attendance is no light one.

AN UNEMPLOYMENT CANVASS.

All the unemployed women would have to be canvassed with a view to finding out what percentage of them were willing to undergo a course of training and to put in a regular attendance for at least 12 lessons which constitutes a short course. If such a training, say at least two hours a day, could be made conditional to the retention of the unemployment benefit the attendance might be secured.

As for training centres, the Northern Counties School could accommodate many of the classes, and I understand that Miss Rotheram is not only willing but anxious to do something in this work, work for which she is so peculiarly suited. The Workers' Educational Association does not generally undertake any special branch of training, but co-operation between elementary and adult education might help in the solution of the grants and secure enough to at least formulate a scheme and give it a trial. All sections of the community are being offered at this unique time facilities to accomplish that in which they have been handicapped.

Training of all kinds is the crying need of the hour—training for wounded, disabled, unemployed, uneducated, change of work, etc., etc. If the world is saved for democracy, democracy must save itself by an intelligent grappling of things moral and by working in unison and with patience to make our inheritance worthy of its price.

WOMAN WHO WANTED WORK.

It is refreshing to know that the spirit of independence has been decadent, not extinct, and that in the case of one woman at all events it has reasserted itself in a striking manner—a manner which many of her countrywomen might emulate. She could have claimed the unemployment donation but refused it saying she wanted work, and insisted on having it. The work offered to her was that most debatable class of unemployment—domestic service. It was readily accepted and the mistress who is fortunate enough to get that woman will undoubtedly admire her spirit and make her life in keeping with it. Idleness can never elevate. The keenest minds are those whose every faculty is alive to the code of laws regulating a healthy development, not the least of them being "man must work."

Daily Sketch 1.2.19. 702/112 702

"IF A WOMAN WERE PREMIER!"

Famous Suffragist Leader Shows How She Would Solve The Strike Crisis In Britain.

FEWER HOURS: INCREASED OUTPUT.

By **CHRISTABEL PANKHURST**, the Leader of the Women's Party.

HOW to stop the strikes! Above all by *Education* — by making the mass of the workers, who are good patriots and good citizens, realise that the way to win a shorter week is not to strike for it, but to work for it!

Industrial unrest has, throughout the war, been a matter of great interest to the Women's Party, who worked to prevent and cure those war-time strikes which sacrificed the soldiers' lives and jeopardised victory by holding up munitions supplies.

The war is now ended or suspended, but strikes continue, and are hardly less welcome to the enemy!

MISS CHRISTABEL PANKHURST.

A Plea For Shorter Hours.

The bone of contention in the present strikes is—shorter hours! Now, we of the Women's Party are pioneers and enthusiasts in the cause of shorter hours for the industrial workers. We have demanded shorter hours for the worker in the following terms:—

Short working hours, or, in other words, ample leisure, in order to compensate for the comparatively monotonous nature of his work, and in order to give him ample time to be master of his own actions and compensate for his willing acceptance (for the common good) of authority and discipline while he is at work. Of course, a shorter working day—for example, a six-hour day—is impossible if production is to be decreased in consequence. But it is certain that by the abandonment of all forms of slacking, by greater discipline, by better organisation and method, and greater use of power and machinery, more wealth could be produced in a shorter day than is now produced in a longer day.

These words show that the Women's Party, though opposed to the present strikes, is not opposed to, but is ardently in favour of, a short working day.

Bolshevik Wreckers' Tactics.

But we support it on two conditions. One is that this cause of shorter hours shall not be exploited for wrecking purposes by the Bolsheviks, who, if a forty hours week were established, would urge the loyal majority of the workers to strike for a 30-hour week, then for a 20-hour, or, indeed, a no-hour week!

We claim, in the second place, that the shortening of working hours must not bring about a decrease in goods produced and services rendered. Because, otherwise, the whole community would suffer, and the standard of living of the masses, instead of being raised, as it requires to be, would be lowered!

We of the Women's Party have set out to abolish poverty, and to democratise prosperity by bringing within the reach of the masses the comforts and refinements of life that have hitherto been the monopoly of the few.

Therefore, we demand that side by side with the shortening of the hours of work there shall be an increase in the productivity of work.

This can be achieved if the workers—

Not only agree to, but actually insist upon the use of new machinery and every kind of invention and improvement in organisation and management that will increase the productivity of labour, and so make it possible for the workers to produce more wealth and render more service to the community in a shorter week than they formerly did in a longer week.

The Bolsheviks are opposed to this idea.

Ignoring The Facts.

They wish the British workers to ignore the truly appalling fact (which in itself accounts for the existence of poverty) that—

"In the United Kingdom in 1907, according to the Census of Production, page 19, *the average 'net output per worker' was* £102 *per annum*, and since this sum has to provide not only the wages of the worker, but also establishment charges, including interest on capital, it is clear that the average wage must be something very much less, probably little more than half."

The Bolshevik blinds the British workers to their own real interests by saying that increased wealth production would mean "overproduction"—unemployment; whereas the truth is that the standard of living of the masses cannot be raised unless there is more wealth to go round and if that standard were raised to what it could and ought to be, the *increased consumption* of wealth would be such that every effort of every available worker, man or woman, would be needed to make wealth production keep pace with wealth consumption.

The Wife's 40-Hour Week.

One more point! The cry for the 40-hour week rings out loudly through the land.

But the Bolshevik strike promoters have not announced what arrangements they have made to give the wife at home a 40-hour week.

They perhaps intend to devote some of their extra leisure to doing the family wash and cleaning down the house.

What is sauce for the gander is sauce for the goose, and shorter hours are at least as necessary for the woman who works at home as for the man who works in the factory.

The new housing schemes ought to lighten the drudgery and shorten the hours of the housewife by such methods as a central hot water system, central laundries and kitchens, and the supply of cheap electric power and appliances.

We of the Women's Party call upon the people of this country, without distinction of class, to unite in thinking and working, not striking, to secure for the toiling masses the leisure, comfort and refinement that are the birthright of all British citizens.

WOMAN'S NEW PLACE IN THE WORLD.

OPTIMISTIC VIEWS OF MRS. HENRY FAWCETT CONCERNING THE FUTURE.

POTENT NEW FORCE IN POLITICAL LIFE.

After the greatest war in history—where does Woman stand?

Mrs. Henry Fawcett, who has devoted half a century's work to the progress of women, answers the question in the interview below, recorded by Mr. Harold Begbie.

By Harold Begbie.

At the outset of our conversation I assumed the aspect and tone of a pessimist. I suggested, as politely as possible, that everything was going categorically to the dogs. Europe had been consumed for over four years by a conflagration the like of which no generation had ever known, and at the end of it all the old selfishness remained, the old class differences asserted themselves, and morality, painting her face and pulling on gilt slippers, was off for a fox-trot with old red-nosed mammon at a night club. Anti-climax if ever there was one!

It was charming, the way the lady crept behind my mask.

I never knew optimism so soft-voiced, so modest, so insinuating. Before I knew where I was I was saying "Quite so" and "How true that is" to everything the lady said; and the lady was talking optimism, pure optimism, nothing but optimism, and with a light of confidence in her eyes, a smile of profound enjoyment on her lips; but it was optimism without truculence, without self-assertion—optimism born of deep knowledge and long, hard-working experience. She is a little brown lady, with small twinkling eyes, a smiling mouth, a low voice, and a skin netted all over with fine wrinkles.

"I am immensely proud," she said, gently, "immensely, of the young woman of our day. I think she is a splendid creature, quite a splendid creature. Think what she has done in the war! It is not a flourish of rhetoric to say we could not have won the struggle without her: it is a fact. The young women of our country have helped to save the world, and without them it could not have been saved. They are magnificent, our young women."

MORALS AND MANNERS.

"Yes," said I, behind my mask, "that is true; but is there no falling off in moral quality?"

"I call it moral quality to stick at hard manual labour all day," replied the lady. "Work is a very good test of character, if you ask me."

I spoke about the noisy vulgarity so common in our ugly modern streets.

"Isn't the way in which we show our relief after a hard day's work," she answered, "merely a matter of class? Noise and larkiness may not be altogether pleasant; but I don't regard them as matters for anxiety. Education will get rid of little things of that nature."

"You are determined," I said, "not to be converted?"

"Converted to what?" inquired the lady.

"The fashionable religion," said I.

"What is that?" she demanded.

"Pessimism," I said, firmly, or rather with a show of firmness.

"Oh, dear no; I'm not a pessimist. On the contrary, I think that all the evidence points clearly in the opposite direction. Men and women are growing better. That's progress."

"WOMEN IN PARLIAMENT.

"These strikes?" said I, shaking a portentous head.

She answered at once: "Are they not merely an indication of mental reaction? The strain of the war has been terrific. People talk of high wages earned by the workers during the last few years; they forget the great physical and mental strain these workers have endured. I think we must expect outbreaks of this kind. I am sure it is a mistake to exaggerate their significance. Things will settle down. It will take time; but we shall settle down. We shall pull ourselves together, and proceed to build up a better State, I'm sure we shall."

"In which women . . . ?"

"I am not depressed," she said, "by the defeat of our candidates. Women came too suddenly before the electors as legislators. There was no time for real canvassing. It will be different at the next election."

"You think women can make a real contribution to our political life?"

KAISER'S VIEW OF WOMEN.

"There's no doubt of that. Take the case of infant mortality. The two countries which show the lowest rates in this respect are countries where woman's political influence is highest—New Zealand and Norway. It is interesting, too, to remember that the countries in which, legislatively, women occupy the lowest place are Germany, Austria, and Turkey. That, I think, is very significant. I am extremely glad to know that German women have now got the suffrage. I think it may make a considerable change in the politics of Central Europe. A friend of mine amused me very much by narrating to me a conversation she had enjoyed with the Kaiser on his yacht during the Kiel Regatta a few years ago. He quite blazed up. She had introduced the notion of woman's political equality with man. The Kaiser exploded! The idea of woman's suffrage annoyed him extremely. It was like a red rag to a bull. Militarism, of course is the antithesis of woman's suffrage. The women of Germany ought to be forces on the side of sanity and peace.

HAPPIER HOMES.

"No: I am hopeful of the future. I think the moral character of nations will be greatly changed by woman's influence. Look at the old books and see how we have already moved from a morality which is now almost unthinkable. Do you remember in 'Pamela' how the virtuous woman is chased by the rake, first here, then there, until at last, convinced that her virtue is unconquerable, he proposes marriage to her, at which she falls upon his neck and her parents shed tears of joy! Imagine such a thing in these days! All the old books bear evidence of a much lower idea of morality than exists to-day. Woman's influence makes for a far higher moral standard. I am sure of it. It seems to me perfectly certain that the relations between the sexes will improve, that the moral life of the nation will be purer, and that domestic happiness will get more and more strength the more women's political power is brought to bear on legislation."

"Religion," I said, "seems to be losing its influence."

"I wonder," she replied, "if that is true. Dogmatic religion certainly seems to exercise less power, but I rather think there is something like a new attention in the general sphere of religion."

"But surely that is only among the educated? The great bulk of the people, abandoning dogmatic religion,, seem to abandon religion altogether. They can't be bothered by it. And without religion of some sort. . . ."

"Well, I cannot say whether this is true or not. My work lies chiefly among the older people, and there I find that religion maintains its hold."

"In fact, you are undismayed by the evils of this present time?"

"I think I see those evils as clearly as other people, but I see also the abounding good which is everywhere, in my view, overcoming those evils. Think how great and beneficent is the change made in our industrial life by the influence of women;

MRS. FAWCETT.

[Elliott and Fry.

it has created a new industrial conscience. Social welfare has become a force in our industrial life, thanks to the magnificent efforts of women. But the character of woman has itself been powerfully changed in these last years. That is a most important consideration I know a case of two girls who left a comfortable home to do real hard war work. The other day their grandparents, with whom they lived, inquired when they would return to the peace and luxury of their home. They replied that they had learned to support themselves, that the feeling of independance was precious to them, and that they proposed to go on working for their own livelihood. That means a new moral dignity.

MODERN POLITICS.

"The communal idea, too, has made enormous progress during the war. Young girls are finding a new definition of life in the struggle for existence. I think a much higher type of womanhood is in process of creation. And a State that can boast a noble womanhood need fear no inner danger. Oh, yes, I am an optimist."

I made one final shot. The character of our political life, surely that has lost something of its old nobility, something of its old honesty?

She said she did not profess to know very much about modern politicians. "I am told," she said, "that Mr. Lloyd George is a man not to be trusted. I reply that nine days after he had become Prime Minister he caused a message to be sent to me assuring me of his intention to press forward women's suffrage. He fulfilled that promise. My experience of Mr. Asquith is not so happy. He led us to suppose that our efforts were to be rewarded; he made distinct promises to us. Mr. Lloyd George rated us at the Albert Hall for not seeing the infinite importance of these promises; but they were never fulfilled. I judge men by their actions. Mr. Lloyd George has done more than any other man to secure the triumph of liberty and democracy in the war, and so far as I am concerned, he has kept his word."

MEMORIES OF GLADSTONE

Daily Chronicle

18/2/19

MEMORIES OF GLADSTONE.

This led to her memories. She told me that her husband, the blind Postmaster-General, never liked Gladstone, and never felt that Gladstone trusted him. To Professor Fawcett, the noblest man of that age was John Stuart Mill—a most lofty soul whose very presence diffused a moral atmosphere in which men felt that they breathed the airs of heaven. In matters of finance, Professor Fawcett used to say Gladstone would go as far as he was allowed: but in matters affecting the liberty of the human spirit he would go only as far as he was driven. John Stuart Mill loved liberty like a mistress.

To Mrs. Fawcett, as well as to her noble husband, liberty has ever been the sovran music of human life. She has worked for humanity to this one end, worked that humanity might be free—not merely free in a political sense, but free in the individual soul of man and woman—believing that the essential good of humanity would preserve it from the anarchy of license.

It is good that youth, entering into its inheritance of freedom, should remember how that heritage was won for them by brave women and good men, who faced the scorn and derision of their generation because they believed in liberty. Mrs. Fawcett has turned 70, and she was a suffragist at 20.

Half a century of faith, half a century of work, half a century of courage, is her contribution to the progress of women. Never once did she stoop to violence, and never once lose faith in the triumph of her cause. I went out from her presence cleansed of the leprosy of doubt. All's right with the world.

FEMALE "SLACKERS AND SHIRKERS."

MISS MACARTHUR'S VIEWS.

Miss Mary Macarthur, speaking at a meeting of the National Federation of Women Workers, said they had been told that the women who had toiled so strenuously during the last four and a half years had become slackers and shirkers, and preferred to receive a dole of 25s. a week rather than take up domestic and other work.

There was no doubt that a large number of women were receiving the allowance who were not entitled to it, just as the giving of it would never solve the question of unemployment amongst women who wanted to work, but refused to become the slaves of capitalism. Women wanted a new life and the privilege to enjoy it.

LETTERS FROM OUR READERS.

PROBLEM OF WORKLESS WOMEN.

To the Editor of the "Daily Express."

Sir,—In the manifesto of the Labour Party, published on November 28, 1918, and signed, among others, by Mr. Henderson, Mr. Clynes, Mr. Robert Williams, Mr. Ramsay MacDonald, and Mr. Snowden, was the statement that its "programme is a challenge to reaction." Then it makes the following assertion:—

"The Labour Party stands for complete adult suffrage, in industry for equal pay, and the organisation of men and women in the trade union movement. There must be no sex party. The Labour Party is the women's party."

As this is a definite statement of policy, may we ask the signatories how they make this agree with the present state of affairs? All over the country women have been thrown out of work as the result of the action of various trade unions. Has the Labour Party made any protest to the unions?

Women knew they must come off shell and fuse work, and they were prepared gladly to give way to soldier and sailor returning from the war, but, after making full allowance for unemployment from these causes, there remained thousands of women who should have stayed in the various works. For these women there is nothing but starvation as out-of-works or semi-starvation in badly paid occupations.

Will the Labour Party explain their manifesto in face of the action of the various trade unions? What have they done for the women? At the beginning of February do they still make the claim to be the "women's party," as at the end of November? The thousands of capable women now besieging the doors of the employment exchanges are interested in their reply.

AMY LILLINGSTON,
Press Secretary.

Women's Industrial League,
1, Central Buildings,
Westminster, S.W.1.

II.

To the Editor of the "Daily Express."

Sir,—I see in Saturday's "Daily Express" that Lady Rhondda says there are 1,500,000 women out of work. I should like to inquire if she has ascertained if all these women are really in need of work? In all the Government offices there are numbers of married women, whose husbands are in good posts and quite able to keep them. These women make no home, live in expensive furnished rooms, and utterly ignore "the cause for which matrimony was ordained." Another class are the widows with pensions and no children. If these two were not allowed to take the work it would make room for the unmarried women who are bound to keep themselves, and in many cases help to keep the home together. Lady Rhondda speaks of further money doles from the Government. Surely these doles are a curse to the country. Take domestic service and laundry work only. Women will not take either as long as they are paid to say there is no work.

Hampstead, N.W.3. A WOMAN.

III.

To the Editor of the "Daily Express."

Sir,—Lady Rhondda states that at present there are more than half a million women workers who are receiving unemployment allowances, and any one with a knowledge of human nature can easily imagine they will continue to do so as long as possible. She also states that there is probably an additional million of women workers out of employment. Would it not be possible for, say, half a million of them to assist half a million householders by offering themselves for domestic work? I purposely refrain from using the word service, as I am informed it is considered derogatory to their position. I feel certain that if they did they would be received with both open arms and doors.

THE OUT-OF-WORK DONATION.

A MILLION A WEEK.

WOMEN AND DOMESTIC SERVICE.

The number of unemployed persons receiving the out-of-work donation on February 7, the latest day for which complete returns are available, was about 735,000, and the weekly cost to the Treasury must now be close upon a million pounds.

Present indications are that unemployment will further increase, though not, perhaps, to any alarming degree, and that the charge on the national funds will correspondingly become greater. Whatever is happening in Ireland—and it is possible that Sinn Fein is making political use of the situation in that country—the general administration of the donation is, we understand, being closely watched. Labour leaders in fact are complaining that women are being forced to take work against their wishes. It may be said that the additional number of out-of-work donation policies lodged in the first week of February, a number rather more than 55,000, is the smallest recorded since the system came into operation.

A noticeable feature of the latest additions to the volume of unemployment is that the persons affected are chiefly engaged in the uninsured trades. A continued increase is reported, however, in the building trade, and here an early improvement ought to be seen. Generally speaking, women are finding more difficulty than men in securing fresh work, but more women are now turning to domestic service, and a development of this movement may make the situation easier.

Analysis of the statistics is available only to the end of January. At that date the total number of unemployed persons whose out-of-work donation policies remained lodged at Employment Exchanges and had been signed during the preceding six days was 678,703. Of these 625,149 were civilians, and 53,554 were demobilized members of the forces. Of the civilians more than two-thirds were women and girls. A comparative statement published in the *Labour Gazette* shows that of the total number of unemployed on January 31, 112,946 were registered in the London district, 102,578 in the West Midlands, 128,613 in the North-Western area, 62,907 in Scotland, 59,093 in Ireland, and 58,583 in Yorkshire, the remainder being spread over other parts of the country. The number of policies lodged by civilians increased by over 60,000 in each of the first three weeks of the month, and by over 80,000 in the last week, the greater increase in the last figure being due mainly to the increase in the number of women who became unemployed. The number of policies lodged by soldiers and airmen increased less rapidly at the end of the month than in the first half.

According to available records the total number of payments of out-of-work donation during the five weeks ending January 31 was 2,452,820, a weekly average of 490,564, of which 439,626 went to civilians, and the average weekly amount paid in the same period was £614,099. Unemployment was heaviest in the ammunition and explosives industry, which returned 20.80 per cent. as out of work. In the engineering and ironfounding trades the percentage was 13.06, an increase of 12.26 over the figures for the week ending January 25, 1918. There was a 10.39 percentage of unemployment in saw milling, and a 7.10 percentage in building.

REC. 15/3/19

WORKLESS WOMEN.

The Press secretary of the Women's Industrial League sends us to-day a letter attacking the Labour Party because, apparently, the cause of the women has been neglected by the organised male workers. In November 1918 the Labour Party stood for "complete adult suffrage, in industry for equal pay. . . . . The Labour Party is the women's party." Now, say the women, when the weaker sex is being thrown out of employment in the munition works the Labour Party makes no protest. More, the women say that all over the country women have been thrown out as the result of trade union action. Consequently the Women's Industrial League wishes to "show up" the selfish trade union males. Is this not a trifle far-fetched? What were all these women doing early in 1914? Were they in munition works? Of course not, for we were at peace, and the majority of the women who now find themselves out of employment were engaged in domestic work of some sort or other. Is domestic work so degrading that they will not go back? Or is it that high wages in munition factories have dimmed the desire to preside over the casserole, the toast rack, or the sewing machine? Domestic service has its drawbacks—and its advantages, which latter, many say, far outweigh the former. All women are not domestically and servitudinally inclined, but we still fail to see why there should be an outcry against the unemployment of women when there are so many women's jobs still to be had. This is an unpalatable truth for the women, but facts are facts, and must be faced.

How to Become a Hotel Hostess.

OPENING FOR BUSINESS WOMEN.

Human Note.

By PEGGY PATTERSON.

"Start a decent seaside boarding house!" said somebody who had suffered much a couple of years or so back, when circumstances forced my mother and me to look round for ways and means of earning a living. It was jest, of course, but jest led to earnest action. We did not set up a boarding-house, in the common construction of the words, but we did journey to a well-known south coast town, rented two big "next door" houses in the best position we could manage, and risked the bulk of our capital in starting a private hotel.

It was entirely a venture; we had no business experience and no special influence to bring us a connection. We only knew what people wanted, or thought we did! The results were, and are, such as to make us bless the luck which followed us, and we urge other women to follow in our footsteps, if they have the desire and capabilities to do so.

Qualifications.

Women with good business instincts, general "managing" powers, catering competence, all-round tact, some social experience, good temper and good manners, together with a small capital, can make big profits by running private hotels—with comparatively easy work after the first efforts. There are great openings in this direction for educated, far-seeing women with ideas and initiative. What was done in Paris by the English madame, in one of Bennett's novels—I forget all names for the moment!—can be done in England, with equal profit and success, by the right women. We have proved it.

Any woman who has practical experience in house management of a general order, has the chief qualifications for the work "ready made." That was the training on which my mother and I relied. Business faculties, of course, are included, for no housewife can be counted a good manager unless she has a grip on the £ s. d. of catering and management.

Choice of locality is important. Seaside resorts or places on good motoring roads are most advantageous. It is a matter for careful thought and personal discrimination, but usually it is bad to aim at isolation. We started our venture in a spot where ordinary hotels and boarding houses jostle each other in the streets. Much might be done in many cases by taking over defunct or comatose hotels or inns, and reconstructing them on up-to-date lines—provided that the locality is promising and easy terms of transfer can be arranged. Such matters might be fixed on a working partnership basis.

Secret of Success.

We aimed at creating the human note in our hotel; we strove to give the place a personality. That is what the public wants. The hotel hostess can only succeed when the furnishing, catering, and all else—including herself—suggest an excellently-run private house: when visitors express surprise and say, "But this isn't a bit like an hotel, you know!" Any one who starts by visiting a lot of hotels "to get hints" for imitation—as one woman did—is not likely to "make good." People are tired of red plush and gilt and printed rules and charges for wall decorations.

It would surprise you all if I were to quote some of the charges at our own modest place. We have again and again to put up charges to check advance bookings, but the plan rarely acts.

There is no doubt about the openings here for women, and what two women have done others can repeat. Any woman who looks to the work must realise from the beginning that her hotel must be part of herself—she must get her personality into her establishment if real success is to be attained.

SCANDAL OF THE GIRL SH

EMPLOYER SAYS STATE BENEFIT KEEPIN WORKERS FROM ACCEPTING JOB

SHELL LASSIES' DRAMATIC DE

[By OUR SPECIAL COMMISSIONER.]

Are girls abusing the payment of unemployed benefit on a generous scale? There are two sides to this question, but, in the public interest, it must be investigated.

Already it is estimated that the number of unemployed in the country runs well into one million, and the figures are rising every day.

Starving industries, crying for raw material, have not yet been set in operation. The great industrial machine is creaking painfully as it accommodates itself to the period of transition.

Hundreds of thousands of soldiers are being demobilised and are returning, after four years of bloody conflict, to take up the tangled threads of their pre-war tasks.

The Peace is not yet signed; war still rumbles ominously in the East, and Europe groans under the lacerating wounds of the greatest catastrophe that ever fell upon Western civilisation.

Truly there are problems here to turn our statesmen into nervous wrecks without any worry about home affairs, and yet this problem of the unemployed is one which must be dealt with at once.

From conversations I have had with representative employers throughout the country, I find that they view the situation with grave concern, if not, indeed, with genuine alarm.

TIME FOR CONSTRUCTIVE WORK.

"Thousands of girls," said one manufacturer who employs women's labour on a large scale, "are undoubtedly tempted to slack by the scale on which the present payments are being made. One must remember that very many of these girls were making exceedingly high wages before the war, that their living expenses, compared with other classes, were small, and that they often enjoyed in addition the benefit of living at home with their parents, who did not charge them more than 12s to 15s for their board and lodging.

"It is easy to calculate what must have been 'put past' here when the average wage was £2 10s to £3 or £4. Added to that fact it should be remembered that often three or four in one family earned these wages. Just the other day I heard of a case in which three girls in a family were bringing in their 25s unemployed benefit while the father was in a good position earning £5 10s per week, so that the family's total income was nearly £10 per week! Within a stone's throw of the tenement where they lived another family resided, a father and mother with three young children of school age. The father, who was engaged as a despatch clerk in a large warehouse, earned £2 15s per week, with which he had to feed, clothe, and house his wife and children and incidentally pay towards the upkeep of his better-off neighbours.

"The sooner the Government get away from this payment of doles and set really constructive work agoing, the better for the country. Let me add," said this captain of industry, as he tapped the desk in front of him with gold-rimmed pince-nez, "that while we have no desire to see lower wages, or the worker's conditions adversely affected, sooner or later these payments will become as great a scandal as the workshops of Paris in the days that followed the revolution."

This expression of opinion I found quite typical of the employers in the trade generally. Again and again it was pointed out to me that girls of seventeen and eighteen were drawing 25s and that these girls under normal conditions could not be given employment at that wage without making the business bankrupt.

READERS' OPINIONS

WOMEN AND LABOUR,

(To the Editor of the Leeds Mercury.)

Sir,—In the Manifesto of the Labour Party published on November 28th, 1918, is the following assertion:—

"The Labour Party stands for complete Adult Suffrage, in industry for equal pay, and the organisation of men and women in the Trade Union movement. There must be no sex party. The Labour Party is the woman's party."

As this is a definite statement of policy, may we ask the signatories how they make this agree with the present state of affairs?

All over the country women have been thrown out of work as the result of the action of various Trade Unions.

Has the Labour Party made any protest to the Unions?

Women knew they must come off shell and fuse work, and they were prepared gladly to give way to soldier and sailor returning from the war; but after making full allowance for unemployment from these causes, there remained thousands of women who should have remained in the various works. For these women there is nothing but starvation as out-of-work, or semi-starvation in badly paid occupations.

Will the Labour Party explain their manifesto in face of the action of the various Trade Unions? What have they done for the women?

At the beginning of February do they still make the claim to be the "Women's Party," as at the end of November?

The thousands of capable women now besieging the doors of the Employment Exchanges are interested in their reply.

IS A SEX WAR POSSIBLE?

WOMEN'S FUTURE IN INDUSTRY.

The possibility of a sex war is one of the sinister prospects of the near future.

Round the unemployed women—Viscountess Rhondda, reputed to be the keenest woman of business in the country, puts their number at 1,500,000—a battle royal is now raging.

Since the armistice, when it became apparent that the women workers employed on shell and fuse work would be discharged, and that women dilutees in the factories would have to give place to men, new women's organisations, whose avowed policy is to safeguard the interests of women in industry, have sprung into existence.

The most important of these is Lady Rhondda's newly inaugurated Women's Industrial League, which has offices in Central-buildings, Westminster, and organisers at work all over the country. Lady Rhondda's campaign is viewed with suspicion and mistrust by the women Labour leaders, who consider that the new movement is calculated to stir up strife between men and women workers.

Miss Amy Lillingston, one of the officials of the Women's Industrial League, in a letter to the "Daily Express," states that all over the country women have been thrown out of work owing to the action of various trade unions, and asks what the Labour Party has done to protest against this action on the part of the unions.

UNEMPLOYMENT.

"It is not true that the unions are responsible for women's unemployment," said Dr. Marion Phillips, D.Sc. (Econ.), chief woman officer of the Labour Party, to a representative of the "Daily Express" yesterday. "The Labour Party has always recognised that the women would be in a most difficult position when demobilisation came.

"Before the Women's Industrial League was born or even thought of, the Labour Party urged the Government to make arrangements for women's work when war work ended. The Labour Party urged that the national factories should be retained and turned to peace-time industry.

"No trade union has caused the unemployment of women. The simple truth is that the substitutes are the first to go, and that the dilutee woman labour is the first to be dispensed with, as we always knew it would be.

"The trade unions themselves are greatly handicapped by the Government delay in carrying out the pledges they gave for the reinstatement of trade union rules. Until the unions can see how the Government propose to fulfil their pledges it is impossible for them to reconsider the position for the future with reference to women in industry."

Dr. Phillips takes the view that preference will be given in the old industries to the man worker, whether a returned soldier or not, and that the hope for the woman worker lies in her own special trades and in new industries. The agitation conducted by Lady Rhondda's league is, she says, calculated to lead to feelings of bitterness and sex strife between men and women workers.

National News
23. 2. 19

ARMY OF WORKLESS WOMEN.

Thrown Out at the Behest of Trade Unions.

DANGER TO MORALITY.

THE NATIONAL NEWS is informed that thousands of women who have been employed in engineering works have had to be turned out before men were available to take their places. At Messrs. Vickers' huge Barrow factories, for instance, between 6,000 and 7,000 women have gone, and at another works only 200 out of 4,000 are left.

The blame is laid by the Women's Industrial League on the shoulders of the trade unions, who are said to have demanded the removal of the women, although the employers in numerous cases were willing to retain them.

Many of the workers affected, said an official of the League to our representative, "have people dependent upon them. Perhaps their husbands have been killed or seriously wounded in the war, and they have had to work to keep the home going. It is a serious matter, both from a moral and financial point of view, suddenly to deprive them of their income.

"They don't want to fill places that should be occupied by returned soldiers and sailors, but after making allowance for these there are thousands of women who could have remained in the works. There are industries in which they have as much right as the men. Take aeroplane construction, for instance, which did not exist before the war. There are many others for which women are peculiarly fitted, and we say they should not be turned out by the trade unions, especially when it means leaving the works idle.

"No, I do not believe the fairy stories about injuring their health. Of course, labour of a heavy nature must not be undertaken, but I have seen lots of cases in which the regular hours and adequate pay obtained in the factories have turned pale anæmic women into bright, healthy examples of womanhood, with consequent gain to the nation.

"Go into domestic service and the laundries? I am afraid they will do no such thing. They want better conditions than employment of that kind usually offers, and apart from that the public loses sight of the fact that there are now large numbers of women who must have sufficient money not only to maintain themselves, but a family. That is a legacy of the war with which we have to reckon."

Daily Telegraph
2. 4. '19

FAMINE-THREATENED EUROPE.

Impressed with the sombre reports of famine or threatened famine received from so many and wide spread districts in Europe, a distinguished number of men and women has presented a memorial to the Government, urging them without delay, and as a matter of immediate necessity, to raise the blockade so as to admit a greater freedom in the import of food supplies. It is pointed out that there is no time to waste, as there is a possibility of a catastrophe of unexampled horror and magnitude. Included among the signatories representative of art, literature, the universities, and labour are:

The Marquis of Crewe, Earl Beauchamp, Earl Russell, Earl Loreburn, the Countess of Warwick, Lord Weardale, Lord Parmoor, Lord Buckmaster, Lady Courtney of Penwith, Lord Henry Cavendish Bentinck, Lady Henry Somerset, Mr. William Archer, Mrs. Creighton, Mr. A. G. Gardiner, Mr. Maurice Hewlett, Mr. Jerome K. Jerome, Sir J. D. McClure (chairman-elect, Congregational Union), Sir Arthur Quiller-Couch, Miss A. Maude Royden, Mr. G. Bernard Shaw, Miss E. Picton Turbervill, Mr. H. G. Wells, the Bishops of Winchester, Bristol, Exeter, Hereford, Oxford, Peterborough, Southwark, Lichfield, Lincoln, Chelmsford, Guildford, and Kensington, the Rev. William Temple, Dr. W. Scott-Lidgett, Mr. F. B. Meyer, Mr. J. R. Clynes, Mr. Will Crooks, Mr. Arthur Henderson, Miss Mary Macarthur, Dr. Marion Phillips, Mr. Robert Smillie, Mr. Philip Snowden, and Mr. Sidney Webb.

SEX WAR MENACE.

What The Women's Demand For Equal Pay May Mean.

NEED FOR PROMPT ACTION.

The Days Of Sweated Labour Must Never Return.

By Miss KEY JONES, Organising Secretary of the Women's Industrial League.

WITH the closing down of munition works and other factories created during the war, a new industrial problem has arisen. Thousands of women are now on the labour market, with little or no immediate prospect of employment, although their need is urgent.

Many of those women who in pre-war days had no real need to work have now a very real need. Some have lost by death the men to whom they looked as wage-earners. and others are now the sole support of disabled husbands, broken in the war.

The Need Of Work.

The Women's Industrial League has been formed to champion the cause of these women. The prime object of the League is to open the road for women in industry. We recognise fully the claims of certain skilled men and of the demobilised soldier and sailor as coming first in every case; but we do demand that there shall be no obstacle placed in the way of women who wish to help in the world's work.

We claim equal pay for equal output. We want better conditions for women and shorter and more reasonable hours, and we feel very strongly that women should have equal training facilities in both schools and colleges. Also we demand that women shall be represented on all official committees and public bodies, and we are anxious to see women organised in the unions of their specific trades. Broadly speaking, we are out for bigger issues for women.

Call For Fair Play.

Many thousands of women are now industrially demobilised, and it is an important duty of the League to watch the development of the women's unemployment question, and we are out to see that they are properly and fairly dealt with.

We consider that women should be utilised in the labour world, and should be welcomed, but apart from that, on the women's question, we claim on an equality the right to work. Before the war there were thousands of women working under dreadfully sweated conditions, for low wages, and long hours in circumstances that could only lead to serious deterioration of health. 'Most certainly we don't want to see that again, but we *shall* if women overcrowd those industries again.

THE NEW OUTLOOK FOR LABOUR.

Pacific Effect of the Conferences.

By Our Labour Correspondent.

A new stage in the Labour situation is reached with the decision of the miners to participate in the inquiry of the statutory Commission, and with the appointment of a joint committee by the national conference on Thursday to consider and report upon the general problems of industry.

The crisis which menaced the future of the country has been deferred for a brief space, and although it would be foolish to assume that the danger has passed, there is hope that the investigation of the Coal Commission, directed by so able and experienced a chairman as Mr. Justice Sankey, will point the way to an accommodation. Even if only a temporary settlement is secured it will be of inestimable value.

Miss Bondfield.

The next few months will be very critical for British industry, which is at present suffering from inertia and stagnation resulting from transition conditions and general uncertainty. An industrial upheaval of any magnitude during this period would have a deadly effect on all reorganisation efforts.

A TIME LIMIT.

The time available for the first and vitally important task of the Coal Commission, that of reporting on hours and wages, is strictly limited to three weeks. The general industrial committee is not so pressed for time, because its chief mission is to suggest how future demands from other workers than those organised in the Triple Alliance may be met well in advance, so that the difficulties which result from a policy of drift may be avoided.

The free and candid interchange of views between such widely representative employers and workers' officials may not prevent sporadic strikes in miscellaneous trades, but if general lines of policy can be worked out on the questions of hours, wages, unemployment, and joint council organisation, a big advance will be made in the direction of limiting industrial strife.

Miss Tynan.

The employers, at any rate, will have a golden opportunity of confirming Sir Allan Smith's declaration on Thursday to the effect that they are willing to go much farther than the workers think. It must not be imagined, however, that settled industrial peace is to be achieved merely by proposals for dividing profits between capital and labour. The conditions and possibilities of expansion of production vary so widely in different industries that a policy of this kind, unless it be modified by consideration of the interests of consumers as a whole, would merely create a crop of new inequalities, and give rise to new causes of unrest and discontent.

THE TRIPLE ALLIANCE.

Satisfaction at the turn of events in the coal crisis must not be allowed to obscure the dangers which still attend the negotiations of the railwaymen and transport workers, although it is difficult to believe that if the recommendations of the Coal Commission satisfy the miners a reasonable settlement of the claims of the other bodies in the Triple Alliance will be unattainable. The railwaymen's representatives meet the Railway Executive again on Thursday, and the Transport Workers' Federation demands on behalf of dock and riverside workers are to be further considered on Tuesday.

The strike of shipwrights, boilermakers, and blacksmiths on Tyneside and other North-East Coast centres has definitely collapsed after a costly and futile effort to force the hands of the employers on the 47-hour issue. Resumption of work, which is to take place on Monday, will open the way for renewed negotiations between the employers and the union officials representing these workers. Apart from its failure as a strike, the stoppage has brought about strained relations between these three unions and the other unions in the Engineering and Shipbuilding Federation, and unless a reconciliation can be secured future movements of these large bodies of workers must be weakened. Meetings of engineering workers in various centres recently have revealed widespread dissatisfaction with the 47-hour settlement, and at the National Conference on Thursday Mr. Brownlie, the chairman of the A.S.E., intimated that a movement in the near future for a still shorter working week was inevitable.

OWNERS AND NATIONALISATION.

Colliery owners have made no secret during the past week of their opposition to nationalisation of the mines, and this should be kept in mind in view of the emphatic declaration of the Triple Alliance executives that the workers they represent "stand unalterably" for "State ownership of mines, railways, and means of inland and coastal transport." The issue is now being definitely joined, and the Swansea Chamber of Commerce yesterday protested strongly against nationalisation, and decided to join hands with the Scottish Coal Exporters' Association, which has similarly protested.

The Ministry of Labour states that in the list of members of the industrial joint committee appointed on Thursday the name of Mr Benjamin Talbot should have been given instead of that of Sir Robert Hadfield as the representative of the iron and steel trades.

Women workers' interests on this committee will be closely watched, although they have only two representatives—Miss Margaret Bondfield and Miss Anne H. Tynan. Miss Bondfield's strenuous activities in the organisation of women and girl workers are well known, and during the war, in association with Miss Mary Macarthur and others, she laboured indefatigable to raise the standard of wages and improve the conditions of the munition workers. W. M.

In order to secure a more effective administration of the work in Ireland of the Ministry of Labour its organisation is being extended into an Irish Department.

ATTITUDE OF THE GIRLS.

"I have tried for weeks and weeks," said one lady who runs an undertaker's business, and has been kept particularly busy lately, "and have found it impossible to get a girl to look after the shop. The work is quite easy, and requires no experience, and is well paid for at £1, but I simply can't get the place filled. 'We do better as we are,' the girls say scornfully when offered the post."

The same story was told me by the proprietor of a large hotel.

"Girls say quite openly that they are satisfied with 25s a week and that they don't intend to worry about work until the thirteen weeks are up."

The attitude of the girls, however, was vigorously defended by a very intelligent shell girl with whom I had an animated discussion.

"What right have they to cast any blame on us, I'd like to know?" she exclaimed, thrusting her hands deep into her capacious pockets and looking me straight in the face. "Haven't the Government, that I heard at the General Election cracked up to the sky, decided on this payment? Isn't it the scheme devised by our Heaven-sent political leaders, and can you blame the girls if they take the money?

"We aren't all philanthropists, you know," she added, smiling grimly; "we have to look after number one in this world. And what, after all, is 25s per week?—it's only worth 12s 6d of pre-war money, and no self-respecting girl could live on it. Most of us have been slaving hard for the last three years, and surely if we want a little relaxation now no one will blame us.

"Remember, I'm not excusing the work-shy girl, but I don't think she's so common as some people say. As for reducing the benefit, we know why employers want that course taken. They've been paying starvation wages for long enough, and this is going to find them out.

"Thank God! I say," she exclaimed dramatically, "that some girls are refusing to take jobs at less than 30s a week—it's little enough. When we look round and see the money spent on society weddings, and fox-hunting, and —"

"Fur coats," I said smiling.

She took the jest in good part. "Oh, there were never very many fur coats bought by munition girls, nor pianos either. And, by the way," she said, giving a shrewd dialectical dig, "I think I remember Mr. Lloyd George saying in one of his speeches that the girl munition workers had helped to win the war, and surely a grateful country isn't going to grudge 25s per week."

In further conversation she made the rather good point that as the Employment Exchanges could check a girl's honesty in looking for work by means of her card, the employers were really largely to blame for not using the Exchanges more freely, and thus enabling the officials to weed out the "work-shy."

The existing scheme for out-of-work donation provides, I may point out, a maximum of 13 weeks' donation.

It has been decided that, subject to the fulfilment of certain special conditions, applicants who have drawn the full 13 weeks may be granted a further policy entitling them to draw an additional amount of donation (not exceeding 13 weeks), on a revised scale, provided that they can satisfy the usual conditions for the receipt of donation, such as proof of unemployment and inability to obtain suitable employment.

The additional policy may, in certain cases, be granted provisionally for a shorter period than 13 weeks.

An additional policy will only be issued upon the recommendation of the Local Advisory Committee—in the case of persons under 18 the Juvenile Employment Committee—who will require to be satisfied that the applicant is genuinely seeking work and unable to find it.

In cases where an additional out-of-work donation policy is granted the rates of donation are as follows:—

Men	20/-	Boys, 15-18...	10/-
Women	15/-	Girls, 15-18...	7/6

There will be no change in the rates of supplementary donation for dependent children under 15 years of age, which will remain at 6s a week for the first child, and 3s a week for each additional child.

Manchester Guardian 22.3.19

EMPLOYMENT OF WOMEN.

REQUEST FOR COMMISSION OF INQUIRY.

(From a Woman Correspondent.)

LONDON, FRIDAY.

Yesterday evening's meeting of the Women's Industrial League at the Central Hall, Westminster, was the first public meeting it has held in London, and very lively it was. Representatives from branches in Manchester, Lancaster, and many other parts of the country were present, and among prominent women in the audience were Mrs. Fawcett, Dame Katherine Furse, and Miss Lilian Barker.

Judging from the laughter that greeted the story of a Government official who when asked urgently for a six-inch gauge offered to send two three-inch ones instead, hundreds of the girls present had a knowledge of tools. It was evident that a great many of them resented bitterly the attempts to draft them into domestic service, for strong feeling was shown every time the words were mentioned.

Questions were freely asked at the close of the meeting, and a whole series of questions asked by one speaker seemed to wish to establish a connection between the Premier and the formation of the League. Lady Rhondda was even asked whether the memorial sent in her name on behalf of the League to the Prime Minister on the eve of the election, and the letter sent by him in answer next day, were not both written by the same person. Her denial was dignified and explicit. She was further asked whether the formation of such a league should not be left to people familiar with all industrial conditions instead of being undertaken by ex-Government official, to which she replied that people who were in a position to know the present conditions of industry and unemployment were fully entitled to take action to meet the problems. She made it very clear that the Women's Industrial League had no desire to work in opposition to, or to overlap the work of, trade unions; that it considered trade unions absolutely essential, but that it sought to educate public opinion, to watch women's industrial interests, and to have the backing of a great body of organised industrial women. The main thing was that the hundreds of thousands of women now or lately in industry should be organised to develop such new fields as are open to them, to open new doors, and to resist all attempts to deprive them of work for which they have proved themselves eminently fitted.

Lady Rhondda's estimate is that the number of women now out of employment—including the half-million drawing unemployment pay—is about a million and a half.

A resolution was carried calling upon the Prime Minister to redeem his pledges to the Women's Industrial League, and at once set up machinery to enable women to obtain an open field in industry by seeing that they have employment in new industries, and that the pre-war industries shall be kept open to them. A further demand was that the Government should set up a Commission of inquiry to investigate the conditions of women's employment.

Ways & Means 3.5.19

WOMEN'S EMPLOYMENT

To the Editor of WAYS AND MEANS.

SIR,—It is quite true, as Miss Mabel Willison says in your last issue, that the numbers of unemployed women are increasing, and that the failure to accord any definite recognition to the problem of their unemployment is arousing a sense of bitterness amongst women. But why should Miss Willison be so concerned to safeguard the so-called right of men trade unionists to keep women out of work which they have done with remarkable efficiency during the war? Why *must* women stand by the Government's pledge to trade unionists to establish pre-war conditions in the various trades, however damaging to women's prospects this may prove to be?

Women workers were not consulted in the bargain made between the Government and trade unionists at women's expense. And is it true that men workers will return to pre-war conditions? Have not men's wages risen enormously during the war and have they not secured for themselves better conditions and shorter hours? Are they willing to give up these gains? They must realise that women workers are out for industrial freedom. Women ask to be allowed to compete freely with men in all trades and sections of trades. They are quite willing to take the consequences of free and fair competition, but they are not any longer willing to be cooped up in "women's trades," and to have their sphere and activities defined for them by men competitors.

Women had a long struggle to secure higher education, and to become members of the medical profession—any number of people regarded this as a most "unsuitable" profession for women; their efforts to enter the legal profession have not yet proved successful. Women have had a long fight to get the principle of equal pay for equal work recognised by the National Union of Teachers and the Shop Assistants' Union. It is certainly not an established fact in either of these unions; but surely Miss Willison must recognise that the whole trend of modern life is to secure for women equal freedom of opportunity and equal awards with men throughout all branches of our national life! Are men trade unionists to be the only people to deny this freedom to women of their own class? By doing so, they condemn their own women-folk to sweated trades and sweated conditions. In that case women will not have created a sex war, but it will be there right enough.—Yours, etc.,

FLORENCE A. UNDERWOOD.

WOMEN MAY BECOME BLACKLEGS!

Need Of Training To Compete With Men In Industry.

THOUSANDS OUT OF WORK.

By Mrs. H. A. L. FISHER.

THE problem of the position of women in industry is no new one, but, like many others, has been brought into stronger perspective, has become urgently pressing for solution, under the changed conditions due to the transition from war to peace.

It is part of the whole complex question of reconstruction, and it is by no means the easiest part.

Before the war it is roughly true to say that, excluding the textile industries of Lancashire and Yorkshire, and the comparatively few well-paid positions in domestic service and the needle trades, women were excluded from the well-paid and skilled ranks of the industrial world.

MRS. H. A. L. FISHER.

They had penetrated a number of trades, it is true, but these, in most cases, were those in which the lowest rates of pay prevailed, for (as for example, in the printing trade) the skilled and well-remunerated positions were not open to women, who were confined to the lower ranks.

Lower Standards.

The reasons for this state of affairs are partly tradition, partly prejudice, partly the natural instinct of the male to preserve for himself his hard-won privileges, partly the unfortunate willingness of the average woman to accept a lower standard of comfort than that of the average man.

Partly, also, it is due to the pernicious effect of the subsidised wage-earner, the woman who is maintained in part by husband or father, and who is content to work for a sum which is a useful contribution to the family exchequer, or which provides he with comfortable pocket-money, but upon which the unfortunate other woman who maintains herself altogether is wholly unable to maintain health or efficiency.

As a result of these and other influences it is broadly true that before the war there were many women wanting work, a limited number of industries open to women, and those industries for the most part ill-paid, often heavy, monotonous and unskilled.

Wages tended to be deplorably low, and efficiency consequently low too.

When The Call Came.

Then came the war, and the consequent demand for women to replace the men called up to defend freedom and civilisation against autocracy.

Men and women alike did their best to serve their country in her time of peril. Men faced the horrors of Flanders and Gallipoli; the women undertook and successfully carried on the work which we had hitherto supposed could only be done by men.

At this moment many thousands of women are out of work

This is in part due to the present dislocation of industry, in part it is the inevitable displacement of the dilutee by the returned soldier or sailor.

Yet no thinking person can doubt that the country, cruelly impoverished as it necessarily must be by the long strain of modern warfare, with its tremendous burdens of expense, needs the labour and the brains of every willing worker.

We claim no privileged position for women, but what we do demand, not only for their own sakes but for that of the country for which they have been proud to work, is an equal opportunity of service.

No one supposes that an untrained woman is the equal of the trained man.

But what the war has proved is that, given equal training and equal opportunity, women can render full service in many an industry which has hitherto been firmly closed to them, and which in the panic of the moment may readily be closed again unless determined efforts are made to keep the doors open.

Equal Capacity.

In many ways the woman has shown a capacity equal to that of the average man.

What, then, are the remedies for the present grave state of affairs?

The first remedy is undoubtedly that of Time.

Dislocation of industry is inevitable after an upheaval of such tremendous magnitude.

We have, however, great powers of recuperation, and there is every reason to hope that with the coming of peace and the reorganisation of industry the difficulties of the transitional period will be overcome, and we shall enter upon a new and, let us hope, more satisfactory period of economic life.

But if woman-power is to be utilised to the full we must think carefully and think clearly.

Two needs stand out above all others.

Training And Pay.

The first is *equal opportunities of training*.

If women are denied this they will inevitably relapse once more into the ranks of the unskilled.

The second is an *adequate standard of remuneration*.

No woman can maintain efficiency upon a diet of tea and bread and margarine, and the girl who has realised that with proper wages she can secure adequate meals will, it is hoped, never again return to the old vicious circle of low pay, over-fatigue, imperfect nutrition, low efficiency, and—thus again—low wages.

But unless her standard of wages is such that she gets equal pay for work of equal value with that of men, she will inevitably be regarded as a blackleg, actual or potential, by the male worker, and as such will be excluded from the skilled and remunerative industries.

Liverpool Courier 31.3.'19

THE WOMEN'S INDUSTRIAL LEAGUE.

TO THE EDITOR OF THE COURIER.

SIR,—It may interest your readers to know that the activities of the Women's Industrial League, of which the Viscountess Rhondda is president, have begun in Liverpool. The work of the league is to help to secure for women—

1. Equal opportunities for employment in all occupations suitable for women.
2. Equal training and educational facilities.
3. Equal pay for equal output and good working conditions.
4. Equal representation by women on all Government committees and public bodies.

The industrial and national value of women has been fully and generously recognised during the fighting years; it remains yet to be recognised under more normal conditions. It cannot logicaly be denied that what was a national asset in war time is a national asset in times of peace, although certain selfish interests would proclaim otherwise in a short-sighted policy. The brain, the heart and the hand of women are needed to help to create a new and national life and rebuild it on sane and safe foundations. National problems cannot be solved rightly with one-half of the nation left largely unconsulted and restricted or altogether excluded from various activities. Women patriotically demand that every door now closed to them because they are women shall be opened. Their claim is an open road in every field of work suitable for women after the prior claims of discharge men and certain skilled men have been met.

Women have no desire to undercut men or provide cheap labour for employers. Recruits for sweated labour toiling under unhealthy and degrading conditions will not be drawn from women who have enjoyed the benefit of working in national factories or privately-owned establishments where a certain standard of decency and even comfort has been maintained. Enlightened employers realise that cheap labour is in the long run dear labour, and know from experience that fair dealing repays itself two-fold, with the result that business conducted on more honest lines does prosper.

The Women's Industrial League supports trade unionism and encourages women to join the existing unions of their occupations. As a non-party organisation, acting independently and nationally, and backed by strong numbers, the league provides a potent force to strengthen the position of women in every field of activity and safeguard their interests.

All women workers, industrial, commercial, professional, and all women who have the interests of women at heart, are invited to join the league in order to assist actively in removing the artificial barriers that prevent women from taking a full and free share in the production and maintenance of national wealth.

The league is run on democratic lines by representative committees. The membership fee is 1s. All inquiries should be made at the local offices, 20, North John-street, by letter or in person any afternoon between 2 30 p.m. and 6 30 p.m.—Yours, &c.,

(MISS) H. JOLLIE
(Area Organiser).

THE FUTURE OF THE WOMAN WORKER.

WHAT WILL BE HER EFFECT UPON TRADES UNIONISM?

By A SPECIAL CORRESPONDENT.

As a result of the war the question of woman's position in the labour market has assumed an entirely new aspect.

IT is impossible at the moment to estimate the effects of the war upon the position of women in industry.

At present we do not know how many of the 1,250,000 women engaged in munitions have been reabsorbed into the ordinary currents of life or are seeking work in other directions, but two things seem to be certain:—

1. That the position of women owing to the legislative and administrative changes following the war will be greatly improved as regards wages and hours of labour.

2. That since young girls of to-day will have a diminished chance of marriage it will not be long before competition for employment amongst women is severely felt, and the need for organisation into trade unions as a consequence will have to be recognised.

Wages and conditions of labour have improved for women in proportion as they have improved for men in industries affected by the war. All that is necessary is to examine the wages paid to women in munition works with the wages paid to women and girls in other industries that were open to them to see the great change that has been effected.

SURPLUS WOMEN IN INDUSTRY.

It must be admitted that the wages of a large number of women were the result not of industrial bargaining as between one organisation and another (a bargaining which takes account of the laws of supply and demand), but were artificially fixed by statute or statutory laws.

All the women, for example, engaged in munition work were protected so far as wages and hours were concerned by the Munitions Acts, just as women engaged in certain sweated trades are protected by the Trade Board Acts.

During the war the rates of wages for women munition workers have gone up from 2½d. or 3d. an hour to 5½d. or 6d. an hour, with the addition of bonus money of 6s. a week.

In shell making, which was rather an exceptional trade, they advanced from 12s. or 15s. a week in 1915 to a minimum of 30s. a week, and, in the case of piece work, the wage earned was as much as £2 10s. or £3 a week.

As to the second point, with regard to the surplus of women in industry, it is estimated that the numbers of women engaged in industrial and commercial occupations have been increased by some 40 per cent. since the outbreak of the war, and since a very large number of young men have lost their lives in the war many of these women must continue in industry and become independent workers.

A BRIGHTER FUTURE.

The future, however, for them is lightened by the change that has come over man's conception of women, and specially of the women workers. The rights of citizenship have been conceded to millions of women, and the standard of women's remuneration is therefore much higher than it ever has been.

Some of the occupations in which women have been engaged have proved to be unsuitable. They were rendered necessary by war conditions, but they involve too great a strain by reason of the long hours and the high pressure of work.

There were plenty of illustrations in munition works during the first years of the war in which girls were working for seven days a week and only one Sunday off a month, and there were many other illustrations of labour shifts lasting sixteen hours or night work of twelve hours.

Mr. Lloyd George's promise to the industrial conference on a minimum wage and a forty-eight-hour day includes women, and trade unionism will almost certainly make great strides amongst them, as it has during the last few years. At the present moment considerably over 800,000 women are organised.

A question which is likely to play an important part in the future of the trade union movement is how far women who are employed in the same trades as the men should belong to the same trade union.

In the textile trade this action is universal, and in other trades it has become general, although the Amalgamated Society of Engineers has up to the present refused to admit women to membership.

Daily Chronicle
Jan 16. 1919.

INTERNATIONAL LABOUR BUREAU.

DEMAND FOR WOMEN DELEGATES.

The Women's Industrial League is appealing to all women to support the claim for the more adequate representation of women by women at the International Labour Bureau Conference.

It is reported, the League states, that the first conference will take place at Washington in October of this year. This machinery will deal with international legislation vitally affecting women workers, yet it is proposed that only one delegate representing workpeople should be sent from each State in the League of Nations. This delegate, who is certain to be a man, is allowed two advisers, one of whom, Sir Robert Horne has stated, shall be a woman when questions concerning women's interests arise. But this concession is far from meeting the claim for representation.

Already, the League states, seven gentlemen representing Great Britain, France, United States, Italy, Japan, Belgium, and Switzerland, with a secretary drawn from the Ministry of Labour in London, are considering and tabulating matter relating to questions regarding women's employment before and after childbirth, women's employment during the night, and women's employment in unhealthy processes.

The Times. 24.5.19

LEAGUE OF WOMEN.

DEMAND FOR EQUAL PAY FOR EQUAL WORK.

Equal opportunities for employment in all occupations suitable for women.
Equal training and educational facilities.
Equal treatment in respect to pay and working conditions.
Adequate representation by women on all official committees and public bodies.

These are the objects of a new organisation of women workers, to be known as the Women's Industrial League, of which Lady Rhondda is president.

It will be remembered that Lady Rhondda recently presented to Mr. Lloyd George a memorial on the future employment of women in industry, to which the Prime Minister replied in a favourable sense.

The new League is to be non-party, and is to work for its objects, which may be summarised as aiming at fair-play for women who wish or have to earn their own living, through a Central Council and local committees.

Women who have been war workers in many fields have responded in great numbers to the invitation to become members. The membership fee is only one shilling. The offices of the League, in Westminster, are in working order, and the clerical and organising staffs installed.

702

702/12

"Self-Determination" in Industry.

It is usually unfortunate when industrial reformers borrow the language of political slang. Industry, engineering in particular, is a more exact business than politics, and gains nothing by adopting the often ambiguous catchwords that politicians affect. The demand put forward in the recent report of the Women's Employment Committee for "self-determination" in industry is a typical illustration of this disadvantage. The phrase can bear equally well two quite distinct meanings. On the one hand, a minority of works in a trade may be obliged to fall into line with a majority in adopting measures for the benefit of its workers. Subject, perhaps, to the reservation that such coercive measures should be taken only on a majority of defined and sufficient preponderance and not on a bare majority, "self-determination" in this sense may have much to commend it. The disposition of enlightened employers, as the Women's Employment Committee recognizes, has long been to outrun statutory requirements for the well-being of employees; and in this, as well as other measures for the benefit of their industry, employers who wish for improvement would be greatly assisted by an assurance that the rest of the trade would fall in line. This assurance they could get by "self-determination" in the sense given above. But the phrase can also mean, and is likely to be often so interpreted, that an individual works cannot concert with its employees measures for mutual advantage unless such measures are approved by the entire industry. No impediment more crippling to progress than "self-determination" interpreted in this sense can be conceived. In any natural evolution the method of advance is that the pioneer steps are made not by an entire class but by individuals, who are followed by others as success becomes apparent. Individual works through a happy combination of circumstances may be able, to the benefit of all concerned within the works, to make arrangements that would not be acceptable to the rest of the trade; and to prevent them from doing so merely because other works were not situated so fortunately would be to deprive industry of its most hopeful method of advance, and to compel those engaged in the individual works to sacrifice their own prosperity without benefiting their industry.

PRE-WAR PRACTICES BILL.

CLAIMS OF WOMEN WORKERS.

An amendment to the Restoration of Pre-War Practices (No. 3) Bill is to be moved in the House of Commons, on the suggestion of the London Society for Women's Service, of 58, Victoria-street. It will be to the effect that, whatever may be the regulations for the employment of workers in the trades affected, women who are qualified for the work shall not be debarred; and also that trades and processes which are in themselves new, or are new to this country since the beginning of the war, shall not be included in the scope of the Bill.

Mrs. Oliver Strachey, hon. Parliamentary secretary to the London Society, said yesterday:—"We support the principle of the Bill. We believe that all the promises made to the men should be kept and the men taken back, but in the trades which have grown up since the war and are not technically new, and the trades which, like the optical, are competing with Germany, and in which there are comparatively few skilled men, women should not be forbidden to work. If the Bill becomes law without amendment it will be illegal to employ women upon any form of work in any of the engineering and allied trades, whether it be filing, drilling, slotting, turning, welding, crane driving, gear cutting, assembling, or any other of the processes for which they have displayed such marked aptitude. They will be turned out wholesale from glass work, light chemical work, and aircraft work, in which they have been one of the chief factors in the building up of the industry in this country.

"The Bill will prevent the nation from making use of the skill and ability of thousands of the girls who came forward to work for their country, and this at the very time when production is most necessary."

Croydon Times

4/6/19

WOMEN IN INDUSTRY.

The continuance of women in industry is one of the principal problems of industrial reconstruction, and the Women's Industrial League should be an important factor in its satisfactory solution. Its objects, briefly, are (1) equal opportunities for employment; (2) equal training and educational facilities; (3) equal treatment in regard to pay and working conditions and (4) adequate representation on all official committees and public bodies. The attention of all interested in the welfare of women in particular as well as of the community in general is called to a meeting which the League has arranged at the Public Hall on Tuesday, June 16th, to commence at 8 p.m. The President of the League is Viscountess Rhondda.

Evening News

AN APPEAL TO TRADE UNIONISTS

By I. B. O'MALLEY.

We print this article in accordance with our regular policy of giving critics of our views an open platform.

The Restoration of Pre-war Practices Bill is said to be an agreed measure arrived at between Trade Unionists and employers. It is the fulfilment of a pledge given by the Government to the Engineering Trade Unions in the Spring of 1915. In this agreement the women workers did not take part, and as they are mostly under thirty, they can hardly be said to be represented in the Parliament that is now discussing the measure. Yet they are most vitally concerned in what is now happening. If the Bill goes through unamended, it will result in the exclusion of women by law from all forms of engineering work wherever this is demanded by the local men workers. This will happen not only in the case of older branches of the industry (from which they were formerly excluded by custom, not by law), but in new branches, or branches new to this country which have been built up by their labours. A legal sex barrier will be set up which has never existed before; the Trade Unionists will be receiving a little more than the strict letter to their pledge!

The women workers, on the other hand, will be receiving a little less than justice. Many of them are widows of soldiers, many of them have children to support, many of them have had their homes wrecked by the tragic events of the last five years; most of them have their livelihood to earn, and are now faced with the ghastly alternative of starving on the unemployment donation of 15s. a week, or going back at once to special "women's work"—otherwise to the sweated trades.

The Doors of Opportunity.

They would, we believe, face the present with courage if they were given hope for the future. They do not ask for preferential treatment. They have already been turned out of their work, and they recognise that they must wait until trade revives and employment is again plentiful, and the returned soldiers have been resettled in industry; but they do feel that when this has been done they should be allowed fair and free competition. If now, while they are unemployed, the doors of opportunity are shut in their faces, who can say that they will be receiving full justice, or, rather, who can deny that they will be suffering bitter injustice?

To whom then shall they appeal? Till a few days ago the answer seemed clear. The women workers kept quiet and made no agitation, because they believed that their cause was safe in the hands of their fellow-workers and in those of the workers' party in Parliament. They have clung to this faith all along, even when beset with temptations to doubt. It was strengthened by the introduction of the Women's Emancipation Bill, for who could believe that the Labour Party had two voices, and that, while pressing for the equality of women in the professions and in politics, it would itself erect a sex barrier in industry, and impose one of those limitations on human freedom which it exists to destroy?

Disillusioned.

It took the debate on the Second Reading of the Pre-War Practices Bill to disillusion some of us. We believed that recognition, that the exclusion of women was a pre-war practice of a different character from the others in question would come from the Labour benches; we believed that the Trade Union leaders would show that they cared more for justice than for the letter of their pledge. As it was, Mr. Clynes spoke for us, but he was the only one. Some of us thought that if Mr. J. H. Thomas had been there Mr. Clynes would not have spoken alone.

And what is to happen now? We are told that we need feel no anxiety, because the exclusion of women is not really intended, and because, if the Bill goes through, matters will really be settled not by law, but by negotiations between employers and employed. But if the Trade Union leaders do not wish for the exclusion of women why do they not say so in Parliament and in the Labour Press? Why should we be asked to be content with secret diplomacy in the industrial world? We have had enough of it, surely, in politics? We do not want it introduced into the Labour Party itself. We are not content to trust to it.

And if we are told (as I have been told) that we are not to trust to things being all right, but to stand aside content that they should be all wrong, because Labour is engaged in a war to the death against Capital, and must not be hindered by the women workers, or by any consideration of justice; then we say that that was the justification used by the German Imperial Government for its attack on Belgium, and that it did not lead to success. But such an argument sounds strange from the mouths of Labour men, and I cannot believe that many of them will use it. I rather believe that when women workers appeal to Trade Unionists by the memory of wrongs which the Labour movement has suffered, and by the hope of justice for which it stands, they will not appeal in vain. Among readers of the DAILY HERALD at least, we know that this plea will be heard.

Evening News

One large firm employing thousands of women reported that the cost of them represented a standing weekly additional charge of 30 per cent. Men are said to be the best timekeepers, then boys, and women last. Among 18,000 workers men lost 3.4 per cent. time against 7.1 per cent. by women, who, it was also asserted, were constantly changing their place of employment. In one large firm only 40 per cent. of the women were considered permanent employees. Aptitude for training is an important consideration. Women, it is allowed, were quick to learn repetition work; but, if it was of a jobbing nature and requiring special training, they were not found equal to the work. Fair-play compels the admission that it has always taken four years to train a mechanic. As for strength, three women equalled two men on transport or labouring work, and they were the first to tire on long shifts. In short, there is nothing very startling in these carefully-weighed statements. They are generally what people would have expected as the result of severe tests. Otherwise, the record o women varied; but all over it was remark able. Their loyalty and industry at th crisis saved the nation.

Women's Work and Wages.

A pathetic struggle is being made by employed women to maintain their standard of life. When everything is said in the way of criticism of the "doles," it can at least be contended that the Labour Ministry attempted to maintain the standard of life, and to prevent a terrible post-Armistice scramble for what might have been starvation wages. There were approximately 1,000,000 women employed on munition work, and their minimum rate of remuneration worked out at about 33s a week. How does this contrast with pre-war conditions? The War Cabinet Committee on Women in Industry consider that the pre-war average of women's wages was estimated on a liberal basis at 3d per hour, or 13s 6d a week. It is probable that the average of women's earnings over the whole field of industry proper was towards the end of the war nearer 35s than 30s weekly. No one dare say that the money paid was too much. If in a prolonged period of strain, often tiring and monotonous beyond the endurance of the ordinary man, this money was bestowed on the physical welfare of the women, it was, indeed, well spent. The report, however, does not indicate that women always gave themselves the first consideration. Industry to many of them is, and will remain, a transitional period between girlhood and married life, and the fact that she is not in work to stay tends to make the worker somewhat indifferent and the employer less scrupulous than he might be. Let us hope that women will not go back to pre-war conditions. Their political power, if intelligently and independently used, should ensure a better outlook once the world returns to normal, as it must sooner or later.

The most instructive Report of the War Cabinet Committee on Women in Industry has during the past few weeks been studied by thoughtful people all over the country. The Government have been much criticised. But this at least is to the credit of the Administration—they have turned out more in the way of interesting social documents than any other Government. It is possible to prove almost any theory from a Report of this kind, but a thorough test is not difficult to make. Take the comparison between men and women in the munition metal trades, where the women were numbered in hundreds of thousands. In the matter of quality in sheet metal works women's work was reckoned by employers to be better than men's. In engineering the women's skill was fair or equal to boys'; the men were far superior. In repetition light work women and girls were equal to men and boys; and equal again in aircraft woodwork and cartridges. In aircraft woodwork women's output was equal to that of men, and on cartridges in some cases they excelled the males by 20 per cent. In war time cost in munition works was almost as dust in the national balance; but it is vital in private employment in a normal period. It is considered by metal trades employers that women were considerably more costly than men by reason of the cost of tuition, setting up, &c., and the larger percentage of scrap.

MR. LLOYD GEORGE'S PLEDGE.

(FROM A WOMAN CORRESPONDENT.)

It is understood that the Restoration of Pre-War Practices Bill will be taken shortly after the Whitsuntide Recess. It is said to be an agreed measure arrived at between trade unionists. While there is proof of the sincerity of many men in their support of women's interests, as indeed was proved in the debate on the Bill on June 2, it would be interesting to know to what extent women were represented by women on the Trade Union Restoration Committee.

It is recognized that the skilled unions have a right to claim the redemption of the pledge given to them by the Government in the Treasury Agreement, and because of that pledge the Women's Industrial League does not oppose the Bill; but if the Bill goes through amended, women will not only be automatically turned out of engineering and the allied trades, which cover an enormous field, but also they will be legally excluded from those new industries and industries new to this country, even though these industries have been built up mainly by the adaptability, energy, and efficiency of the women workers.

The Prime Minister made a pledge for the Government in December, 1918, to the Women's Industrial League, who consider that pledge equally binding. In reply to a memorial from Lady Rhondda, president of the Women's Industrial League, Mr. Lloyd George said:—

"The Government has never agreed that new industries come under the Treasury Agreement. . . . To bring new industries under them (the restrictive clauses) would be to endow those classes whom such restrictions benefit with the fruits of the sacrifices of the war, a form of profiteering which nobody who claims respect and deserves responsibility would willingly touch. . . . It will be my care to see that in all these industries no discrimination shall be made against the employment of women. . . . In this way, and in those industrial occupations in which women were engaged before the war, opportunities of every sort will be open to every class of women worker."

PLEDGE CLAIMED.

The Women's Industrial League sent a telegram to the Prime Minister on the introduction of the Restoration of Pre-War Practices Bill claiming this pledge on the following lines:—

"The Women's Industrial League regard with alarm the inclusion of Clause 1, subsection 2, of the Pre-War Practices Bill, introduced yesterday, as the clause appears to be in flat contradiction of your statement that 'the Government has never agreed that new industries come under the Treasury agreement.' This clause also appears to be a grave breach of your pledge given to them that in all new industries that have arisen and will arise 'it will be your care to see that no discrimination shall be made against the employment of women.' They await with anxiety your assurance that the Government will use its power to ensure that the Bill will be so framed when it leaves the House of Commons that the employment of women in these industries will not be endangered."

The Women's Industrial League are responsible to the women who accepted this pledge to press that it shall be safeguarded in the Bill; further than this, they recognize the grave condition of women's unemployment.

A SERIOUS POSITION.

While women have generously recognized the claims of the skilled men and the discharged men from the Forces, their position is a very serious one: thousands are unemployed and in dire necessity for relief. Numbers of these women are widows with children to provide for, married women whom economic necessity drives into the labour market, women with dependants and children to support. Then the unmarried woman worker, "with only herself to keep," is equally driven to seek a sufficiency to do it on.

The uncertainty of the future of employment is an ever-present fear. Again, what is the position of the employed women in industry to-day? Crowded into a limited field—forced there by a Government Department that ought to know better—they are unable to obtain even a living wage. With money so cheap the present rate of women's wages in "women's occupations" is in many cases worse than sweated.

Training schemes with a maintenance allowance of 15s. cannot fail to be unpopular with those who have no other means of support.

WOMEN IN UNIONS.

With what sort of future are these women faced? The doors of the well-paid occupations closed, there is nothing for them but to struggle to obtain a semi-starvation wage and a drab existence. Women have been urged by the Women's Industrial League to organize with the men in their unions. During the war thousands of women, as statistics show, joined those unions which enlightened men opened to them. The Women's Industrial League feels confident that these unions will fight the battle for these women.

The question is this. Is the Bill or is it not intended to exclude women from industry? If it is not intended to exclude women then those who, as the Women's Industrial League, support the Bill as an honourable redemption of a pledge to certain skilled workers will not hesitate to support any amendment which safeguards the interests of women in new industries and industries new to this country, while in addition providing them with legal security in the better-paid occupations they held before the war.

THE RESTORATION BILL.

TO THE EDITOR OF THE TIMES.

Sir,—The Restoration of Pre-War Practices Bill is one that must be welcomed by all who love fair play, since it is the fulfilment of pledges given. It is, however, a Bill that deals with the future of a principal industry of this country, and one that decides the fate of many thousands of men and women workers, and it is therefore important to consider it carefully in the light of the pledges to see that it does not give away more than was promised.

This country must have increased production at once, if financial stability is to be maintained, and if pre-war customs hinder this we must be careful, in the interests of our very existence, to see that we do not go back farther than we are in honour bound to go.

Every one knows that it was a pre-war custom (rightly or wrongly) to limit output; every one knows, too, that the pre-war exclusion of women from engineering was a waste of natural resources, and these two practices, viewed in the light of the last four years, do not seem to have been wise ones. Since the unions insist, however, we must by law restore these two customs in all pre-war engineering trades, and no one can dispute this, disastrous as the results may be. But need we restore pre-war customs in post-war trades and tie up new industries in the fetters of old ones? It does not seem as if the pledges need bear so wide and so ruinous an interpretation, or that because women were not allowed to build ships before the war it must be illegal for them to build aeroplanes to-day.

The effect of this Bill upon the employment of women will be little short of disastrous. It is not, however, generally noticed that the effect upon the employment of ex-Service men will be almost equally unfortunate. If the Bill passes as it now stands, no ex-soldier who was not an engineer before the war may work in any of these trades, and any employer who finds work for him must pay a fine of £25 a day for so doing. Is this, too, a part of the bargain, and if so, must this also extend to new industries as well as old ones? I hope that the House of Commons will consider these difficulties, and will answer them before the Bill comes out of Committee.

Obediently yours,
MILLICENT GARRETT FAWCETT.

Rival Women's Leagues

There are opposing views among women with regard to the Restoration of Pre-War Practices Bill, which will come up for consideration when the House reassembles, and the organisations that represent industrial women workers are not united in their attitude towards the measure. As long ago as December last the Women's Industrial League, of which Lady Rhondda is the president, addressed a memorial to the Prime Minister, whose reply was hailed by that body as "constituting a new industrial charter for women." Mr Lloyd George expressed general agreement with the memorial, which affirmed the principle of equal pay for equal output; and claimed that in the last resort women were not bound, as the Government was, by the agreement made with the trade unions in 1915. Accordingly the League is keeping a watchful eye on the Restoration of Pre-War Practices Bill; and while it is not claiming that women should occupy the place in industry vacated by men who have now been demobilised from the forces, it is anxious that there should be adequate safeguards for the women in new industries started since the war, which women themselves have largely helped to create. On the other hand, the Women's Trade Union League, while putting forward the claim to be the really representative body of working women, advocates the view that the question is one of honourable interpretation of the undertaking, and the women should not fight or seek to interfere with the measure in such a way as would abrogate the spirit and intention of the agreement. With a cold charity the League criticises Lady Rhondda's organisation as a sinister body, which is inviting women to blackleg men.

INDUSTRIAL FUTURE OF WOMEN.

MRS. FAWCETT ON THE PRE-WAR TRADE PRACTICES BILL.

Mrs. Henry Fawcett, LL.D., delivered an address in connexion with the Barnett House Conferences at Oxford on Saturday afternoon at Oriel College on the subject of "Industrial Freedom of Women."

The PROVOST of ORIEL, who presided, said that in the matter of the employment of women they had maintained the reputation of the college for progress. They hoped that in October term they would have a married tutor and his wife living in rooms in college. They recognized the sphere of women's work and influence and hoped to extend it.

Mrs. FAWCETT pointed out that one of the most generally recognized changes brought about by the war had been that in the industrial status of women. It seemed to her nothing less than a revolution—a passage from serfdom to freedom. It would be the task of all fair-minded men and women to see that women did not lose the freedom they had gained.

The Government Bill for the restitution of trade union pre-war practices had passed its second reading. The exclusion of women from the skilled trades seemed to be the chief practice which it was intended to restore. In the debate on the second reading Mr. Clynes and other distinguished Labour leaders spoke strongly in defence of hundreds of thousands of men and women and of their right to use their labour freely to its best advantage. Unless some modifications of the Bill as it stood were made in Committee women would be in a worse position than before the war.

The Bill not merely restored the men the places which were temporarily occupied by women during the war—no woman complained of that—but would displace women altogether from engineering jobs in which many thousands of them were employed before the war. She hoped a very strong effort would be made in Committee to exempt from the operation of the Bill those trades and occupations which did not really exist in this country before the war.

Observer

They know that their work has been of value, they know that their skill could be developed, and yet they see themselves turned away from their means of livelihood and unable to safeguard or protect their position. Nothing seems to lie ahead of them but a return in overwhelming numbers to the pre-war sweated women's trades, and the suffering that this must cause will only be equalled by the loss of productive power to the nation itself. It is impossible to expect that women workers, if they are in effect shut out in this thoughtless way from their necessary freedom to work for their own livings, will remain contented and useful citizens. Nothing is more certain than that the jealous exclusion of women from all skilled and well-paid occupations will sow the seeds of future industrial trouble; and if we add to the bitterness of class feeling the further bitterness of sex war, we shall indeed have wasted a great opportunity.

Something must speedily be done to safeguard the position of wage-earning women of this country, and surely it is the duty of the House of Commons to examine this Bill with a view to its effect upon them, and to try once more to persuade the Trade Union movement to protect and strengthen its own weakest member. To pretend that women workers do not exist and need not be considered may be a tempting short cut, but it is based upon a fallacy.

Observer.

22/6/19

FUTURE OF WOMEN WORKERS.

EFFECTS OF THE PRE-WAR PRACTICES BILL.

(By Mrs. Oliver Strachey.)

Everyone is agreed that the solemn pledges of the Government given in March, 1915, must be redeemed, and everyone must rejoice that an agreement between the unions and the employers concerned should at last have been reached in the Restoration of Pre-War Practices Bill. Unless the unions are satisfied of the good faith of the Government, Whitley Councils, Courts of Arbitration, and all the hope of a gradual and peaceful adjustment will be jeopardised, and the concurrence of the Trade Union movement in the settlement of this question is therefore of primary importance.

The Bill as it stands, however, presents many extraordinary features. On the face of it, and if it were to be literally applied, it would mean the ruin of the engineering and shipbuilding industries of this country. It would mean the limitation of output, the destruction of machinery, the extermination of the semi-skilled men and the women workers and the refusal to absorb discharged soldiers into the main industries of the country: it would mean that the lessons of the war would be unlearnt and the hands of the clock set back, and that our foreign competitors would be allowed at least a year's start in the struggle for the markets of the world. But the Bill is not to be literally applied. On all hands it is admitted that it is merely a basis for further negotiations and a guarantee in the hands of the skilled men that their opinions as to the future of their industry shall be predominant. Again and again in the second reading debate on the Bill Labour men no less than representatives of the Government asserted that the Bill would be a dead letter as soon as passed, and the hope of the industry, therefore, lies in the kind of agreement and negotiations that are made subsequent to the passing of the Bill. A procedure like this, which is altogether new in history of our Parliamentary law, needs careful consideration in the interests of the whole community.

THE FIVE CLASSES.

There are five classes of persons directly interested in the settlement of these questions: the skilled men whose practices are under consideration, the employers who lose or gain according as their industry is ill or well administered, the discharged soldiers whose entry into this field of labour is so urgently necessary, the semi-skilled men whose exclusion is one of the chief matters of dispute, and the women whose mechanical abilities have been one of the great discoveries of the war. How will these classes stand when the negotiations begin? Obviously the interests of the skilled men in these future bargainings will be safe; obviously also the employers with their resources of capital and organisation can be trusted to look after their own concerns; the discharged soldiers, with the whole weight of public opinion behind them and with the gratitude that skilled and semi-skilled men, employers, and women alike feel for their services, cannot by any possibility be neglected; the semi-skilled men with their powerful organisations and their immense numbers can also do something to protect their own interests.

POSITION OF WOMEN.

But the weak, disorganised, and helpless factor in the situation is the women workers. Who, in these future bargainings, is to protect them, and what hope can they have that their interests will be so much as considered? They are not admitted to the skilled unions. In the semi-skilled unions, though admitted, they are not articulate, and the great bulk of them are at present unemployed and despairing.

Westminster Gazette.

702/124

WOMEN'S EMPLOYMENT.

EFFECT OF TRADE UNION RESTRICTIONS FEARED.

(Special to the "Westminster Gazette.")

The organisers of women's work in the past are very much afraid that the passing of the Bill restoring pre-war trade union conditions may cut the ground beneath the feet of the women who came into industry during the war. Miss Helen Ward, of the London Society for Women's Service, made the following statement to a representative of the "Westminster Gazette."

Returning Soldiers.

"We have no desire to do anything to hinder the restoration of demobilised soldiers to the employment they relinquished on joining the Army. But we feel that the nation ought not to be blinded by a temporary phase of unemployment. There is need for increased production which will in the long run absorb all this fluid labour, and the present unemployment is not due to women having taken soldiers' jobs. Enormous numbers of them have in fact been turned out.

Labour Party and Women's Work.

"The Labour Party has introduced the Women's Emancipation Bill, and it is therefore illogical to oppose the entry of women into any industry where she can hold her own. We have no wish to see women's labour used to bring down wages, but quite agree that it should be paid for on the same scale as that of men. The women are many of them the wives and daughters of soldiers who have been killed or disabled, and in any case it is the policy of the Labour Party to eliminate the leisured class. In future most women will have to and all ought to work. We feel, therefore, that it is artificial and reactionary to close the door upon women's entry to industry by legislative action.

The Pledges.

"We admit, of course, that the Government must fulfil its pledges to the trade unions, and we welcome the principle of the Bill: but we do regret that the Labour Party itself should exact the return of this particular pre-war custom, and we feel no confidence in the vague hope of subsequent conferences and compromises. No doubt they will take place and the Bill will not be literally carried out: but the part of it that affects women looks likely to stand unaltered for the reason that women are not well organised industrially. We greatly fear that their interests are not safe in the hands of their trade competitors, and so, though we admit that soldiers and sailors come first, we want Parliament to insist on the open door. Especially do we feel this in regard to new trades. After all, the pre-war practices could only have reference to pre-war trades, and the fact that the Labour Party so strenuously resists an amendment to the effect that industries which have grown up in his country during the war shall be excluded from the scope of the Bill seems to us to be extraordinary and ominous."

Aberdeen Journal

27/6/19

WOMEN WORKEI

COMMITTEE'S IMPORTANT SUGGESTIONS

The report of the Women's Employment Committee, under the chairmanship of Major Hills, M.P., makes recommendations that homework should not be encouraged in any trade. The general scheme of supervision by the local health authority should be retained, but the powers require strengthening in the direction of prohibiting homework under conditions harmful to the consumer as well as to the worker. It is desirable that Trade Board officers should have legal right of access to the lists of out-workers kept by local authorities.

Free entrance to the clerical posts in local government service should be accorded to women. All clerical posts open to men should be open to women, with a view to securing a proper standard of education. It should be required that no woman be appointed who had not passed such school examination as might be prescribed.

The relaxation of the Factory Acts allowed during war should cease at its termination, and excessive overtime, long spells of night work, and Sunday work should be forbidden. We recommend the possibility of a 44-hours working week and an annual fortnight's holiday on full pay for the consideration of the Government.

Welfare work must continue after the war, when there should be a single Government authority. The Industrial Fatigue Research Board will take the place of the Health of Munitions Workers' Committee for conducting research and investigation.

Trade unions should play an important part in preventing unemployment. Unions comprising both men and women are stronger for bargaining purposes than those consisting of women only, but there is work for both classes of unions to do.

The employment of married women outside their homes is not to be encouraged.

We recommend that some system of mothers' pensions on the lines of that now successfully in operation in the United States, which would enable widows and deserted wives, including the wives of men serving long terms of imprisonment, to remain at home and care for their children, should be established.

4/7/19

WAR CABINET COMMITTEE ON WOMEN IN INDUSTRY.

Women Workers on the Railways.

We extract the following from the Report of the War Cabinet Committee on Women in Industry. The Committee, it will be remembered, was appointed in September, 1918:—

In transport (excluding municipal tramways) the proportion of females to the total number of workpeople increased from 2 per cent. in July, 1914, to 11 per cent. in July, 1918, or by 81,000, of whom about four-fifths directly replaced men. In all railways the general clerical staff increased in number from 2,431 to 25,161, the general wages staff from 9,135 to 36,984, the general workshop staff from 857 to 6,305. The following table, extracted from a Board of Trade return, compares the number of females employed in various railway occupations in July, 1914, and July, 1918:—

Occupation.	July, 1914.	July, 1918.
Booking clerks	152	3,612
Telegraph and telephone operators and other clerks	2,800	20,995
Ticket collectors	—	1,972
Carriage cleaners	214	4,603
Engine cleaners	—	3,065
Porters and checkers	3	9,980
Workshop labourers	43	2,547
Other labourers	420	580
Cooks, waitresses, and attendants	1,239	3,641
Signal and points women, gate keepers, guards and conductors	437	1,292
Munitions machinists and mechanics..	44	1,082
Painters and cleaners (including charwomen) ..	698	1,177
	12,423	65,887

One big company estimated the proportion of women goods porters at about 80 per cent. of the staff. Generally speaking, more women were employed than the number of men they replaced, and the women did the lighter parts of the work. Thus, in a mixed gang of men and women goods porters, less goods were shifted and extra work thrown on the male checker or caller-off; the work was too laborious for women, and they could only manage weights up to 3 or 4 cwt. Among carriage cleaners the staff of women was nearly three-quarters as much again as the staff of men. At small railway-stations it was necessary to employ two women porters instead of one man. Women ticket collectors did not assist with parcels, luggage, &c., and were not so expeditious in examining tickets. There were many women gate keepers, but the men were opposed to the women doing this work, or to their employment in signalling or shunting. In regard to manual work, it was generally said by the companies that the women were not equal to the men. They were not physically fitted for the heavier duties, could not cope with emergencies, and, through lack of training, could not take on work other than their own particular job. The women regarded their position as temporary, and few showed any desire for training. There was further a tendency, where both sexes were employed together, for the men's output to be reduced to the women's level.

In tramways, the number of women rose during the same period from 1,300 to nearly 22,000, in the omnibus service from 300 to 4,500. The new posts to which they were promoted included those of conductors, drivers, cleaners, armature winders, &c., in the shops; road repairers, and a few inspectors and time-keepers. At the end of 1918 the women conductors were said to be 90 per cent. of the workers. From the point of view of the companies and local authorities, the experiment was not, however, a complete success. The following objections were raised against women conductors by the Tramways and Light Railways Association, and the Municipal Tramways Association and the London General Omnibus Company expressed similar views:—

(1) Unreliability in reporting for work.

(2) Physical inability to collect fares in rush hours.

(3) Higher relative cost, owing to the larger staff required, loss of traffic, loss of fares, absence during illness, &c.

(4) Greater number of complaints from the public.

The women were slack in collecting fares, had more "shorts," were less efficient than the men in making up bills of reports, and less courteous to passengers.

Evening Express 5/7/19

Labour Charter for Women.

The report of the Women's Employment Committee, just issued, is a veritable labour charter for women. Among the recommendations are free entrance to clerical posts in Local Government service, a large extension of trade boards, a fortnight's holiday on full pay, settlement of hours by substantial majorities of those concerned, a new Shop Hours Act to limit excessive spells of work, Government experiments to see whether a shorter working day is economically possible, continuance of welfare work, and women superintendents, encouragement of trade unions comprising men and women, training at State cost, non-employment of married women outside their own homes, pensions for mothers, care that the home worker should not be deprived of work altogether, protection to shop workers as to workers in factories, and power to the factory department to deal with offences under the Truck Act in shops as in factories, supervision of local authorities as to working hours and sanitary conditions, and to bring about closer co-ordination between the local authorities and the factory department it is suggested that a grant in aid should be paid to the former upon conditions prescribed by the Government.

Westminster Gazette

10/7/19

Women and the League of Nations.

The Women's Industrial League, which organised a deputation to Mr. Barnes yesterday, is not to be confounded with the Council—an investigating body entirely—or with the other organisation over which Miss Mary MacArthur presides, the Women's Trade Union League. Each has a different mission, although the two Leagues might seem to overlap somewhat. The Industrial League, which was founded by Lady Rhondda, has a programme of a very comprehensive character, including some things that do not come quite within the scope of the Trade Union League. The deputation put before Mr. Barnes, for instance, a suggestion for the provision of a special department of the League of Nations to deal with particular social questions affecting women, such as the provision of crêches, widows' pensions, and housing. It would be primarily a women's department, controlled by a committee, with a secretary attached to the League of Nations. The idea is that this department would form a link between the problems of the women's home and those of women's labour outside the home.

The Nation

THE CHILDREN'S FAMINE IN EUROPE.

SIR,—The Government has invoked the help of the British people in relieving the distress from famine in Europe and Asia Minor. Lord Robert Cecil has expressed the hope that the relief agencies appealing to the public under the Government's offer to double all voluntary gifts (up to £200,000) raised in the United Kingdom "will receive response that will bring to some millions of children . . . a message of practical sympathy." "There is no doubt whatever," said Lord Robert in the Commons on the 21st ulto., "that in large parts of Central Europe, including some parts of Germany, the children, the babies, are actually dying from want of food and want of milk. I do not believe that can be questioned."

Other distinguished men appeal to us. Lord Curzon sends out "an urgent call to the people of the British Empire to play their part in the great task of reconciliation and mercy." General Smuts asks us all "to exert ourselves to the utmost in the great work of saving the wreckage of life and industry." Sir William Goode, British Director of Relief Missions in Paris, writes to tell us that twelve and a-half millions are being spent by our Government in Europe, and this sum will all be used up or allocated before the harvest. Still there will be urgent need, he says, for medical comforts and for supplementary food, particularly for the children.

Will you be so good as to allow us space to remind your readers that the Save the Children Fund (Hon. Sec., Mrs. Buxton, 329, High Holborn, W.C. 1) has set itself the task of carrying this message to the nation? This is a central Relief Fund to be administered through the various excellent relief agencies which are at work in different parts of the famine area. The Fund does not confine itself within the limitations of the Government grant (Germany and part of Russia are excluded from benefit), but sends help where help is most needed irrespective of nationality. Donations, however, may be earmarked for any particular country. "What you have already done," writes Mr. C. K. Butler, Head of the British Mission to Vienna, "has been and will be of incalculable benefit to the suffering."

This great work is the first life-saving scheme of international scope, and it may prove to be the greatest mission that compassionate men have ever embarked upon. It can only succeed if people of all classes, parties, and beliefs will unite and ally their efforts with those of the Government.—Yours, &c.,

INTERNATIONAL LABOUR.

WOMEN'S REPRESENTATION AT WASHINGTON.

A deputation of industrial, commercial, and professional women, led by Lady Rhondda, organized by the Women's Industrial League, and representing 11 different unions and associations, waited on Mr. G. N. Barnes, at the War Cabinet office, Whitehall-gardens, yesterday, on the question of representation of women at the International Labour Conference at Washington in October.

Mr. J. R. CLYNES, M.P., in introducing the deputation, said the economic machinery of the League of Nations could not function for the ends for which it was established unless it had due regard to the child-life of the community, and to the industrial and economic position of women. He submitted that as women were being driven to be their own wage-earners and frequently to be breadwinners for others, something should be done in connexion with the machinery of the League to admit women to their proper participation.

LADY RHONDDA said it was a considered opinion that, while organized men could protect themselves, unorganized women must be protected by a paternal Government. Women's evidence was required on such points as: (1) working before and after childbirth; (2) during the night; (3) in unhealthy conditions; and (4) except within certain hours. Other speakers held that trade unionists failed to grasp the women's point of view.

Mr. BARNES said the conference was not so wide in its application as the deputation seemed to imagine. Double standards of morality, and equal rights for women and men in regard to franchise, however important, and the question of an international standard of education were, at present at all events, outside the scope of the organization, except that they were going to discuss at Washington the question of the protection of children from profit-making industry up to the age of 14 years. It was not quite so bad as that the Washington Conference was going to deny women the opportunity to sit and advise, but they had been faced with the difficulty of the demand that women should be not only advisers, but direct representatives and delegates of women. The difficulty had reference to the size of the conference and the States, and the various voluntary organizations might resent the imposition upon them of a condition to send women. Women would probably be given a position as delegates in matters of direct concern to women.

The governing body consisted of 24 persons, which was too many for an executive authority, but even on that scale it was only possible to get one representative from each of the seven countries of chief industrial importance. Great Britain only had one representative from the State, and there were only six representatives of employers and six of workmen altogether. The same difficulty applied in other matters, but women's representations had been considered.

As a result they inserted pretty well all the things that had been submitted to them by the women. The Labour Commission passed a resolution, which was in the existing document, that not only all posts of a clerical character, but any position of delegate or anything else on the governing body and as delegates and advisers to the Conference should be open to women exactly on the same terms as to men. Therefore women's exclusion from the Labour organization was due to the fact that the organization of women was a long way behind that of men. Special provision was made that women should be selected from the various countries to sit on the International Labour Office, which body would be the eyes and the ears of the whole thing.

There were two women on the Organization Committee now at work arranging for the conference at Washington on October 1. Where matters such as maternity came up sensible men would vacate their seats and give them up to women advisers. Each delegate was entitled to take two advisers on each topic down on the agenda, and the State delegation, therefore, was entitled to take two women advisers on night work, two on poisonous processes, two on maternity, and probably two on considerations affecting children.

Mr. Barnes added that he had mentioned the question of selection to Mr. Bonar Law, who was very sympathetic, and agreed with him that if they could meet the women in any way they should do so. The industrial system of our country had simply ground the women down, and he was glad to know they were now exerting themselves so that conditions would be better.

702 TH

WOMAN'S REWARD FOR WAR-WORK.

Admission To Trades Unions The Coveted Prize—A "Mean And Bigoted Bill"—Sexes Side By Side.

Pre War Practices Bill

By Miss Florence Underwood, Secretary Women's Freedom League, in an interview.

LEADING lights of the Labour party are never weary of proclaiming their firm belief that the world can only be saved by embracing the beautiful ideal of democratic rule.

To my mind there can be one, and only one, interpretation of that ideal: absolute equality as between man and man, woman and woman, and—this is the vital point—man and woman.

For a country to be truly democratic, this equality must hold good, irrespective of the class, position, or wealth of the individual.

I take it that this is also the construction that Labour party officials imagine they put upon democratic rule and institutions.

But why imagine?

Because at this very minute they are supporting what, in my opinion, is the meanest and most bigoted Bill that ever disgraced the British, or any other, Parliament.

I refer, of course, to the Bill now before the House of Commons which is destined to restore the pre-war trades union customs and privileges.

MISS FLORENCE UNDERWOOD.

This is its avowed and laudable object, laudable only so long as one does not dip below the surface, for in practice this Bill is intended to legalise the old injustices to women, under which they were debarred from competing in industry on anything like equal terms with men.

They were not allowed to become members of very many trades unions, and as non-unionist and unionist will not work side by side, they were shut out from all the more highly-paid industries.

But the war came, and the supply of male labour, owing to military calls upon it, ran short. Certain trades union rules were relaxed, the Government issued its appeal to women to fill the gaps in the labour market, and every one remembers the noble response made by the women of Britain to that appeal.

But what is to be their reward now?

Scarcely has the fighting ceased, before the Government brings in this Bill to turn women out of most of the adequately-paid trades and sections of trades in which women had obtained a footing during the war.

That, in effect, is what the Bill means, in spite of the fact that women, as such, are not mentioned.

The very people who are enthusiastically supporting this Bill are also pledged to support our cause—equal rights as between men and women. To such glaring inconsistencies, then, do politics lead men.

But this attempt to slam and bolt the door of industry against women will have little or no influence upon the political positions and aspirations of these so-called "leaders," for the majority of the women that it affects are between the ages of 18 and 30, and are, therefore, without the vote.

Nevertheless, we intend to oppose this Bill with all our force, for it is more important than ever that women should be offered every facility to enable them to earn their own living, and thus support, or help to support, a family often consisting of several children and a father disabled in the war.

This Bill threatens the very existence of many thousand such families in which the wage-earning capacity of the man has been, through the war, very considerably reduced or even perhaps taken away altogether.

For this reason the Bill in its present form will receive uncompromising opposition from us, and not until an amendment admitting women to all trade unions on equal terms with men has been carried will it meet with our support.

Women in Industry.

The report of the Women's Employment Committee of the Ministry of Reconstruction on "the opportunities for the employment of women, and the conditions of such employment in clerical, commercial, agricultural and industrial occupations after the war," which was issued yesterday, was drawn up before the Government's proposals for the restoration of trade union conditions had been formulated. It is quite clear that all the women who have gone into industry since the beginning of the war as substitutes or as dilutees will have to withdraw to make room for the return of the men; it is not even yet quite so clear that they will have to retire from the industries which were begun during the war and in which they were the original workers. The limitation imposed by this uncertainty gives many of the reflections of the Committee rather the abstract character of what are called pious opinions.

It will, in our opinion, be a retrograde step if women are thrust back into the narrow grooves of industry to which they were confined before 1914. They found during the war a larger life for themselves, and they made a most valuable contribution to the national output. The Committee refrain from making recommendations on this important question of policy, which is indeed one for Parliament, and they restrict themselves almost wholly to the regulations which should be applied to the industries in which women may be permitted to engage. But their confidence in the principle of equality is sufficiently indicated by their recommendation that all clerical posts open to men in the Local Government service should be equally open to women. It is in the light of this principle that an admittedly difficult question should be discussed.

Details about hours, wages and supervision by State inspectors will fall into their proper place when it has been recognised that the woman worker is to have her full opportunity. Parliament can give a lead, but the future of women in industry really depends upon what degree of statesmanship the trade unionism of men is capable of applying to a problem in which the interests of the one sex are different, though but superficially and temporarily, from those of the other.

CIVIL SERVICE POSTS.

200 VACANCIES FOR WOMEN.

Our Civil Service Correspondent writes:

The Waacs, the Wrens, the Wrafs, the temporary woman clerk, the typist, the writing assistant, are being offered by the Civil Service Commissioners 200 vacancies as Woman Clerk in the Permanent Civil Service, to be competed for amongst themselves. All those thousands of women who had hitherto pulled together as one man in the service of the State are now to be pitted against one another in the most pitiless and ruthless of all struggles—a Civil Service Competitive examination—a supreme illustration of the theory of the survival of the fittest.

It is now possible to give the regulations in full for this examination—the first of its kind ever held. It commences on Oct. 16 next, and will be held in London, Birmingham, Bristol, Cardiff, Leeds, Manchester, Newcastle-on-Tyne, Nottingham, Plymouth, Southampton, Edinburgh, Aberdeen, Glasgow, Dublin, Belfast, and Cork. The limits of age are 18 and 30, and candidates must be of the prescribed age on the first day of July, 1919.

No candidate will be eligible who has not rendered six months' approved service prior to July 1, 1919, in one or more of his Majesty's Civil Departments in an established post, as typist, shorthand-typist, writing assistant, clerical assistant or sorting assistant, or as temporary woman clerk or typist, or as an enrolled member of the clerical sections of the Q.M.A.A.C., W.R.N.S., or W.R.A.F., or in a temporary clerical post in the War Department establishments

Candidates will be required to satisfy the Civil Service Commissioners:

(a) That they are unmarried or widows;

(b) That they are duly qualified in respect of health and character.

No person will be eligible who is not a natural-born British subject and the daughter of a father who is a natural-born British subject.

The examination will be in the following subjects, viz.:

1. English composition (including writing and spelling).
2. Précis writing.
3. Arithmetic.
4. General knowledge.

Candidates who fail to obtain such an aggregate number of marks as may indicate in the judgment of the Civil Service Commissioners a competent amount of general proficiency will not be regarded as qualified. It is important to note that candidates who are unsuccessful for women clerkships, but are adjudged on the result of their examination to be qualified for the situation of writing assistant, may be offered permanent posts of the latter grade.

It will rest with the Civil Service Commissioners to determine the Departments to which the successful candidates shall be assigned. In making the assignments the Commissioners will be guided by the requirements of the public service, and will consult, as far as possible, the wishes of Departments for the assignment of particular candidates who have served under them. Subject to these conditions, the wishes of candidates will, where possible, be respected.

Persons who have entered upon or completed a course of education or training for the occupation of teacher, on account of which grants are payable from the Exchequer, will not be qualified to receive appointments until the consent of the Board of Education in England, the Committee of Council on Education for Scotland, or the Commissioners of National Education, Ireland, as the case may be, given in conformity with rules sanctioned by the Lords of the Treasury, has been notified to the Civil Service Commissioners.

A fee of 15s will be required from every candidate attending the examination.

Appointments will be offered to not fewer than 200 of the candidates highest on the list, provided they obtain the necessary aggregate of marks and are duly qualified in other respects.

No person will be admitted to examination from whom the Secretary of the Civil Service Commission, Burlington-gardens, has not received, on or before August 28, an application, in the candidate's own handwriting, on a prescribed form, which may be obtained from the secretary in a few days.

As was pointed out recently, the employment of woman clerk, at one time restricted to the Post Office, where the great majority are still engaged, has now been extended to the following departments:

The Office of the PUBLIC TRUSTEE, London (and in the Branch Office at Manchester).

The GENERAL REGISTER OFFICE, London.

The MINISTRY OF LABOUR, EMPLOYMENT DEPARTMENT.

The BOARD OF EDUCATION, London.

The NATIONAL HEALTH INSURANCE COMMISSION, England.

The NATIONAL HEALTH INSURANCE COMMISSION, Scotland.

SALARIES.

The general scale of salary is £65, by increments of £5 annually to a maximum of £120. To this is added as a temporary increase a war bonus of 15s a week. In the General Register Office, England, and the Public Trustee Office, Manchester, the maximum is £110, while in the Health Insurance Commission, Scotland, it is as low as £100. In the Ministry of Labour the war bonus is £40 per annum, plus 20 per cent. of the ordinary annual salary. The hours of duty are seven daily, but in the Employment Exchanges the hours are eight daily. Promotion to vacancies in higher classes depends on merit. In this department there has been fixed provisionally a proportion of two posts, on the scale of £125, increasing by £5 per annum to £170, for each five posts on the scale £65 to £120, and there will be opportunities for promotion to other senior posts.

In the Ministry of Labour syllabus of the examination, it is interesting to note, in regard to English composition, that irrelevance is considered the greatest of all sins, while next in the order of offences come incoherence, obscurity, needless repetition, and diffuseness. We wonder whether these "grave defects" are peculiar to women candidates, or whether the Civil Service Commissioners had slyly more in their mind the sex of the candidates than the characteristics of a bad composition. On the other hand, we are told, logical and orderly development of the subject, lucidity and just proportion, will be looked upon as cardinal merits. These are supposed to be qualities which are the special property of the opposite sex. Are the Commissioners bent on destroying the charm of our women folk and compelling them to conform to a mere masculine standard before they are considered fit for employment in the Civil Service?

Spelling is another subject on which a warning is issued. A spelling recognised by any standard English dictionary is accepted as correct, but "recognition by an American dictionary is no guarantee of acceptance." The Commissioners are not lacking in courage. Wars have been fought for lesser slights.

GENERAL KNOWLEDGE.

In arithmetic it will be a relief to the candidates to know that a knowledge of recurring decimals is not required. Men have their *pons asinorum* in Euclid. Are recurring decimals in arithmetic woman's?

In regard to general knowledge, the following questions, four only of which are to be attempted, will show what is expected from the candidates:

1. State briefly what you know of any four of the following: Garibaldi, Gordon of Khartoum, Dreyfus, Galileo, Havelock, Captain Cook, Livingstone, Elizabeth Fry, Flora Macdonald, Pasteur, Abraham Lincoln, Florence Nightingale.
2. Discuss the importance of the extension of the franchise to women.
3. In what respects do you consider that the education of girls should differ from that of boys?
4. What is a trade union and what are its purposes?
5. Mention some of the terms of the armistice granted to Germany on Nov. 11, 1918.
6. Give some account of any one of the following characters: Jennie Deans, Maggie Tulliver, Becky Sharp, Jane Eyre, Viola, Hilda Lessways.
7. Why is it necessary to ventilate the places where people live and work? Describe some method by which ventilation is provided.
8. If Shakespeare were alive to-day what changes would he notice in the food and dress of the people?
9. Compare London, Edinburgh, and Dublin as regards position and commercial importance.

This special examination is much simpler than that ordinarily set for the situation of woman clerk. In the latter case the subjects are:

(1) English composition (including writing and spelling); (2) arithmetic; (3) geography; (4) Latin, or French, or German; (5) précis writing; (6) English history; (7) mathematics; (8) one of the languages, Latin, French, German, which is not offered as Subject 4.

702/130

NEW LABOUR CHARTER FOR WOMEN.

GOVERNMENT COMMITTEE'S REPORT ON EMPLOYMENT AFTER THE WAR.

EQUALITY WITH MEN: A 44-HOUR WEEK.

Every aspect of women's work is considered and dealt with in the report of the Women's Employment Committee, which was issued as a Blue Book yesterday.

Appointed in August 1916, the Committee has had to consider and advise, in the light of the experience gained during the war, upon the opportunities for the employment of women, and the conditions of such employment, in clerical, commercial, agricultural and industrial occupations after the war.

It is advocated that free entrance to the clerical posts in Local Government Service should be accorded to women, and that all clerical posts should be opened to men and women alike.

A large extension of Trade Boards is thought to be necessary, and better organisation is recommended in order to secure adequate wages.

A 44-hour working week is put forward for the consideration of the Government, with an annual fortnight's holiday on full pay.

Trades should be allowed within statutory limits to settle their own hours, subject to Government sanction, a substantial majority to rule.

A new Shop Hours Act is required to limit the existing excessively long hours and excessively long spells.

Government experiments are suggested, to see whether a working day much shorter than at present is not economically possible.

WOMEN SUPERINTENDENTS.

As to welfare work, this must continue after the war, when there should be a single Government authority. It should be the employer's duty to study conditions as he now studies cost of production, and the workers should strive for good conditions as they have striven for good wages.

Compulsory action by the State should be used for the purpose of making universal that which experiment has proved to be right. Women superintendents should be appointed where women are employed in substantial numbers.

On the subject of trade unionism, the Committee recommend that organisation should be encouraged in every way. Unions comprising both men and women are stronger for bargaining purposes than those consisting of women only.

TRAINING AT STATE COST.

In a lengthy section on training it is recommended that training must be closely associated to trade methods and requirements.

Apprenticeship, learnership, technical classes, instructional, national, or local factory courses, or combinations of these, should all be utilised.

The cost both of training and maintenance should be made a national charge, and one department only should be made responsible for its administration.

The Committee are strongly opposed to the employment of married women outside their homes. They point out, however, that a free and efficient medical and midwifery service, both before and after confinement, is urgently needed.

They also ask that the Registrar-General's report should give statistics of infant mortality of children up to 5 years old, classified according to the mother's occupation instead of only according to the father's as at present.

PENSIONS FOR MOTHERS.

The system of mothers' pensions, now successfully in operation in the United States, is put forward as a recommendation. Such a system would enable widows and deserted wives, including the wives of men serving long terms of imprisonment, to remain at home and care for their children.

It might also be extended to the wives of men who, by reason of disability, would otherwise be obliged to transfer the support of their families to their wives.

The competition existing between home workers and factory workers is dwelt upon, and it is urged that the regulation of wages by law must proceed with care lest the home worker should be deprived of work altogether.

For this reason the regulation should be effected by means of Trade Boards that can take all the facts bearing upon the relative position of home workers and factory workers into consideration. Home work should not be encouraged in any trade unless it is clear that the circumstances are such that the maintenance of adequate wages is possible.

PROTECTION IN SHOPS.

The Committee consider that there is no reason why less protection should be afforded to workers in shops than to those in factories. They express the opinion that the Factory Department should have the same power to deal with offences against the Truck Act in shops as they have at present in factories and workshops, so long as the system of fines continues, and recommend that provisions to this effect should be inserted in the Truck Act.

Without proposing to take away from the local authorities powers regarding hours of work and sanitary conditions in shops, the Committee think that these powers should be carried on under the supervision and with the advice of the department concerned.

To bring about closer co-ordination between the local authorities and the Factory Department it is suggested that a grant-in-aid should be paid to the local authorities upon any conditions which the Government might see to attach to the grant.

DEMOBILISED WOMEN.

PLACES AT AIR MINISTRY TAKEN BY EX-SOLDIERS.

Consternation reigns among the temporary lady clerks employed in Government departments, as a result of the "comb out" which is already taking place under the powers conferred upon Sir Auckland Geddes by the War Cabinet.

At the Air Ministry large numbers of lady clerks and typists have received notice, the "Daily Chronicle" understands. Moreover, the whole of the female messenger staff, whose chocolate uniforms have become so familiar to visitors, are to be dispensed with. They are to be replaced by wounded and demobilised soldiers, many of whom are already being initiated into their duties. It is understood that their pay will be £2 10s. per week—a considerable increase on the wages of the girl messengers who have "carried on" during the war. Most of the men will, of course, be also in receipt of pensions for disablement.

The higher grade women—many of whom are in receipt of comparatively large salaries and are married—will probably be the next to go. A return has been called for, with a view to their substitution by male clerks, preferably demobilised soldiers.

The "Daily Chronicle" also learns, on good authority, that the question of the demobilisation or disbandment of the W.R.A.F. is under consideration. If the force is disbanded some of the women will probably be employed by the R.A.F.

Yorkshire Observer 9. 8. 19.

"SAVE THE CHILDREN."

Sir,—The Government has invoked the help of the British people in relieving the distress from famine in Europe and Asia Minor. Lord Robert Cecil has expressed the hope that the relief agencies appealing to the public under the Government's offer to double all voluntary gifts (up to £200,000) raised in the United Kingdom "will receive response that will bring to some millions of children . . . a message of practical sympathy." "There is no doubt whatever," said Lord Robert in the Commons on July 21, "that in large parts of Central Europe, including some parts of Germany, the children, the babies, are actually dying from want of food and want of milk. I do not believe that can be questioned."

Other distinguished men appeal to us. Lord Curzon sends out "an urgent call to the people of the British Empire to play their part in the great task of reconciliation and mercy." General Smuts asks us all "to exert ourselves to the utmost in the great work of saving the wreckage of life and industry." Sir William Goodes (British Director of Relief Mission) in Paris writes to tell us that twelve and a half millions are being spent by our Government in Europe, and this sum will all be used up or allocated before the harvest. Still there will be urgent need, he says, for medical comforts and for supplementary food, particularly for the children.

Will you be so good as to allow us space to remind your readers that the Save the Children Fund (hon. sec., Mrs. Buxton, 39, High Holborn, W.C.1.) has set itself the task of carrying this message to the nation? This is a central Relief Fund to be administered through the various excellent relief agencies which are at work in different parts of the famine areas. The fund does not confine itself within the limitations of the Government grant (Germany and part of Russia are excluded from benefit) but sends help where help is most needed irrespective of nationality. Donations, however, may be earmarked for any particular country. "What you have already done," writes Mr. C. K. Butler (Head of the British Mission to Vienna) "has been and will be of incalculable benefit to the suffering."

This great work is the first life-saving scheme of international scope, and it may prove to be the greatest mission that compassionate men have ever embarked upon. It can only succeed if people of all classes, parties, and beliefs will unite and ally their efforts with those of the Government.

MARY R. MACARTHUR.
PAMELA McKENNA.

Report of Women's Employment Committee.

The Women's Employment Committee was appointed in August, 1916. Originally a sub-committee of the Reconstruction Committee of that date, it was continued as a Committee by Dr. Addison, M.P., when he became Minister of Reconstruction in 1917. The chairman, Sir John Simon, K.C., M.P., resigned in 1917, whereupon Major Hills, M.P., was appointed in his place.

The terms of reference were as follows:—"To consider and advise, in the light of the experience gained during the war, upon the opportunities for the employment of women, and the conditions of such employment, in clerical, commercial, agricultural, and industrial occupations after the war."

The Committee's report has now been published as a small blue book [Cd. 9239] from which we reproduce in part the Summary of their recommendations.

As to Remuneration.—Organisation is of chief importance in securing adequate wages: more general and better organisation is therefore recommended. In addition, sufficient training for industry and, in the case of organised workers, a large extension of Trade Boards are thought to be necessary. The Committee's suggestions on the regulation of wages by law have already been presented in a Memorandum in March, 1917.

As to Hours.—The relaxation of the Factory Acts allowed during war should cease at its termination and excessive overtime, long spells, night work, and Sunday work should be forbidden. There is a prima-facie case for a reduction in legal maximum hours, in overtime, and in the length of the shift, and for the abolition of work before breakfast, and the Government should immediately institute inquiries with a view to amending the Factory Acts. The Committee recommends the possibility of a 44-hour working week and an annual fortnight's holiday on full pay for the consideration of the Government. Trades should be allowed, within statutory limits, to settle their own hours, subject to Government sanction, a substantial majority having power to bind the minority. Further information is urgently needed as to hours worked in offices, and this should be inquired into. A new Shops Act is required to limit the existing excessively long hours and excessively long spells. Government factories should make experiments to see whether a working day much shorter than at present is not economically possible, and private employers should be urged to follow suit.

As to Welfare or Conditions.—Welfare work must continue after the war, when there should be a single Government authority. The Industrial Fatigue Research Board will take the place of the Health of Munition Workers Committee for conducting research and investigation. It should be the employer's duty to study conditions as he now studies cost of production; and workers should strive for good conditions as they have striven for good wages. The workers should operate through Whitley Councils and Works Committees, on which organised women must be fully represented. Factory inspectors should be encouraged to call conference of employers and employed. Compulsory action by the State should be used for the purpose of making universal that which experiment has proved to be right. It is hoped that the work of the factory inspector will become more and more merged in that of the expert adviser. It requires reorganisation and should be scientifically developed with special reference to health and safety in the factory, and investigation of questions of industrial hygiene, fatigue, disease, and mortality. All factories employing women in substantial numbers should have a woman superintendent, who should have managerial status with strictly defined duties, such duties not extending beyond the walls of the factory except in abnormal cases. There should be women members on all boards and committees dealing with the interests of women, whether in industry, commerce, or clerical work.

As to Trade Unionism.—Organisation should be encouraged in every way. Trade Unions should play an important part in preventing unemployment. Unions comprising both men and women are stronger for bargaining purposes than those consisting of women only, but there is work for both classes of unions to do.

As to Training.—Much of the training given for munition making is immediately apt for peace requirements and could be adapted to these requirements without difficulty. The special attention of the Ministry of Reconstruction is called to the advisability of so adapting the training scheme of the Ministry of Munitions. Trade training courses must be planned with a close watch on supply of labour to prevent overstocking. Training must be closely associated to trade methods and requirements. Only individuals able to benefit by training and afterwards to follow the trade in which they have been trained should be admitted to the classes. Methods of training should vary from trade to trade, and the greatest elasticity consistent with efficiency should be encouraged. Apprenticeship, learnership, technical classes, instructional, national, or local factory courses, or combinations of these should all be utilised. Maintenance for women during training must be provided, and should extend to the Health Service touched on in the Report as well as to industrial and other technical training. The cost both of training and maintenance should be a national charge, and one department only be made responsible for its administration. The Ministry of Labour should at an early date appoint a suitably composed Committee to deal with the problem of providing training for women both during resettlement and afterwards; such a Committee to contain strong representation of industrial experience, including organised labour, both men and women and employers. The Government departments chiefly concerned should also be represented. This Committee should be charged with the work of surveying the field, investigating existing facilities and advising as to the extent and directions in which these should be amplified, of formulating schemes and advising as to necessary executive machinery, central and local.

As to Employment of Married Women.—The employment of married women outside their homes is not to be encouraged. More information is required as to the numbers and distribution of employed married women. An expert Committee of Inquiry should be set up. The Registrar-General's Report should give statistics of infant mortality of children up to five years old, classified according to the mother's occupation, instead of only according to the father's, as at present, and death certificates of such children should contain this information. Hospital records should give the occupation of their married women in-patients. Factory crèches in normal times are not approved of.

As to Mothers' Pensions.—The Committee recommend that some system of mothers' pensions should be established, on the lines of that now successfully in operation in the United States, which would enable widows and deserted wives, including the wives of men serving long terms of imprisonment, to remain at home and care for their children. Such a system might with benefit be extended to the wives of men who by reason of disability would otherwise be obliged to transfer the support of their families to their wives.

As to Suitability.—The restrictions on dangerous and unsuitable trades imposed by the Factory Acts and relaxed during the war should be re-imposed immediately on peace. The determination whether trades are suitable or unsuitable must be left to the Government department concerned, whose powers should be enlarged as outlined in the Report. Joint Industrial Councils and Trades Union Committees should greatly help in this. An immediate inquiry should be held into conditions in offices.

Further recommendations deal with Local Government service, homework and shops.

In an Appendix tables are printed showing female membership of Trade Unions in the United Kingdom. In a note we are told that in many unions which admit both male and female members the exact numbers of each sex are not known. In these cases the figures given are based on estimates supplied by the unions. We reproduce a portion of the summary table:—

Female Membership of Trade Unions in the United Kingdom, 1914-1917.

	Female membership at end of			
	1914.	1915.	1916.	1917.
Mining and quarrying	140	2,300	2,917	5,562
Metal, engineering, &c. trades ...	1,041	2,485	4,453	7,745
Totals	1,181	4,785	7,370	13,327

WOMEN'S EMPLOYMENT COMMITTEE: REPORT.

The Report of the Women's Employment Committee has now been published.* This Committee was appointed in August, 1916, under the chairmanship of Sir John Simon, K.C., M.P., who was succeeded in 1917 by Major Hills, M.P., with the following terms of reference: "To consider and advise, in the light of the experience gained during the war, upon the opportunities for the employment of women, and the conditions for such employment, in clerical, commercial, agricultural and industrial occupations after the war."

The opening paragraphs of the Report deal with conditions limiting its scope, and are followed by a section of "General Observations on Employment of Women," which is treated under the heads of "Opportunity and Suitability," "Women and the Race" and "Women and Men as Workers: How they Differ." An estimate of the numbers of women in employment in July, 1914, and July, 1918, is then given, and this is followed by a section on "Opportunities for Employment after the War," a section which is mainly occupied with the capacity of women for new work of various grades and descriptions. "Conditions of Employment" are then dealt with at some length, the word "conditions" being used so as to cover all topics which, though they may not be conditions in the strict sense, yet have to be considered if women's employment is to be surveyed as a whole. These topics are grouped under the heads of: (*a*) Remuneration; (*b*) Hours; (*c*) Welfare; (*d*) Trade Unionism; (*e*) Training; (*f*) Employment of Married Women; (*g*) Suitability of Employment; (*h*) Home Work.

It is not possible here to do more than thus indicate the field covered by the Report, but the following Summary of the Committee's Recommendations is reproduced in full:

RECOMMENDATIONS.

As to Local Government Service.

Free entrance to the clerical posts in Local Government Service should be accorded to women. All clerical posts open to men should be open to women. With a view to securing a proper standard of education it should be required that no woman be appointed who had not passed such school or special examination as might be prescribed.

As to Remuneration.

Organisation is of chief importance in securing adequate wages: more general and better organisation is therefore recommended. In addition, sufficient training for industry and, in the case of unorganised workers, a large extension of Trade Boards are thought to be necessary. The Committee's suggestions on the regulation of wages by law have already been presented—see Appendix V. of the Report.

As to Hours.

The relaxation of the Factory Acts allowed during war should cease at its termination, and excessive overtime, long spells, night work and Sunday work should be forbidden. There is a prima facie case for a reduction in legal maximum hours, in overtime, and in the length of the shift, and for the abolition of work before breakfast, and the Government should immediately institute enquiries with a view to amending the Factory Acts. We recommend the possibility of a 44-hours working week and an annual fortnight's holiday on full pay for the consideration of the Government. Trades should be allowed, within statutory limits, to settle their own hours, subject to Government sanction, a substantial majority having power to bind the minority. Further information is urgently needed as to hours worked in offices, and this should be enquired into. A new Shops Act is required to limit the existing excessively long hours and excessively long spells. Government factories should make experiments to see whether a working day much shorter than at present is not economically possible, and private employers should be urged to follow suit.

As to Welfare or Conditions.

Welfare work must continue after the war, when there should be a single Government authority. The Industrial Fatigue Research Board will take the place of the Health of Munition Workers Committee for conducting research and investigation. It should be the employer's duty to study conditions as he now studies cost of production; and workers should strive for good conditions as they have striven for good wages. The workers should operate through Whitley Councils and Works Committees, on which organised women must be fully represented. Factory inspectors should be encouraged to call conferences of employers and employed. Compulsory action by the State should be used for the purpose of making universal that which experiment has proved to be right.

It is hoped that the work of the factory inspector will become more and more merged in that of the expert adviser. It requires re-organisation and should be scientifically developed with special reference to health and safety in the factory, and investigation of questions of industrial hygiene, fatigue, disease and mortality. All factories employing women in substantial numbers should have a woman superintendent, who should have managerial status with strictly defined duties, such duties not extending beyond the walls of the factory except in abnormal cases. There should be women members on all Boards and Committees dealing with the interests of women, whether in industry, commerce or clerical work.

As to Trade Unionism.

Organisation should be encouraged in every way. Trade Unions should play an important part in preventing unemployment. Unions comprising both men and women are stronger for bargaining purposes than those consisting of women only, but there is work for both classes of unions to do.

As to Training.

Much of the training given for munition making is immediately apt for peace requirements and could be adapted to these requirements without difficulty. The special attention of the Ministry of Reconstruction is called to the advisability of so adapting the training scheme of the Ministry of Munitions. Trade training courses must be planned with a close watch on supply of labour to prevent overstocking. Training must be closely associated to trade methods and requirements. Only individuals able to benefit by training and afterwards to follow the trade in which they have been trained should be admitted to the classes. Methods of training should vary from trade to trade, and the greatest elasticity consistent with efficiency should be encouraged. Apprenticeship, learnership, technical classes, instructional, national, or local factory courses, or combinations of these should all be utilised. Maintenance for women during training must be provided, and should extend to the Health Service as well as to industrial and other technical training. The cost both of training and maintenance should be a national charge, and one department only be made responsible for its administration. The Ministry of Labour should at an early date appoint a suitably composed Committee to deal with the problem of providing training for women both during resettlement and afterwards; such a Committee to contain strong representation of industrial experience, including organised labour, both men and women, and employers. The Government Departments chiefly concerned should also be represented. This Committee should be charged with the work of surveying the field, investigating existing facilities and advising as to the extent and directions in which these should be amplified, of formulating schemes and advising as to necessary executive machinery, central and local.

As to Employment of Married Women.

The employment of married women outside their homes is not to be encouraged. A free and efficient medical and midwifery service, both before and after confinement, is urgently needed. More information is required as to the numbers and distribution of employed married women. An expert Committee of Enquiry should be set up. The Registrar-General's Report should give statistics of infant mortality of children up to five years old, classified according to the mother's occupation, instead of only according to the father's, as at present, and death certificates of such children should contain this information. Hospital records should give the occupation of their married women in-patients. Factory crèches in normal times are not approved of.

As to Mothers' Pensions.

We recommend that some system of Mothers' Pensions, on the lines of that now successfully in operation in the United States, which would enable widows and deserted wives, including the wives of men serving long terms of imprisonment, to remain at home and care for their children, should be established. Such a system might with benefit be extended to the wives of men who by reason of disability would otherwise be obliged to transfer the support of their families to their wives.

As to Suitability.

The restrictions on dangerous and unsuitable trades imposed by the Factory Acts and relaxed during the war should be re-imposed immediately on peace. The determination whether trades are suitable or unsuitable must be left to the Government Department concerned, whose powers should be enlarged. Joint Industrial Councils and Trades Union Committees should greatly help in this. An immediate enquiry should be held into conditions in offices.

As to Homework.

Homeworkers and factory workers are often in competition and modern industrial developments tend to depress the level of remuneration of the former. The regulation of wages by law must proceed with care lest the homeworker should be deprived of work altogether. For this reason the regulation should be effected by means of Trade Boards that can take all the facts bearing upon the relative position of homeworkers and factory workers into consideration. Homework should not be encouraged in any trade unless it is clear that the circumstances are such that the maintenance of adequate wages is possible.

The general scheme of supervision by Local Health Authorities should be retained, but their powers require strengthening in the direction of prohibiting homework under conditions harmful to the consumer as well as to the worker. It is desirable that Trade Board Officers should have legal right of access to the lists of outworkers kept by Local Authorities. Licensing of homeworkers is not recommended.

P.T.O

* Cd. 9239, price 6d. net.

As to Shops.

We consider that there is no reason why less protection should be afforded to workers in shops than to those in factories, and we recommend that the provisions of the Factory Acts with regard to hours, with the amendments we have suggested, should be applied to shops.

A further point arises with regard to fines and to sanitary conditions. At present no Government authority has power to improve the conditions with regard to fines. Further, the law with regard to the enforcement of the provisions of Section 22 of the Public Health Acts Amendment Act, 1890, is far from clear.

We think that the Factory Department should have the same power to deal with offences against the Truck Act in shops as they have at present in the factories and workshops so long as the system of fines continues, and we recommend that provisions to this effect should be inserted in the Truck Act.

With regard to the administration of the law with regard to hours of work and sanitary conditions we think that closer co-ordination should be ensured between the local authorities and the Factory Department. Without proposing to take from the local authorities powers which have already been confided to them by Parliament, we think that these powers should be carried on under the supervision and with the advice of the Department concerned. We suggest that this object could be satisfactorily attained with the minimum of friction if a grant-in-aid were paid to the local authorities dependent upon any conditions which the Government might see fit to attach to the grant.

THE EIGHT-HOUR DAY ABROAD.

FRANCE.

Mining Industry.

The issue of the *Journal Officiel* for 25th June contains the text of a law passed on the preceding day amending the existing legislation concerning the length of the working day in the French mining industry.

The law of 31st December, 1913, provided that workers in coal mines employed underground in the actual getting of coal should not normally be employed for more than eight hours per day. The present Act makes this legal maximum applicable to underground and surface workers—whether manual or other—employed in and about coal mines of any description or in and about other mines, open works and quarries, as well as in prospecting work.

For underground workers the working hours are to be calculated, for each shift, and for each grade of worker, from the scheduled time at which the first workers enter the shaft in descending until the scheduled time at which workers reach the surface in ascending.

In the case of mines where entry is by adits the working hours must be calculated from the arrival at the adit or entry up to the return to the same point.

The law is not to invalidate agreements or customs equivalent to agreements, under which, in certain mines, a normal working day of less than eight hours has been fixed.

In the case of operations of a continuous nature the conditions of labour will be laid down by public administrative regulation, but the actual time of attendance of each worker must not exceed forty-eight hours in a week, and the number of workers affected must not exceed 5 per cent. of the total number employed in the undertaking,

The length of the working day may be increased beyond eight hours in case of war or pressing necessity.

In no case may the earnings of any class of workers, as the result of the application of the present law, be less than those recorded at the date of its promulgation.

ITALY.

State Railways.

A decree establishing a normal working day of eight hours for State railway workers in Italy is published in the *Gazzetta Ufficiale* of the 16th June. The text of the new measure is as follows:—

1. An eight-hour day and a weekly day of rest must be granted to persons employed in the service of the State railways, with certain exceptions to be determined by the Minister for Railways and Maritime Transport, due regard being paid to the varying conditions of service in the different grades and classes of employees.

2. In the case of grades or classes excluded from the operation of the eight-hour day rule, a reduction in the hours now fixed for working time and shifts must be introduced.

3. The method of application of the aforesaid provisions and the times at which they shall come into force shall be fixed by the Minister for Railways and Maritime Transport with due regard to the technical difficulties involved in the enforcement, and for the necessity of maintaining the continuity and regularity of the service.

The provisions of the present decree shall take effect as from 15th June, 1919.

Times – 702

WOMEN IN INDUSTRY.

TWO GOVERNMENT REPORTS.

(FROM AN ENGINEERING CORRESPONDENT.)

The employment of women during the war on processes that had always been sacrosanct to men was not effected without grave difficulties, and it is common knowledge that in the engineering trades it was often neglected not because the women were not available or could not do the work but because the men would not allow them, and no authority would enforce the law that did. Yet in spite of these and other impediments it appears, from the recent report of the War Cabinet Committee on Women in Industry, that of some 700 000 women and girls directly replacing males in industry proper and Government establishments in January, 1918, about one-half were employed in the metal trades; and to these must probably be added at least the 170,000 engaged in those trades before the war.

It is not surprising therefore that the matter has attracted the attention of the Government, and that in August 1916, the Women's Employment Committee was appointed with a reference which, without including the complex problems of demobilization, asked for advice, "in the light of the experience gained during the war, upon the opportunities for the employment of women, and the conditions of such employment . . . after the war." Its scope was therefore far wider than that of the War Cabinet Committee on Women in Industry appointed in September 1918, under the chairmanship of Mr. Justice Atkin, to whom all that was referred was "to investigate and report upon the relation which should be maintained between the wages of women and men," and to inquire into alleged breaches of Government pledges. Both Committees lose authority in having little or no membership representing those who are practically engaged in manufacturing; though the later Committee has what engineers will appreciate as the advantage of including Mr. B. H. Morgan, who in addition to his personal experience brings an intimate acquaintance with all controlled industry acquired while he was a prominent officer of the Ministries of Munitions and of National Service.

WOMEN'S EMPLOYMENT COMMITTEE.

The Report of the Women's Employment Committee points out that there is much work which women could do, but which, through its undesirable physical and other conditions, is not suitable for them. It instances foundry work as an example, and suggests that women's employment in such occupations should be prohibited—a suggestion that will hardly be borne out by the experience of many foundrymen, who on the contrary have found women keep healthy as well as prove extremely useful in this work. At the other end of the scale are occupations that are clearly suitable, and between them is a wide field of employment which, with more or less mechanical assistance, could be made so. In the Committee's view the scope of women's usefulness in industry will become even wider than it is at present given not only technical improvement and proper workshop organization but also efficient Government supervision. It may perhaps be questioned whether engineers, either employers or employed, will be as keen as the Committee on their last condition. The Committee, without any information as to the probable volume of trade and general state of employment after the war, has assumed as a working hypothesis that trade will be favourable, and doubtless many of the conclusions would have to be revised if unhappily it were not.

In the meantime, with the aid of memoranda by the Home Office and by Mr. Morgan, the Committee indicates the classes of trade it regards as unsuitable, and on the other hand it shows from the experience of the war that in suitable occupations women have done distinguished work in every grade of industry, from full managers, as they have been, in shell, cartridge and filling factories—the list might have been longer—shop supervisors and forewomen, and scientific works, through process work in all grades of skilled, semi-skilled and unskilled operations, to labourers' work of all kinds within their strength.

EQUAL PAY FOR EQUAL WORK.

The remuneration of women is an aspect of their employment in which their interests and those of men often seemed to be identical without really being so. Women naturally wanted to get all they could, particularly since in the opinion of all parties, as typified in almost all the evidence on the point given before the War Cabinet Committee, "the old level of wages for women was unduly and unnecessarily low"; and this not only in the notoriously sweated trades, for the same Committee found that "the difference between the average of female earnings in such trades and those in several thoroughly well-organized trades was almost negligible." Accordingly, when men pressed for women to receive the same time rate as men, women were often tempted to welcome and adopt the demand. It was obvious, however, that such a claim could be to the advantage of women only if their average output and the cost of their employment was no greater than that of men; and accordingly, as was stated for their own men by the National Transport Workers' Federation before the War Cabinet Committee, men insisted on equal pay for women, not in order to procure them due remuneration in their employment, but in order to reduce or prevent their employment by making it uneconomical. The disingenuous excuse for the demand has also been put forward, as for instance in Mrs. Sidney Webb's Minority Report to the War Cabinet, that the Civil Service, Judges, and Cabinet Ministers are paid according to the job to which they are appointed, and not according to the amount of work they do—an argument that ignores the fact that industrial work is done under economical competition, which does not touch the services cited.

Not all the women workers, however, were caught by this bait; in the statesmanlike memorial, for example, presented to the Prime Minister by Lady Rhondda on behalf of the Women's Industrial League, the danger to women of equal time rates was expressly pointed out, and what was claimed was equal pay for equal net output. The Women's Employment Committee—Mr. Morgan, Mr. R. H. Glanfield, and Miss Collet dissenting—concludes that equal time rates for the jobs on which women are employed is the only satisfactory settlement, and that anything less would "tend to undermine the whole basis of collective bargaining and react injuriously on the standard of life built up by organized effort." In this view it differs not only from the Women's Industrial League, but also from the War Cabinet Committee, which concluded in favour of equal pay for equal net output.

The Committee recommends that organization should be encouraged in every way, and is of opinion that, while there may be work both for mixed unions and for unions of women alone, the advantages of mixed unions are the greater. It looks to trade unions to play an important part in preventing unemployment, and it would like to see advantage taken of the extension of unemployed insurance in order to strengthen trade union organizations. Its view, which it considers has been reinforced by war-time experience, is that "complete and efficient trade unionism is essential, not only for the well-being of the workers engaged in industry, but in the interests of the State." It bases this view on the necessity to healthy industrial development of the coherent and intelligent expression of the corporate opinions of those engaged in industry on all questions that affect them and their trade. An essential part of its programme appears to be to prevent employers from dealing directly with their workmen, as the report deprecates the formation of works committees in imperfectly organized trades on the ground that it would enable employers to do this, and thus to deprive employees of the "advantage of collective bargaining." It will be seen, therefore, that as in Mrs. Webb's Minority Report to the Cabinet, the term "collective bargaining" is limited to bargains made with the whole trade. Much of the argument habitually used in favour of it is based on the disparity of strength between an employer and an individual workman; but the conclusion is here applied to arrangements made by an employer with the whole body of his workmen or of his workmen in particular trades, and mutual accommodation between those actually engaged in the works is made subject to the approval of the entire trades concerned and of any extraneous opinion that may have captured their trade unions. No suggestion or recommendation is made on the difficult question of how women can be represented efficiently by a mixed union, while men retain opposite interests to women; but Mr. Morgan and Mr. Glanfield dissent from the recommendations of mixed unions.

Recommendations are also made for increased scientific strength in the Home Office factory inspectorate, and for extended training on Ministry of Munitions lines.

SUCCESS AND ITS REWARD.

In a paper on women's work in engineering and shipbuilding during the war, given before the North-East Coast Institution of Engineers and Shipbuilders, Lady Parsons emphasized some of the more skilled work that women learned to do, because she finds a strong tendency among engineers to consider that women are capable of doing only repetition work on fool-proof machines.

The success achieved by women was due to the sensible training given them. They had the advantage of receiving a short intensive training in the technical schools set up by the Ministry of Munitions and in private firms, and they had the great privilege of being taught their work by skilled men who ungrudgingly gave their experience. Boys and men are now benefiting from the methods that proved so successful with women; and they must not forget that women prepared the way for this sort of intensive training, and that their entry into the works also brought about the improved conditions in the works.

SKILLED WORK.

Quite a large number of girls were able to set and grind their own tools, and a small proportion could set up their jobs from drawings. They could mill all the parts of the breech mechanism of howitzers, screwing the internal thread for the breech block, milling the interrupted screw and screwing the cone that fits into the breech block, and mill firing pins and all the parts of gun sights, in each case setting up their own work. In a firm repairing guns, two girls dealt with guns varying from the 13in. naval gun, weighing 50 tons, to the 6lb. tank gun. They could design repairs to guns and mechanism and calculate the factor of safety of a damaged gun by logarithm and slide rule. They were designing suitable repairs, making the working drawings and carrying out the work and, if necessary, making the special tools to do it. Others were hand lapping bores of guns, clearing the rifling grooves, and making casts of the bores of guns in gutta percha. The girls who did this work were taught in one day to work a 12½in. lathe. This included setting up the work, dividing on change wheels, and cutting an internal screw thread.

In a still surviving factory staffed by women, they are employed on all the parts of the engine of a motor tractor. They are cutting out the crankshafts from the solid forging, using the drilling and slotting machines, making all the tools, jigs, and fixtures required for the work of the factory, setting up their work, and designing some of the tools. This factory is generously continued by the employers, in order to give the women, who worked so well during the war, the opportunity to continue their training in the hope of employment as soon a trade conditions are more settled.

The women acetylene welders established a good reputation early in the war, and they have been steadily working on jobs interchangeable with men. In a firm specializing on lathes women are machining all the parts of a 6½in. and an 8in. lathe; they are doing the bench work, and assembling and fitting. Other girls have been successfully employed in designing and making machine tools. Another in one of the technical workshops could make every article that came into the shop from beginning to end, and she could mill gauges true to 0·00003in.

In metallurgy some useful experiments were made in the causes for failure of metal and alloys and the methods of producing reliable metals. In an experiment tank, models of the hulls of ships and seaplanes were tested with a view to improving their form. In electro-technics tests were made of Admiralty instruments, ammeters, and volt-meters, resistance boxes and standards, the practical part of a research on the heating of buried cables, and the preparation of plans for the installation of a new generating set.

TRADE UNION ATTITUDE.

About 1½ million women received a certain amount of training in schools at a cost to the country of over £30,000,000. All these prospective wealth-producers are scrapped; the country is much the poorer. The engineering industry is again barred to women by an agreement between the Treasury and the trade unions. Though 90 per cent. of the workers on munitions were women, no woman sat on the conferences that preceded the agreement of February, 1916, between the Treasury and the unions, and consequently the women's point of view was never raised. The Labour Party, while demanding full political equality for women and the right to sit in the House of Lords and to practice at the Bar and as solicitors, will not grant women industrial equality by permitting them to work on the same jobs as men, to have adequate representation on committees, and to enter the higher ranks of those industries in which the war has shown they are perfectly fitted to work.

"LABOUR PROBLEMS AFTER THE WAR"

I.--INDUSTRIAL CONDITIONS :

Demobilisation.
Restitution of Trade Union Practices.
Displacement of Substitutes.
Transference of Women.
Position of Semi-Skilled Labour
Boy Labour.
Workshop Control.
General Use and Administration of Labour Exchanges.
Extension of Unemployment Insurance.
Schemes for Absorbing Unemployed.
Re-Establishment of Factory and Workshop Acts.
Hours of Labour and Standard Wages.
Emigration.
Re-patriation of Belgians and position of Aliens.

II.--FINANCE :

Taxation--Direct and Indirect.
Income Tax.
Taxation of Wages.
Taxation of War Profits.
Tariffs for Revenue Purposes.

III.--NATIONAL PRODUCTION :

Public Ownership.
Agricultural Development.
Land Acquisition.
Coal Nationalisation.
State and Local Housing Schemes.
Armament Production.
Education and Research applied to Industry.
New Trades.

IV.--PROBLEMS OF DISTRIBUTION :

State Ownership of Railways.
Canal Development.
Traffic Control and Co-ordination.
Control of Merchant Shipping.
Developmeny of Motor Transport for Agricultural and Industrial Purposes.
Dock Improvements.
Control of Prices of Commodities.
Co-operation.

V.--PROBLEMS OF EXCHANGE :

Tariffs for Trade Purposes.
Imperial Preference.
National Banking
Position of Private Banks.

VI.--PROBLEMS OF GOVERNMENT :

Electoral Reform.

702/135 702

VI.--PROBLEMS OF GOVERNMENT :

Electoral Reform.
Adult Suffrage.
Women's Position.
Shorter Qualification.
Payment of Returning Officers' Fees.
Curtailment of Election Expenditure.
Redistribution.
Control of Foreign Policy.

VII.--NATIONAL HEALTH :

National Insurance Act Amendment.
State Medical Service.
Clinic Development.
Maternity Schemes.

VIII.--MILITARY PROBLEMS : (Contingent on Pease Settlement).

Pensions.
Training of Disabled.
Employment of Men returned from Colours (See I.).
Moratotium Arrangements, &c.
Dimensions of Army (Pay in Peace Time, Democratisation, &c.)
Military Service Act.
Military Training.

IX.--EDUCATION.

EMPLOYMENT OF WOMEN.

FATE OF THE GLOVE INDUSTRY.

To the Editor "Irish Independent."

Sir—A report having appeared in the Press under the heading, "L.G.B. criticised by Lady Fingall," I think it well to correct the erroneous impression which might be produced by such a heading. So far from desiring to criticise the L.G.B., my committee desire to place on record their appreciation of the Board's invariable courtesy and assistance in their work.

The Central Committee on Women's Employment for Leinster, Munster, and Connaught, of which I have the honour to be president, was formed in Nov., 1914, by the then Chief Secretary for Ireland (Mr. Birrell), as a Cabinet Advisory Committee, for the purpose of formulating schemes for the employment of women who had been thrown out of work by the war; and the memorandum of its appointment embodied the principle that special schemes of employment should be educational and socially beneficial. It was soon found, however, that it was necessary to act in an executive as well as an advisory capacity, with the object of relieving unemployment upon as economic a basis as possible.

WAR OFFICE CONTRACTS.

Our committee has successfully carried out War Office contracts, and up to the present time 218,000 army shirts have been cut out and manufactured in the workrooms organised by the committee. Since our formation we have handled a turn-over of more than £100,000 on a capital of less than £4,500, part of which has already been refunded, while we are in a position to repay the remainder when required to do so.

Women have been trained in shirt-cutting, shirt-making on power-machines, and as shirt-inspectors; while a glove-knitting industry, both machine and hand, has been successfully started and worked for the past two and a-half years in Dublin. This machine glove-knitting industry alone employs between 60 and 70 girls, who have manufactured 130,450 pairs of gloves, the average wage of the girls being 19s. a week, while the experts earn up to 35s.

COMMITTEE'S DILEMMA.

The committee are now faced with the immediate prospect of having to close down the machine-knitting industry, the contracts for army gloves necessarily ceasing. In these circumstances they view with grave anxiety the future of these workers, whom they have trained to be efficient, self-supporting wage-earners, and they regard with dismay the probable demoralising results likely to ensue in consequence of skilled workers being compelled to accept the Government out-of-work donation. My appeal, therefore, would be for some public-spirited business man to come forward and take over this industry.

In view of the fact that many hundreds of girls and women have been trained under the auspices of this committee, we feel that our experience in dealing with the problem of unemployment and our success in initiating and carrying out schemes for industrial training entitles us to representation on the Committee of Reconstruction about to be appointed.

The committee is a representative one, and consists of the following names:—Vice-President, Miss E. Buchanan; Lady Arnott, Mrs. P. J. Brady, Mrs. Michael Cox, Miss Gleeson, Mrs. Noel Guinness, Mrs. Macken, Mrs. H. MacDermot, Miss Mellone, Mrs. Michael Murphy, Mrs. Owen Lewis, Miss Edith O'Reilly, Lady Russell, Mrs. Gaisford St. Lawrence.

E. M. FINGALL (President).

121 Lr. Baggot street, Dublin, Jan. 20, 1919.

THE WOMEN'S LEAD.

Old legends die hard, and in no other country are they uprooted with such great difficulty as in Great Britain. No clearer proof has ever been given of this than is set forth in Lady RHONDDA'S recent correspondence with the PRIME MINISTER. Here we have clear evidence that Labour, which claims to be the only section of the community which can knock off the chains which have fettered national action throughout the centuries, only proposes to do so in order that it may substitute other and stronger chains of its own forging.

Advocating liberty for all, it is placing every conceivable obstacle in the path of the women who rendered victory possible. Jealous of the old privileges on which it so often insisted in its own and the national despite, it exacted a bargain over the introduction of female labour in the national factories, to which the Government had perforce to yield in the more immediately pressing national necessities. Now that the falsity of the majority of the provisos on which it based its terms has been demonstrated by the stern reality of accomplished fact, despite the handicaps to success which it was able to impose, Organised Labour not only clamours for its pound of flesh, but actually insinuates that the terms of the bargain shall be extended to include new spheres in which women have demonstrated their capability, spheres, even, which were never contemplated by either party when the bargain was made.

The reason for this is not far to seek. The Women's Industrial League, of which Lady RHONDDA has accepted the Provisional Presidency, have placed "equal pay for equal output" in the forefront of their programme, whereas the whole trend of Trade Union policy has been towards a dead level of pay for restricted output. The trade unions fear, apparently, that the wider employment of female labour will result in the development of competitive individual output, beneficial to the community and even to the individual workers themselves, but subversive of every trade union tradition. Whether this be the case or not, the memorial suggests that women, initiated to the problems of labour, are approaching them with open minds and a vivid interest, which is a happy augury for the influence they may shortly exercise in the political sphere. Mr. LLOYD GEORGE has assured the Women's Industrial League of his "full sympathy with their claims." He and we may possibly discover that our full support, as well as our sympathy, will go far to remove those vested prejudices which are so much fuller of menace to the progress of healthy national reconstruction than any of the vested interests which Labour professes to regard with such dread.

Christian Commonwealth

1 1 19.

Women and Reconstruction.

The part women should play in reconstruction has so far been little more than a pious aspiration. It is well that the Ministry of Reconstruction are beginning to make some effort to seek their co-operation before all plans are completely settled. At this late date they have set up a Women's Advisory Committee which seems to have a general roving commission to consider and advise the appointment of committees to report upon any matters which they deem to concern women in any degree. Lady Emmott is the chairman, but there are a number of experienced Labour women among the members: Miss Susan Lawrence, Dr. Marion Phillips, Miss Harris (of the Women's Co-operative Guild) and Mrs. Pember Reeves. I see that they are making a special inquiry into the conditions of domestic service, and for the first time in history, so far as I am aware, they are actually looking at it from the point of view of women who cannot afford servants as well as those who can. One of the committees is dealing with the subject of home help for any woman who needs it, and the implication is that it is well for the nation that the woman in the home should not be continuously overworked but be able to have assistance in her domestic duties. This is a new and very human point of view, and if plans to provide the help are not only made but carried out, the Labour Party's intention of shortening the hours of work for all workers will be on the road to accomplishment.

INDUSTRIAL VALUE OF WOMEN.

It is impossible directly to answer the question whether the services of the average woman in industry is worth two-thirds of the services of the average man, but it is interesting to note that the proportion of about one-half which operated in 1914, and which had grown up naturally without outside interference, persisted over a very long period and in many countries. Speculation on the reason for this 50 per cent. wage is, however,, bound to be of a somewhat academic nature and need not detain us here. What is more important is to consider if the present 66 per cent. represents a fair proportion under modern conditions. In other words, is the average woman in industry now overpaid or underpaid as compared with the average man. In view of the work which women have done during the war it is a somewhat ungracious task to consider the deficiencies of women as compared with men from an industrial point of view, but no ultimate advantage can come either to industry or to the women themselves by failing to take note of the facts of the situation. In connection with the preparation of a report, recently issued, a large amount of data was collected, and a large number of employers were examined bearing on the question of the efficiency of their female employees from an industrial point of view, and throughout it was found that women were worse time-keepers than men. For instance, a large firm reporting through the Engineering and National Employers' Federation stated that women's lost time was 7.1 per cent. as compared with 3.4 per cent. for men. The Tramways and Light Railways Association, and other bodies concerned with the same class of service, stated that one of the defects of the women was "unreliability in reporting for work." In the case of the Post Office the difference between male and female wages was justified among other reasons by the women's additional sick leave. Other quotations could be made, but it is unnecessary to multiply instances.

There are, of course, physiological reasons for expecting that women would be worse time-keepers than men, and unquestionably in many cases domestic ties affecting women only, or mainly, also work in the same direction. In a sense these things may be "unfair" from a woman's point of view, but they exist, and from an economic point of view must be allowed for. The effect of this inferior time-keeping is to decrease the value of women in industry, or relatively to increase the cost of employing them, which is the same thing.

A further matter relatively increasing the cost of female labour from the employers' point of view, is that it involves increased expenditure on supervision and welfare, while in men's factories the introduction of women involves the provision of separate cloakroom and other accommodation, with attendant charges. This latter item may be of importance in the engineering trades, from many branches of which women were in the past entirely absent. Apart from questions of time-keeping, or extraneous charges, the matter of the employment of women is closely bond up with their relative industrial ability as compared with men. This naturally varies with the industry concerned and the type of work. In some of the textile trades women are practically equal to men, although in weaving—peculiarly a woman's trade—the women usually make less maney than the men because they cannot keep so many looms running.

PREMIER'S PROMISE TO WOMEN WORKERS.

NO RESTRICTIONS AGAINST THEM IN ANY OF THE NEW MANUFACTURING INDUSTRIES.

EQUAL PAY FOR EQUAL OUTPUT.

A striking memorial on the position of women in the various manufacturing industries has been presented to Mr. Lloyd George by Lady Rhondda, on behalf of the Women's Industrial League. Even in new industries they complain of attempts at exclusion, and they ask for the removal of all restrictions.

The "equal pay for equal work" stipulation, they state, has often been wrongly interpreted as meaning that a woman should receive the same money for a day's work as a man, even though her output was less. When women ask for "equal pay for equal work" they mean "equal pay for equal output."

MR. LLOYD GEORGE'S REPLY TO THE MEMORIAL.

The Premier replied on the same day the memorial was received. He wrote:—

Dear Lady Rhondda,

You refer to the Treasury agreement made in 1915 which enabled women to enter almost every department of industry, and so assist the nation in its dire extremity. It is my intention, if I am returned to power, to carry out that agreement in such a way that the unions shall have no cause for complaint, but when the terms of that agreement have been fully satisfied, women will find ample scope for their activities in industry when the pursuits of peace are fully resumed.

The Government has never agreed that new industries come under the Treasury agreement. If the restrictive clauses of that agreement are seriously believed to be of any benefit to trade unions or any other class in the community, then to bring new industries under them would be to endow those classes whom such restrictions benefit with the fruit of the sacrifices of the war, a form of profiteering which nobody that claims respect and deserves responsibility would willingly touch.

These new industries are already extensive, and many will arise in the near future to ensure that our country is more self-supporting than it has ever been in the past, and it will be my care to see that in all these industries no discriminations shall be made against the employment of women in any suitable occupation.

In this way and in those industrial occupations in which women were engaged before the war opportunities of every sort will be opened up for every class of women worker, and I believe that the real working representatives of organised labour may be trusted when the time comes to see the necessity of utilising, in the interests of production, and to the best advantage, every class of worker available.

The memorial refers not without substance to the opposition that women have had to meet. It is not credible that the trade union leaders who were parties to the agreement went back on it; but leaders cannot always control their followers, and followers sometimes try to become leaders by repudiating the prudent bargains that their leaders have made.

In regard to the payment of women workers, I am a supporter of the princciple of equal pay for equal output. To permit women to be the catspaw for reducing the level of wages is unthinkable. It is not desired by enlightened employers, to whom good production and uniform wages are desirable; cutting of wages, with its consequent instability, is not at any time either in their interest or in that of the nation.

It is scarcely fair to say that women are not being consulted on important questions of reconstruction. More in this direction might be done and shall be done, but they are already represented on the Women's Employment Committee of the Ministry of Reconstruction, the report of which body will shortly be issued, and will help us to visualise more clearly the possibilities of profitable employment of women in every branch of industry.

I am in full sympathy with the claims you make for more effective representation on committees, in view not only of the sacrifices that women have made in the last four years, but of the capacity they have shown in industry and in dealing with the country's affairs.

Your memorial raises the question of training and educational facilities, and to this I can unhesitatingly reply that steps shall be taken to ensure for women the opportunities that they seek in our schools and universities to fit them for the trades and professions in which they can suitably engage.—Yours sincerely,

(Signed) D. LLOYD GEORGE.

WOMEN'S POST-WAR JOBS.

MACHINES THAT WILL HELP THEM WITH HEAVY WORK.

In spite of the fact that the armistice has thrown many women out of work, the view is strongly held in several quarters that women's work is going to play a big part in the industrial life of the future.

"In the old days," said a woman worker to a "Daily Chronicle" representative, "our sphere of usefulness, outside our own homes, was almost entirely confined to the schoolroom, the typewriter, and other people's kitchen and nurseries. The war has changed all that. Women have shown that there are few things they cannot do, from filling up forms and doing heavy work in a factory, down to dock labouring. Women will be able to take a share in the work of the future without laying themselves open to the charge of keeping the men out of jobs."

Many employers are hoping still to have the co-operation of women workers, and efforts are being made to adapt industry more and more to women's physical powers. The whole trend of modern invention is in the direction of producing labour-saving machinery which cuts out the need for brawn and muscle as well as speeds up production.

Many new machines are being designed with a special view to the capabilities of women. One of them practically does away with the need for lifting. If a heavy article needs moving from one place to another it is simply lowered on to the platform of the machine which is then wheeled away, and by means of a mechanical contrivance, the platform is automatically raised to any height required.

LOANS FOR WOMEN.

To meet the difficulties attending adequate training for the employment of women, the Central Bureau inaugurated a loan fund.

Under the provisions of this fund a woman who desires to be trained for any particular occupation can obtain a loan for the purpose.

Lady Londonderry presided yesterday at a meeting of that fund, and Miss Agnes Hitchcock, Chairman of the Loan Fund Committee, said that practically all the loans advanced had been repaid.

WOMAN'S INDUSTRIAL CHARTER.

EQUAL PAY FOR EQUAL WORK.

IMPORTANT OFFICIAL REPORT.

(By Our Labour Correspondent.)

The report of the War Cabinet Committee on Women in Industry is published to-day (Cd.135, 1s. 6d. net). It is a fairly substantial volume of 350 pages, packed with historical, statistical, and documentary information on the industrial employment of women and girls, with special reference to the relation between the wages of women and men.

The Committee, after a careful consideration of the question of "equal pay for equal work," recommend:—

That, on systems of payment by results, equal payment should be made to women as to men for an equal amount of the same or similar work done.

That the relative value of the work done by women and men on time on the same or similar jobs should be agreed between employers and trade unions acting through the recognized channels of negotiation.

That where the employer maintains that a woman's work produces less than a man's the burden of proof should rest on the employer.

That the employment of women in commercial and clerical occupations especially requires regulation in accordance with the principle of "equal pay for equal work."

That the Government should support the application of the principle to industry by applying it with the least possible delay to their own establishments.

Other recommendations with regard to the future employment of women include the following:—

That employers and trade unions should make possible the introduction of women in occupations shown by war experience to be suitable by agreements which would protect the interests of the men workers along the lines of the recommendations already indicated.

That the Factory and Workshops Acts should be reformed and extended in various specified directions (including the reduction of working hours) for the protection of the health of women workers.

That the present factory medical inspectorate should be strengthened by the appointment of women medical inspectors and a considerable increase in the number of lay women inspectors.

That a local factory medical staff should be established whose duties should be co-ordinated with those of the existing local medical authorities.

MINIMUM WAGES.

The Committee also make the following further recommendations on minimum wages for women and girls:—

That, in order to secure and maintain physical health and efficiency, no normal woman should be employed for less than a reasonable subsistence wage.

That this wage should be sufficient to provide a single woman over 18 in a typical district where the cost of housing is low with an adequate dietary, lodging (to include fuel and light) in a respectable house, clothing sufficient for warmth, cleanliness, and decent appearance, money for fares, insurance, and trade union subscriptions, and a reasonable sum for holidays, amusements, &c.

That there should be additions to this wage for women working in the larger towns and in London to cover the cost of living there.

That the wage should be adjusted periodically to meet variation in the cost of living.

That the basic subsistence wage should be fixed, and the variations determined, by a specially constituted authority.

That the subsistence wage should apply to employment in all occupations (other than domestic service) for which a minimum wage has not been established by an Industrial Council or Trade Board.

That a scale of wages should be established for girls 2s. a week less than the women's subsistence wage for each year under 18.

On the question of mothers' pensions and maternity allowances, the Committee recommend:—

That the Government should give consideration to the question of adopting a scheme of mothers' pensions for widows and for deserted wives with children, and for the wives with children of men physically or mentally disabled, such pensions to be granted only after investigation where there is need and subject to supervision, and otherwise to be administered on the lines followed for pensions granted to the widows of men deceased in war.

That the Department or Departments of Government concerned should draw up for the consideration of the Government a scheme by which the entire direct costs involved by the lying-in of women under thoroughly satisfactory conditions should be provided by the State.

A further recommendation may be quoted:—

That the Government should continue to give the strongest possible support to proposals for the international regulation of labour conditions, which should lessen the danger of the foreign trade of this country being injured as a result of the employment of underpaid labour abroad.

COMPOSITION OF THE COMMITTEE.

The Committee which is responsible for this "Woman's Industrial Charter" was set up by the War Cabinet in September, 1918 when the question of "equal pay for equal work" had been raised in an acute form by the strike of the London omnibus workers to enforce the claim of the women conductors to the same war-wage advance as the men had received. In view of the important issues of the maintenance of the war output, and of the future welfare of women workers and the progress of industry Mr. (now Lord) Justice Atkin was appointed Chairman of a Committee of Inquiry composed of Miss Janet Campbell, M.D., Sir Lynden Macassey, Sir William Mackenzie, Sir Matthew Nathan, and Mrs. Sidney Webb. The main Report, embodying the above recommendations, is signed by the Chairman and all the members except Mrs. Sidney Webb.

Sir William Mackenzie, in a note appended to the Report, dissents from the recommendations in favour of a subsistence wage for women and mothers' pensions. He contends that the minimum wage should be fixed trade by trade, instead of having one national minimum for all trades, and that the proper procedure is to extend and develop the existing machinery of Whitley Councils and trade boards for determining wages. As to mothers' pensions, he agrees that widows and wives with children in necessitous circumstances should be maintained at the public expense, but he suggests that the subject is somewhat removed from the scope of the Committees inquiry.

MRS. WEBB'S MINORITY REPORT.

Mrs. Sidney Webb's minority report, which occupies 80 pages of the volume, is a characteristic argument for "the opening of all posts and vocations to any individuals who are qualified for the work, irrespective of sex, creed, or race; and the insistence, as minima, on the same qualifications, the same conditions of employment, and the same occupational rates for all those accepted by the private or public employers as fit to be engaged in any particular pursuit." The popular formula of "equal pay for equal work," says Mrs. Webb, is ambiguous and easily evaded. What is needed is a system of occupational or standard rates enforceable on a whole grade or vocation, and "there is no more reason for such occupational or standard rates being made to differ according to the workers' sex than according to their race, creed, height, or weight." There should be a "national minimum" prescribed by law and devoid of sex inequality.

About 35 pages of the Report consist of a memorandum by Miss Janet Campbell on the health of women in industry. The inherent physiological differences between the man and the woman which handicap the woman in competition with the man are briefly discussed. The general conditions under which women have been employed before and during the war are reviewed and some of the effects of these conditions on the health of the woman worker and on the function of maternity are analysed.

It is impossible within any reasonable space to do justice to the Report as a compendium of facts and inferences on many aspects of the industrial life of women. It collates a body of useful information about women's employment and women's wages before and during the war in all the chief occupations where women are found, and brings together some illuminating views on the relative efficiency of the man and woman worker. Though it contains statistics in abundance, the Report is full of human interest and is a valuable contribution to the study of one of the most important problems of modern industry.

The Employment of Women.

702.

II.

By John Murray, M.P.

There are at this moment, or there were very recently, towards 18,000 unemployed women on the "live register" of the Employment Exchanges on Tyneside. Some of the 18,000 may be women, whose duties and opportunities properly lie in their own homes. But many women who would cannot live at home in idleness. And many who might will not, because they desire to be independent. The need and the ambition alike deserve respect; and the two classes of women together run into many thousands.

Consider what an eye-opening excursion into industry these thousands have made. They are now familiar with the advantages of standard rates and conditions, of training and specific status. They have become critical of the current distinctions between men's and women's work. It was part of their handicap in the past to be classed as incurably unskilled and not worth training. This prejudice, neutralised temporarily during the war, is now hardening against them again. Is it surprising if they prefer industry to domestic service and fight for a better foothold in the one and better conditions in the other?

In the latter a deadlock exists between half-industrialised maids and mistresses who do not readily think of themselves as employers or of their maids as having industrial rights. Both sides, roughly speaking, are unorganised. Low cash wages are offered, partly because the cost of keep is high.

Rigid Conditions.

The National Federation of Women Workers demands a relatively high minimum rate, and very rigid conditions of time off. Now, women's work, they say, is never done. Except in very large houses, or in hotels, domestic service is not really very susceptible of "industrialisation." The only chance for a rigid rule is to include very little. It is elasticity and goodwill that are needed.

The parties appear to be poles apart; at any rate a good many shillings and times off a week separate them. There is no machinery for bringing them together. Why should not the husbands mediate? They are more used to employing than their wives, and their own comfort is at stake. A concordat on domestic service would react at once, and very favourably, on the female labour market. If the husbands did no more than organise their wives, compromise would be easier. And if training facilities were set up, the improved status of domestic service would be to the advantage of both sides in future.

Two Needs.

In industry the needs are two, new work for women and a better sharing of existing work between the sexes. The first must come slowly and piecemeal. Government could help, perhaps, towards the cost of training the labour, but, if it did, it would no doubt impose very strict conditions. The second is for the future. Too many male breadwinners are now out of work to permit of demarcations being carried out. But presently more room will have to be found for women, not by "infiltration" into any or every sort of work on the principle of "equal pay for equal work," but by demarcation of spheres in the necessary detail. Just as before the war, women are pressing now for more pay and a wider entrée. The war has destroyed a million men and thrown hosts of women on their own resources. There is work being done by women that men ought to do, and conversely. Demarcation will rectify this, "infiltration" never. Fair demarcation rests on the principle of the division of labour, assigning similar work to uniform groups, not mixing ages and sexes. The division of labour, fairly carried out, ensures productivity and harmony. In most communities and in industries fresh demarcations of work by the sexes are needed.

Industrial economics are being treated by Commissions of Inquiry with little regard to the practices prevailing before the war, and it is not surprising to find that the War Cabinet's Committee on the future industrial position of women should have issued a report, published to-day, which makes a considerable breach with the past. Women have long demanded that their remuneration should be determined in accordance with the principle of "equal pay for equal work." This was one of the questions referred to the Committee for examination, and the finding is strongly in favour of acceptance of the claim. But it is interesting to note that the Committee, with better logic than some advocates of the principle show, define it as meaning payment in proportion to efficiency of work. That is not always the way the principle is treated. Often it is converted into the simple dogma of the same rate of pay for men and women doing the same kind of work, irrespective of quality, amount, or efficiency of output. The Committee's test is stricter, if more difficult of application. When the work is factory labour and payment is by piece-rates, it may be relatively easy to adopt the general rule of equal pay in proportion to efficiency of output. But time rates of pay introduce a more difficult calculation. The relative value of work done by women and by men in such circumstances must, the Committee think, be a matter of adjustment between employers and Trade Unions acting through the usual channels. The problem assumes a still more complex appearance when we approach the professions and clerical and business occupations. Who, for example, is to assess the relative value of the work done by men and by women in the teaching profession? The Committee's logical development of the doctrine of "equal pay for equal work" must fail here; if the principle is accepted at all, it looks as if it must be on the basis of the same pay for the same kind of work, without regard to exact measurements of the efficiency ratio. Indeed, excellent as the Committee's definition is in theory, it seems just one of those principles which cannot be adequately realised in practice. Except in a few simple cases efficiency rates cannot be measured either qualitatively or quantitatively. It is so now between man and man, and it will be so between men and women, in spite of the Committee's attempt to give scientific exactness to the principle of "equal pay." As a corollary to the equality which they seek to establish, the Committee recommend that the separate grades and separate examinations for women clerks in the Civil Service should be abolished, but that Government Departments should retain within their own discretion the proportion of women to be employed in any branch or grade. Here women may see the reverse side of the medal. If they are to be paid the same rates as men for the same kind of work, they must expect to meet far keener rivalry than they have hitherto had to contend with. The relative cheapness of their labour in the past has assisted them in competition with male labour. With that advantage removed, they will have a harder fight to keep their place in the industrial market.

Only indirectly do the Committee refer to the disparity in financial responsibilities between men and women, which used to be regarded as a decisive argument for differential rates of pay. But although the reference is oblique it is important, since the conclusion is in favour of the payment to married men of children's allowances. The adoption of this recommendation would mean an enormous breach with economic tradition, and by its nature would help the propaganda of those Socialist advocates who urge that the children of the nation should be a charge upon the public funds. The recommendation of the Committee is valuable only in so far as it recognises that the doctrine of equal pay is in certain circumstances unfair, and may be unworkable; it is an admission that the theory may not square with the very basis of our civilisation—family life, and the responsibility of the father for the support of the family. In other respects also the report makes recommendations which are revolutionary in character. The theory of a minimum wage has been already supported by the joint Committee of the Industrial Conference, and has been provisionally approved by the Government. But the present Committee, in advancing the same claim, treat it in a different way. It is understood that the Government's intention is not to have a universal minimum, but a minimum graduated according to the capacity of individual industries. The Committee's minimum is to be a subsistence minimum, apparently regardless of the financial circumstances of individual industries. According to their definition, it should be sufficient "to provide a single "woman over 18 years of age in a typical "district where the cost of living is low with "an adequate dietary, with lodging to include "fuel and light in a respectable house not "more than half-an-hour's journey, including "tram and train, from the place of work, with "clothing sufficient for warmth, cleanliness, "and decent appearance, with money for "fares, insurance, and Trade Union subscrip-"tions, and with a reasonable sum for holi-"days, amusements, &c." All this is set out as if it were a sum in arithmetic, and all that was necessary to do to arrive at the subsistence minimum was to add up the items. But first of all they have to be valued, and probably no two individuals would give the same valuation to each item. What a prudent person finds adequate a spendthrift regards as little more than beggary. There are many serious difficulties in estimating a subsistence wage in terms of personal expenditure which varies with the individual. Among other recommendations of the Committee are a proposal for State pensions to widows, deserted wives, and the wives of men physically or mentally disabled where they have children dependent upon them and are in need, and a further suggestion that the State should undertake the entire direct costs "involved by the lying-in of "women under thoroughly satisfactory condi-"tions." These proposals, like the scheme of wage allowances in respect of children, are thoroughly Socialistic in their tendency, and indicate with alarming clearness the drift of advanced opinion towards the substitution of State for private responsibility in family life.

Times 3.6.19

PRE-WAR TRADE PRACTICES.

The Bill agreed to between the Government, employers, and trade unions for the restoration of pre-war "trade practices" was submitted for second reading by SIR R. HORNE, Minister of Labour. Sir Robert said that the House must not be under the apprehension that the passing of the measure would involve any reversion to customs which limited production. The need of increased output was recognized by both employers and employed.

MR. CLYNES also spoke strongly on that point. He urged the vital need, in the interest of the community, of increasing the volume and value of production by the joint energies of [illegible]ers and employed. Working men would suffer doubly from any deliberate diminution of output—in diminished earnings and a [illegible] in the purchasing power of those earnings. "Dearness," said he, "is inseparable from scarcity."

WOMEN WORKERS.

The position of women workers under the Bill was raised by MAJOR WOOD. Hs said that of the 790,000 women employed in establishments affected by the Bill in July, 1918, only 450,000 were directly replacing men; and he argued, therefore, that the Bill would put a bar upon 340,000 women who were not in competition with men. In reply, SIR R. HORNE stated that the Bill did not exclude any woman from any position which she filled before the war, nor did it stereotype anything for all time.

MR. SEDDON recognized that the Bill carried out the pledges given by the Government to restore trade union customs after the war, but hoped it would be a dead letter before very long. Other members were also of opinion that the Bill was not quite fair to women, having regard to the services they rendered during the war, and insisted that amendments must be made to secure their position in industry.

The Bill was read a second time.

The Lords' amendment to the Ministry of Health Bill reducing the number of Parliamentary Under-Secretaries from two to one was agreed to on the motion of MR. BONAR LAW.

The Government War Obligations Bill was read a second time.

The House was counted out shortly after 8 o'clock.

702a/6

Electrical Review 30.5.19

The Westinghouse Mass Meeting.—At the Free Trade Hall, Manchester, on the evening of May 19th, between 3,000 and 4,000 Westinghouse workers of all grades foregathered on common ground with the management and directors, first and foremost to discuss problems of mutual interest and create and absorb a better feeling of confidence, and secondly, to enjoy a musical programme of Westinghouse talent throughout. The meeting was an unqualified success. Capt. H. S. Hilton, managing director of the company, presided, and in his opening remarks pointed out that such a function was the first of its kind in the country. The meeting was an outcome of a suggestion by the Works Committee, and there had been a most gratifying response. It was hoped that it would become an annual function.

Mr. J. Annan Bryce, chairman of the company, spoke of the setting-up of works committees as a sign of the recognition of that human relationship between employers and employed which was going to be the only source of happiness for the country. The experience of the company showed that there was a real desire on the part of the workers to co-operate through the Committee in endeavouring to remove grievances, in assisting in necessary disciplinary measures, in settling holidays and the arrangement of holiday work, and in finding out how men's individual capacities could be best employed. Mr. Bryce put increased production per man as the only means of overcoming the difficulties British industry had now to face—heavy taxation and a handicapped export trade. He described as a fallacy the old idea that there was only a certain amount of work to go round, and that if a man did more he would deprive others of work. The real effect, he said, was that the more a man did the more work there was for other people, the cheaper the article he produced became, and the greater was the demand for it. The argument that because an article was sold cheaper the employer would want to pay less wages was equally wrong, for if the employer could sell more he could afford to pay more. The worker was entitled to higher wages and to shorter hours, and to opportunity for recreation and enjoyment. If he would produce more, and would welcome the adoption of every kind of improved method of machine production, it would be possible not only to pay him more, but to raise his standard of life.

Mr. S. Ratcliffe, chairman of the Works Committee, urged the need for frequent meetings between the workers and the management, where the problems of the industry could be discussed. Those at the head of the Labour movement had considerable difficulty in asking for the loyalty of their members in securing increased production, because that had so often meant just before the war that factories had been choked with goods, and men had been unemployed because they had made too many goods. If that fear could be overcome, and the worker could be sure that his interests were safeguarded, they would get the increased production which was so necessary for the repair of the waste of war.

Mr. W. Rostron, chairman of the Staff Committee, held that in studying the profit and loss account the human element should be taken into consideration as well as the material. Miss Wilson, Women's Welfare Superintendent, voiced the women's point of view. She remarked upon the necessity of every job being "manned" by the proper person: if strength was required, by the man; if it was work which could be done more efficiently by women, then women should do it. Mr. Mensforth, general works manager, remarked that it was an excellent thing to eliminate the differences and get together first the points of agreement.

Capt. Hilton announced that the original allotment of £100,000 worth of shares to be taken up by workers of the company had been over-subscribed. After a musical programme of 10 items had been gone through very satisfactorily, Col. Cradock, director of the company, moved a vote of thanks to the artistes, and the meeting closed.

7/6/19

We have before us the Report of the Committee on Women in Industry. The report itself deals mainly with the evidence collected as it has affected the rise in wages during the progress of the War. The primary cause of the rise in wages has, of course, been the calling up from productive to destructive employment of the major portion of the able-bodied men in the belligerent countries. But there can be no reasonable doubt that the extravagance of the Ministry of Munitions in its haste to supply shells and other requisites for carrying on the War did contribute, and contribute powerfully, to the difficulties in which we now find ourselves. The question, however, of the employment of women in industry, looked at from its broad national aspect has a far wider range than its effect upon the rate of wages. If the object aimed at by society were that everybody, to use common language, should have as much money as possible, it would be desirable that everybody capable of working should work to their utmost capacity and that families should be kept down well within the means of economic subsistence within a given standard.

It is evident, however, with our present economic development, that such a policy would so materially reduce the population that it would be impossible not merely to defend the British Empire, but even to defend England itself. Consequently, the primary policy must be to maintain the race as distinct from getting as much work as possible out of every member of the community. It follows, therefore, that that race will survive which maintains itself in such a state of efficiency that it is able to defend itself from aggression, and to maintain its economic equilibrium. If that be admitted, it is evident that the business of the vast majority of women in the generations to come, as in the generations that are past, will be domestic, or in the home, as we commonly express it, rather than working at high pressure in munition factories or, for that matter, in any other branch of industry.

At the moment it will not be desirable to press that argument too far, because there is an excess of marriageable women over men in these islands estimated at between 2½ and 3 millions. Consequently, it follows that a large proportion of the women of the country will be dependent upon their own exertions for their maintenance, as the killed alone in the late War amounted to very nearly 700,000; and, in addition, there are something like a million of men who have been discharged from the Army in a state of health and physical well-being below the standard which they enjoyed when they were first called to the Colours. Many of these men, no doubt, are young; and it is to be hoped that after a period in civil life their health will be more or less restored. But it is evident both to our common sense and to our knowledge and observation amongst our friends and acquaintances that there is a very large proportion of men who are hardly likely ever to be in a position to maintain a wife and family. Consequently, openings for female labour will be required during the present generation upon a somewhat abnormal scale. At the same time, it is desirable to bear in mind the importance of the national policy of restoring to civil employment the men recently with the Colours, and giving facilities to those whose health and inclinations admit of it to marry and settle down to domestic life.

WOMEN IN INDUSTRY

To the Editor of THE NEW STATESMAN.

SIR,—In your interesting article on the Restoration of Pre-War Practices Bill last week you pointed out that the Bill is not likely to be put into practice, but that it is in the nature of a guarantee to Labour, that the subsequent negotiations undertaken in each individual trade will result in a position at least no worse for the workmen concerned than would be obtained under the enforcing of the Act. You assumed that the position of women would be safeguarded in these negotiations and that they would have nothing to complain of in the future. I do not know upon what your assumption was based and I should like to call your attention to one or two reasons why the opposite seems probable.

In the subsequent negotiations the only manner in which the interests of women will be represented will be through the power of the semi-skilled Unions, and in the semi-skilled Unions women are not by any means the first to be considered. Trade Union organisation among women is, as you know, a difficult business, and industrial women have not as yet reached the position in which their interests find adequate voice either in separate Unions or in mixed Unions with men. Moreover, the predominant factors in the bargainings that will follow the passing of the Act must be the skilled men's Unions, and from these women are still rigidly excluded, so that their position when the bargaining comes will be that one party to the bargain will have nothing to say to them and the other party will have their interests last on the list of things which it must protect. If industrial women feel safe in this position it is surely only another instance of the trusting and "feminine" characteristics which have given women the worst of all bargains during the centuries.

The Government is, of course, bound to fulfil its pledges to the skilled men. But surely also the Government is bound to look after the women workers of this country, the more because they are not yet sufficiently highly organised to look after themselves. It may be impossible at this present juncture to introduce safeguards about the position of women into the Pre-War Practices Bill, but it is surely not impossible to hope that in the near future another Bill opening all trades as well as all professions to women may be placed upon the Statute Book. Until this is done it will be a legitimate grievance that professional women have freedom of occupation and industrial women have not, and it will be an inevitable source of weakness to this country that the skill and ability of its women workers is not allowed free play, and that they are crowded back ruthlessly and remorselessly into pre-war sweated trades.—Yours, etc.,

RAY STRACHEY.

702. A

WOMEN IN INDUSTRY

Interest that rarely attaches to a Blue Book is found in that which deals with the comparative efficiency of men and women in what before the war was regarded as men's work. Inquiries were addressed by the Committee on Women in Industry to ninety tramway companies, who employ in all 14,584 women, of whom 11,670 were conductors. The general effect is that there were far more complaints of rudeness against women than against men; they were less punctual, lost time, and trams ran much worse than before; they were "more severe on their uniforms," and the bill for repairs increased considerably, "owing to the women neglecting to attend to the trolleys at points and curves." The shortage of cash increased 50 per cent. with women, besides money lost through their not looking for excess fares. The query "Do women carry out their duties as efficiently as men?" was answered "yes" by nine companies, and "no" by 73. "Do the collect fares as efficiently?" met with the answer "no" from 21 managers, and from 60 "yes." Seventy-two companies reported greater shortage in cash, and ten none. Thirty-four companies found women as courteous as men, and forty-seven less courteous. Punctuality was bad on 68 lines, and good on 15. Employment of women entailed greater expense to eleven companies, but twelve said "no." One typical manager said. "While I willingly acknowledge the great help they gave—and we could not have carried on without them—I regret I cannot find one point in which they were superior to men." But then this manager was a man, yet he is awfully non-committal—"not superior to men."

In clerical work, however, women hold their place whether in business establishments, on railways, or the Government service. The deficencies that there are generally are traceable to insufficient training in a number of women clerks, and as they progress this deficiency disappears. Women, however, make bad superintendents over a section of clerks, and the women clerks do their work much more efficiently when under the supervision of man. Women clerks with equal training do the same work as men and just as efficiently, but owing to many of them not having sufficient preliminary training and when not under male supervision "it takes three women to do the work of two men." This ratio is reduced, however, as further practise improves their training. The Post Office Department is opposed to equal pay for women. The Secretary of the Post Office, Mr. Murray, gave evidence that if the women clerks at present employed were given the equivalent of the men's scale it would cost over a million a year. His experience was that where men and women discharge similar or identical duties (1) the women's work is not equal to the men's; (2) her sick leave is greater, (3) her service as a rule is shorter. The railway managers find that women are bad ticket collectors, as they take longer to examine the tickets, and again the view was expressed, as in clerical work, that in manual work on the railways it takes "three women to do two men's work." The similarity of expression is curious.

Yet women are described as excellent at manual work in industrial and business houses. They have shown themselves fit for heavy employment. They have shown unexpected powers at lifting heavy weights. They are not unduly liable to heart strain or other strain. They stand high temperature in factories and bad weather, and in occupations that require long standing just as well as men. But women have shown themselves more deft than man in the lighter jobs. They are quicker at the work and do things more handily and much more daintily than men. Some of the managers say that this may be due to the fact that men generally get more of the heavier work of lifting loads than women, and that the majority of the women on the lighter jobs have developed greater alertness than the men, who have been employed at the heavier work, and consequently "go about their tasks in a more lumbering way than women do." Many heads of industrial firms and a number of doctors—medical men as well as medical women—agree in summing up the position in this way: "Women should be left free in their competition with men. Employers would probably select men for the heavier jobs and women for the lighter ones, on which they appear to be more deft than men.

THE PROBLEM OF A MINIMUM WAGE BASIS.

Some account of the valuable report on "Women in Industry," by the War Cabinet Committee, has already appeared in the "Manchester Guardian." It is proposed here to devote some space to the examination of its bearing on an immediate question of practical politics. Proposals for a national minimum wage have been before the public for some years, and have been held up largely owing to the difficulty of deciding on a minimum basis for women. There are in this Blue-book two reports—that of the majority and that of Mrs. Sidney Webb—both referring to this question.

Mrs. Webb holds that there should be a "legal minimum of weekly wages for the whole kingdom, based on the price of full subsistence, below which no adult worker free from specific disqualification should be permitted to be employed. These legal minimum conditions of employment and unemployment should be identical for men and women." We naturally ask on reading this whether full subsistence means that of the individual worker or of a family. The answer is not given quite directly, but in the next paragraph we are told that wages must not be proportionate to family obligations, and that the "question of public provision for maternity and childhood urgently requires investigation by a separate committee or commission." The direct effect of this recommendation is to hang up the whole question of the minimum wage—at least so far as it affects men—pending the report of yet another Commission, which may mean for an indefinite time. The indirect effect or real meaning appears to be that the national minimum should be based on the needs of the individual worker, and not on those of a family. Wife and children, it would seem, are to be maintained by the State, so that men, not being called upon to support them, may have a claim to higher wages than women.

Whatever the rights or wrongs of the endowment of motherhood, it evidently stirs the deepest sources of controversy. It opens up the whole question of the relation of the State to marriage, parenthood, and the conduct of family life. It is not likely to be settled in a short time, and it will divide opinion on quite different lines from those on which ordinary economic differences run. The practical effect, therefore, of Mrs. Webb's proposal would be that the national minimum wage, if fixed at all, would be fixed at an amount deemed necessary for the support of a woman. There is probably no regular occupation in which men do not already earn as much as this, and the effect would be to establish a minimum by which men would not benefit in the least. This is not to say that the proposal is altogether useless. The majority also propose that there should be a national minimum for women based on the cost of adequate maintenance for a single woman. But their proposal is not encumbered with any requirement as to the minimum for men. They do not object to men getting more, provided that no woman gets less.

The Sex Factor.

Mrs. Webb would probably reply that neither would she object to the individual man getting more, but that she declines to prescribe that he shall have more. Her contention is that sex is wholly irrelevant to payment. In addition to the national minimum, she advocates occupational or standard rates for all persons of like industrial grade, and lays down that "there is no more reason for such rates being made to differ according to the workers' sex than according to their race, creed, height, or weight." In that she ignores evidence which elsewhere she herself admits—viz, the "unfortunate tendency of girls" to regard their employment as a temporary phase, to be given up on marriage This is a purely sex factor which undoubtedly influences the employer in deciding whether a girl or a youth is of the more value to him; and there are other differences which are essentially differences of sex.

Since these differences exist, the dilemma that faces any authority which has to prescribe minimum rates is this: If it takes rates which employers are willing to pay to men and says that no women are to be employed for less, it will probably cut a good many women out of employment. If it takes rates which will leave employers willing to employ women it will do nothing for the man.

To this Mrs. Webb's reply appears to be that the elimination of the less efficient worker is a positive gain to industry. If (for the sake of argument) two men can do the work of three women there is "sheer national loss in bribing the employer by permitting him to pay lower wages" so long as more efficient workers are available. But what is to happen when the more efficient workers are absorbed? There is still a fringe of the less efficient available. On what precise principle are they to be debarred from earning what they can? The mere fact that someone else can do the work better is no reason if that someone else is already employed. What does seem reasonable is that the less skilled should not be allowed to undercut the more skilled. Now if two persons of grade A can do as much as three of grade B this is as much as to say that a B is only worth two-thirds of an A. If, then, A is paid a shilling an hour and B eightpence the result is indifferent to his employer. There is no question of bribing him to employ B, but only of making it indifferent to him which he will choose. If B must receive at least ninepence an hour the advantage is on the side of A, although A's wage is materially higher. But in this case the effect will be that when the employer has exhausted the A grade he will come to the B's, and perhaps at ninepence he will still find work which it pays him to get done at that rate, though it would not pay him if we compelled him to give a shilling for it.

The Difference of Efficiency.

It does not in the least follow that this tends to industrial inefficiency. On the contrary, since willing workers are willingly employed, it presumably adds to the total output. Nor does the less skilled labour undercut the more skilled, because, though its wage is less, it costs the employer more per unit of product. Undercutting arises not from any inequality of payment, but only from an undue inequality, an inequality so great as to over-balance the difference of efficiency.

It follows that any authority that fixes minimum time rates is within its rights in considering either sex or age, or any other differentia which is found normally to affect efficiency. It should by no means allow such differences as will enable the less efficient class to undercut the more efficient. But it does not follow that it is bound to insist on a uniformity which might cut the less efficient out of employment altogether. There is evidence in this report that that is a not unknown method among men of getting rid of women's competition, but it is itself a kind of undercutting—only an undercutting of the weak by the strong. It is possible to be too much enamoured of efficiency. The State cannot bind itself to a single uniform minimum rate, but must give itself freedom to take the productivity of workers of different categories into account, whether the differences be due to sex, age, or any other circumstances.

Leicester Post 27. 6. '19 -

WOMEN IN INDUSTRY.

For better or for worse, women in increased degree have as the result of the war, entered on industrial occupations, and a variety of problems arising out of that development were discussed at yesterday's Conference of Women Workers in Leicester. First and foremost among these is the right women claim to stay in industry, which they see endangered by actual discharges and by the Pre-War Practices Bill. This Bill, which has been a source of grave anxiety to the Government, is one to redeem pledges made to the Trade Unions when they consented, under stress of war's necessity, to waive customs and conditions established by years of collective effort. The unions frankly admit that some of those conditions and practices are undesirable or, at least, unsuited to the new times on which we have entered, but they demand that what shall be surrendered or modified must be a matter of after consideration and of voluntary concession after those pledges have been redeemed to the full by the Bill's actual passage into law.

Incidental to the position which the Unions thus take up arises much of the compulsory unemployment of women, which is regarded as a hardship by them. Thus with regard to new processes and actual new industries, they claim the right to remain in them, while averring all the time that they do not wish to trespass on the men's reserve in the heavy skilled trades, nor to do a single soldier out of his job on his return to civil life. Their contention seems a sound one, and it should not be beyond the wit of man—and woman—to find a reasonable and just solution to the problem, thorny though it is, and the report of the Women's Employment Committee, published this morning, should contribute materially to that end. Women's training courses for crafts, with the cost defrayed from national funds, are recommended, and an important proposal is that all branches of the Civil Service and all grades should be thrown open to women equally with men.

Arising out of the increased employment of women in industry, other problems of national concern arise, affecting the future of the home and of the race. Those who are the strongest advocates of the endowment of motherhood, which was the subject of a paper at yesterday's Conference, recognise that while the end in view is a very admirable one, the remedy suggested is at best but a palliative, with attendant dangers and evils. We want to foster, not weaken, the sense of family independence. It is only right, and it is certainly just, that parents should have substantial relief from taxation according to the number of dependent children; but a general endowment of motherhood may actually accentuate the uneconomic conditions which have brought this proposal to the fore. The industrial ideal should be such a remuneration of the adult male worker that he can maintain his family in comfort, and certainly without any necessity for the wife to go out to work.

To pay the mother to stay at home may operate to perpetuate a low-wage system. We are not against mothers' pensions in certain cases—the widow with a young family, for example, where it is obvious that State provision offers the only way to keep the mother in the home for the care of her children, quite free from the taint of pauperism—but a general scheme for the endowment of motherhood ought not to be embarked on without the matter being surveyed in all its bearings, to ascertain first whether it is necessary, and, if necessary, to erect safeguards against abuses and dangers inherent to it. There is room for much more to be done in the direction of child welfare work, and means should be devised for district nursing organisations to be assisted and extended, so that skilled nursing assistance may be available for every working-class home in time of illness.

Daily News - 30. 6. 19

MISS ELEANOR RATHBONE

(President, National Union of Societies for Equal Citizenship.)

ON

WHAT WOMEN HAVE YET TO FIGHT FOR.

The outlook of the women's movement, like that of the rest of society, is one of hope and expectation, but also of grave anxiety. Politically, the advance made during the war has been almost bewilderingly rapid. Great Britain led the way, but it has been outstripped by countries hitherto regarded as the most backward in Europe so far as women were concerned. The women of Germany and Austria have not only achieved equal franchise rights but a substantial representation in the legislative chamber. Within the last few weeks victories have followed in Holland, Sweden, France, and America. It is true that the women of the United States have still to wait for complete success, but this has become a foregone conclusion.

Economically, the prospect is less cheerful. There seems reason to fear that the long and embittered struggle for political rights to which so many women have given their lives may have to be repeated on the field of industry before they can establish their right not only to a livelihood but to the equality of opportunity which is their goal. In Great Britain the efforts of the Government to carry out Mr. Lloyd George's famous pledge to the trade unions, that "pre-war practices should be restored after the war," seems likely to issue in this: that whereas before the war women were shut out from nearly all the more skilled and better paid trades by trade union action, custom, and prejudice, in the future they are to be shut out by legislative enactment. This to be done at a moment when increased productivity is among the greatest of national needs! It is impossible for women to be content with such a solution, and it is not to the interest of the community that they should be so content.

Socially, not much has yet been accomplished by the vote, but much is confidently expected. The position of the married woman calls for amendment, with respect both to her rights over her children and her right to maintenance for them and for herself. Mothers, who have listened to many sermons from pulpit and Press on the importance of "mothercraft" to the nation, are turning on their mentors with the reminder that bricks cannot be made without straw, and that the craftsman is worthy of his hire.

The changed attitude of those in authority towards women since their enfranchisement has more than justified their persistency in asking for it. But to an increasing extent the minds of women are turning from their own special problems and needs towards those of the community as a whole in which they are realising their citizenship.

ELEANOR F. RATHBONE.

WOMEN'S WORK.

Important Recommendations by Government Committee. Large Extension of Trade Boards.

Every aspect of women's work is considered and dealt with in the report of the Women's Employment Committee, which was issued as a Blue Book yesterday.

Appointed in August, 1916, the committee has had to consider and advise, in the light of the experience gained during the war, upon the opportunities for the employment of women, and the conditions of such employment, in clerical, commercial, agricultural, and industrial occupations after the war. It is advocated that free entrance to the clerical posts in local government service should be accorded to women, and that all clerical posts should be opened to men and women alike. A large extension of Trade Boards is thought to be necessary, and better organisation is recommended in order to secure adequate wages.

A 44-hours' working week is put forward for the consideration of the Government with an annual fortnight's holiday on full pay. Trades should be allowed within statutory limits to settle their own hours, subject to Government sanction, a substantial majority to rule. A new Shop Hours' Act is required to limit the existing excessively long hours and excessively long spells. Government experiments are suggested to see whether a working day much shorter than at present is not economically possible.

As to welfare work, this must continue after the war, when there should be a single Government Authority. It should be the employers' duty to study conditions as he now studies cost of production; and the workers should strive for good conditions as they have striven for good wages. Compulsory action by the State should be used for the purpose of making universal that which experiment has proved to be right. Women superintendents should be appointed where women are employed in substantial numbers.

On the subject of trade unionism, the committee recommend that organisation should be encouraged in every way. Unions comprising both men and women were stronger for bargaining purposes than those consisting of women only.

In a lengthy section on training it is recommended that training must be closely associated to trade methods and requirements. Appenticeship, learnership, technical classes, instructional, national, or local factory courses, or combinations of those, should all be utilised. The cost both of training and maintenance should be made a national charge, and one department only should be made responsible for its administration.

The Outlook
July 12. 1919.

WOMEN AND THE TRADE PRACTICES BILL.

THE Bill for the Restoration of Pre-War Trade Practices is open to very serious objection. It raises almost as many difficulties as it solves, or settles, and much of what it proposes to do is wrong. In any case, many points will have to be settled by negotiation between employers and workmen after the Bill becomes an Act; but it ought not to go through Parliament without considerable amendment. The whole problem needs to be approached in a broad-minded spirit. Both employers and workmen should take the big view. On the one hand we cannot go back to pre-war wages; on the other hand, we ought not to attempt to go back to pre-war restrictions. Conditions have been changed since the "pledges" were given. It was one thing to promise full restoration, but the task of effecting full restoration now is a very different matter. Let it be frankly admitted that complete restoration is neither possible nor desirable. What was good in the old system let us have restored. What was bad, let it go. We cannot have full restoration; but we can have something better if we try. Let us aim at two things—the health of the workers and the efficiency of industry. Many of the old rules and customs were good for neither. Long hours occupied in dawdling labour by workmen, the resultant wear of machinery and waste of materials, were demoralising for the workers and detrimental to industry. Not only were some of the old conditions bad in principle and practice, but we have been obliged during the war to adopt many new and novel appliances, machines, methods, and even some fresh industries, whilst we have trained some extra grades of labour. All this has served us well in the war, and, if retained with suitable modifications, will serve us equally well in the peace. Without intensified production we can no more satisfy our peace-time wants than we were able to supply the necessary munitions without intensified production during the war. It would be neither right nor reasonable to attempt to restore all the pre-war customs after what we have done and seen in the war period, and in view of the urgent need for large-scale output to make good the arrears and damages due to the war. The old practices will not fit the new conditions created, nor the better conditions we are all aiming at. The policy of setting a highly skilled mechanic to watch one simple repetition machine when a youth or woman could comfortably watch three such machines will never supply the nation with an abundance of good things—it is just the policy of scarcity and starvation. Unfortunately, many of our workmen hug economic fallacies, and the task of spreading the truth is not easy. But it must be tackled if we are to escape commercial ruin.

One of the greatest difficulties raised by the Trade Practices Bill is in connection with the employment of women. If the measure goes through in its present form, and if workmen insist upon certain rights or privileges authorised, the results will be unfair to the women and detrimental to the nation. The Bill has been drafted to a very large extent to please the Socialist elements in the trade union world. It seems that the main pre-war practice which it is intended to restore is the exclusion of women from those occupations closed to them before the war. What was forced by trade union pressure is now to be legalised by the State. That is bad enough as its stands; but it is worse to find that the Socialist wire pullers have set their minds on excluding women even from certain occupations which were open to them before the war. More unfair still, the intention is revealed to push the women out of the fresh industries, or new branches of industry, which have been created and developed by the women, and even this is authorised by the new measure.

We are assured that this is an "agreed" Bill. It is agreed in the sense that its provisions have been dictated by a particularly narrow-minded clique of trade unionists and accepted by the employers concerned on the principle of "peace at any price." The hundreds of thousands of women involved have had no part or lot or say in the matter. The Bill puts the women at the mercy of the men. The trade unions are given power to exclude women from every branch of industry which can possibly be described as engineering. Representative women trade unionists and workers in women's interests have endeavoured to secure justice, but without the slightest success. The Socialists have openly declared that no consideration of justice for the women must be allowed to stand in the way of the "campaign against capitalism." The women are to be kept out with a view to hastening the overthrow of the capitalist system. The fact that the women came forward to help the nation in its hour of trial, and that many of these women might now be useful in the production of many things so urgently needed by all classes counts for nothing in their eyes. The fact that the casualties of war have reduced the number of available husbands and condemned many women to lonely and independent lives is ignored by them. The women are to starve, industries are to be short of labour, and the nation is to go short of commodities, in order that the wild young Socialists may fight capitalism. It is to be hoped that the majority of trade union workmen will adopt the broad view and refuse to take the unfair advantages permitted by this latest measure. The question of employing women in unsuitable industries, or occupations, does not arise; the point is that women should be given a fair chance to earn wages under good conditions, in light and simple trades, and that the community should have the benefit of the increased production that would result therefrom.

The question of trade prospects is important in this matter of fixing up the conditions that are to govern our industries. Let us get it firmly set in our minds that the world is so short of goods—particularly manufactured and engineering goods—that there is as much trade offering as we can possibly cope with even if we employ every furnace, factory, man and woman we have got; let us realise that if only we get settled down to work, producing enough coal and iron and other materials, the problem will not be what shall we do with the unemployed but where shall we find enough workers; then we shall be in the right frame of mind for making good industrial agreements regarding hours, wages, woman labour and so forth. There is a tremendous and long-sustained trade boom in immediate prospect if only labour and capital will co-operate intelligently. On the one hand, employers must recognise that business and prices are going to be so good that they can afford to pay very high wages conditional upon obtaining anything like high-scale production. On the other hand workmen must realise that we cannot get enough trade to provide ample employment and high wages, we cannot have an abundance of commodities for our own consumption, we cannot have prosperity in any shape or form unless our instruments of production—our mines and factories—are made to produce in abundance and with reasonable economy. The recognition of these fundamental truths is the biggest of all big needs today in the British industrial world.

F. T. Good.

WOMEN IN INDUSTRY.

A Review of Cause and Effect.

In the guise of a review of the Report of the War Cabinet Committee on Women in Industry, the *Quarterly Review* for July has an important article on this subject by Sir Lynden Macassey, who was a member of that committee, and who has been engaged from the beginning of the war in organising women's labour.

The need of increasing production is now an accepted fact, but the "latent and unutilised capacities for production possessed by women" are unrecognised as yet. The article explains the problem from the economic point of view, and is divided into the three parts—before the war, during the war, and for the future.

Before the War.

"One may accurately summarise the pre-war position of women in industry by saying that it was pre-eminently characterised by a demarcation of work which handicapped severely women's potentialities, and by conditions of work which seriously impaired their physical and mental well-being." Such demarcation is economically sound so far as it excluded women from work beyond the compass of their strength, but only a comparatively small amount of it can be so explained. For the rest, it was due to the success of the men and their trades unions in claiming all the best and most highly remunerated classes of work, and to the prejudice of many employers to women workers. The conditions of work are described as "dehumanising." Wages were pittances, owing to the supply of women at such rates being ample. Many worked merely for pocket-money, others as a supplement to the family wage; they were unorganised, and had no power of collective bargaining. As a result woman labour was regarded as "cheap" or of the "blackleg" type. Environment was inferior to that of the men, owing to want of trades-union pressure and to shortage of factory inspectors.

During the War.

"At the end of the war, as compared with pre-war days, women had literally leapt, as agents of production, and by inherent economic powers and aptitude, into a position of eminence in the industrial work previously undreamt of even by themselves." Many had replaced men, and the "character of the work in 'women' trades was fundamentally altered." In skilled and jobbing work they were less efficient, but then the whole war period was less than the normal time of apprenticeship, and in comparison with youths put on at the same time they learnt as quickly or quicker. On work involving severe physical effort they did less in a given time than men. In "excess-production" work they proved equal, often superior, to men. "They seemed temperamentally immune to the deadening effect of monotonous work, to which men, on the other hand, are peculiarly susceptible." On the other hand, in work which needed a "combination of quick intelligence and manual dexterity within a limited ambit, women were invariably superior to men."

The statistical information upon which these general conclusions have been based is not disclosed in detail; possibly the summing up of the evidence is based substantially upon the opinions of those best qualified to testify as to conditions prevailing within specific industries. An estimate of the quality of the women worker when compared with the man worker may theoretically be improved when we reflect that the war woman worker was often drawn from scratch material, whereas the "indispensable" male worker, a trained person, was very largely in his place throughout the war.

The Future.

Sir Lynden lays down three master principles which should regulate women's future station in industry. The paragraph is worth quoting in full:

"First, women should always be entitled to such employment as is fully commensurate with their economic attributes and industrial qualifications. This concedes what is commonly called 'equality of opportunity,' repudiates the sex-prejudice by which women workers have been so unjustly handicapped, and, at the same time, discountenances the extravagant claims of certain sections of women that all kinds of artificial grades should be introduced into industry merely to assist the entrance of women. Secondly, the work at which, and the conditions under which, they are employed must be compatible physiologically and psychologically with their sex peculiarities. It cannot and must not be overlooked that women are 'the mothers of the race.' Thirdly, women must not be allowed to undercut and displace men. This is a practical danger which, if it became habitual, would be fatal to industrial concord. Without any doubt, as things are to-day, a woman of efficiency equal to a man, if obtainable—as she is in many cases—can always be secured, especially in unorganised trades, for substantially less remuneration than the man. It is imperative that this should not take place."

The Lesson.

We make no excuse for giving this short *epitome* of an economic paper. Physiological principles will more and more govern the handling of economic problems in the future. It is to the medical profession that the Government, the employer, and the Labour leader will turn for advice on these principles. We must therefore study to a greater degree than we have done in the past each economic problem as it comes to the fore. Perhaps at the same time we should remember that we must continue to study physiology long after the time that it has been customary to do so, in order that the advice we give may be based upon modern and up-to-date knowledge.

THE FIGHT THE FAMINE COUNCIL: ITS WORK.

FIGHT the Famine! Save the Children! These are fine rallying cries and they have been ringing in our ears for nearly a year. Are we weary of them? Do they express a passing emotion already burning out?

To those who really know, the crusade seems but hardly begun—for there is another reinforcing cry which has arisen in the last three months,—the League of Nations in peril! The threefold call is but one—a challenge to choose this day life or death for the human race. But what, it is asked again and again, can we do? How fight the famine, save the children, make secure the League of Nations? It is so easy to hold aloof, to say others wiser than ourselves are dealing with the matter and we must not "harass" them by interferences; it is easy to say the thing is inevitable, let us eat and drink even if to-morrow we, or others—especially others—die; it is easiest of all to abuse the government.

Nevertheless we, the ordinary men and women, remain responsible. We cannot really get away from it. Just as the gladiator's life in ancient times depended on the upturned thumbs of the crowd, so does the future of the world depend, not upon governments nor upon destiny, but upon the will of the people.

To come to concrete things. Some are confused when they learn that "Save the Children," "Fight the Famine," are not only rallying cries, but are the names of organisations, and being confused provides as good a reason for inaction as those set out above, so it is well to explain. There are, apart from the old-established relief societies, of the Friends and others, two organisations, with, so to speak, one adjunct—closely allied in purpose and in personnel, but distinct. The "adjunct" is the Fight the Famine Information Bureau (Hon. Sec. Mrs. C. B. Buxton), the two main bodies are the Fight the Famine Council and its daughter, the Save the Children Fund. The Fight the Famine Council was founded early this year; its office is 329, High Holborn, W.C., its chairman Lord Parmoor, its treasurer Mr. Noel Buxton; its secretary Miss Sheepshanks: its purpose to enlighten and organise public opinion and to bring legitimate political pressure in regard to the economic instability in Europe. Among its council it numbers Canon Barnes, Lord Henry Bentinck, Dr. John Clifford, Mr. J. R. Clynes, Lady Courtney of Penwith, Principal Garvie, Mr. Arthur Henderson, Mr. J. A. Hobson, Mr. George Lansbury, Miss Emily Leaf, Miss Mary MacArthur, Mr. H. W. Massingham, Professor Gilbert and Lady Mary Murray, Lady Parmoor, the Bishop of Peterborough, Miss Maude Royden and other representatives of various schools of thought. The Save the Children Fund was founded a little later. Its Hon. Sec. is Miss Eglantine Jebb, its chairman Lord Weardale, one of its patrons Lord Robert Cecil, its offices 7, St. James Terrace, Regent's Park, N.W. (removed from Holborn). It is distinct from the Fight the Famine Council because it refrains from political action, and from entering upon the questions of the causes and permanent remedy for the condition in Europe, and devotes itself to the task of raising and dispensing funds for the immediate relief, by voluntary means, of the children.

The special purpose of this article is to show that the work of the Fight the Famine Council as well as of the Save the Children Fund is necessary to combat the monster that threatens, and to win from the readers of THE CHALLENGE their generous support, both moral and material, for the less immediately and visibly effective, because more complicated, task of the Fight the Famine Council. The duty of giving immediate relief in kind is plain; if the duty of, as Sir William Goode, head of the British Relief Commission, put it a few days ago, helping the nations to help themselves, is not also plain, it must be made so.

The last years have taught us that persuasion by economic pressure is as hideous a thing to millions of human beings to-day, as was persuasion in the torture chamber in old time to an individual. The Fight the Famine Council seeks, apart from party politics as such, apart from private interests, apart from the advantage of a strong nation because it is strong, to help to solve, by every effort of brain and heart, the economic problem of paralysed Europe. The stake is not only war or peace between nations, but war or peace within nations. Only by the re-establishment of economic stability on a basis of co-operation can the human dignity of the nations be restored. The children die for want of food and clothing and fuel, but the grown-up people die a worse death, not only physical but mental and moral, because they lack, not only physical sustenance, but the means to express themselves by the exercise of their natural faculties.

It is obvious that grave financial and economic problems are involved, such as the ordinary man and woman are only too apt to think are the concern of the expert alone. But because we are a self-governing nation, we cannot, even if we would, refuse responsibility because our talents are few. What our governors do in our name, we do.

The Fight the Famine Council bases its right and duty to exist upon this fact. But it does not ignore the sister fact that the highly complex theory and practice of economics and finance are not created and applied by the heart alone, without the laborious studies of the expert. For a twofold reason, therefore, it is organising an International Economic Conference to be held in London early in November, to be followed (on the evening of November 5th), by a great meeting at the Central Hall, Westminster, to which the general public are invited, and at which an effort will be made to see whether the heart and brain and will of men and women of good will, whether students or ordinary people, cannot fight with and prevail over the demon of chaos that stands in the path.

A. HELEN WARD.

WOMEN IN INDUSTRY.

CONDITIONS OF EMPLOYMENT.

(By William Graham, M.P.)

The war has done much to hasten publi decisions regarding the position of women i industry. At the moment they are pro foundly interested in the important industria Bills which have just been presented to Parliament, and are now under discussion. Nothing more unfortunate could occur than that in dealing with such issues pre-war standards in thought and practice regarding women's work should prevail. Let us look briefly at some of the leading points which now confront men and women electors especially in the industrial areas.

Riches in Blue-Books.

The subject as a whole has been discussed in an exhaustive report by a War Cabinet Committee. Unfortunately, so powerful is the appeal of the illustrated periodical and other forms of the rapidly passing press that Blue-Books are hardly ever read; they are supposed to be for professors and students and the doubtful men called politicians. This report is really a very human document, for it brings home to women the great significance of the part they are playing in industry. There is a widespread impression, for example, that women should always receive lower remuneration than men. It would probably be difficult to cite a better example of the orthodox mischief which for so many years ruled this country. But the first recommendation of this Committee as to the principles which should now govern the relations between men's and women's wages is that women doing similar or the same work as men should receive equal pay for equal work, in the sense that pay should be in proportion to efficient output. It will be observed that this covers the principle that under systems of payment by results equal payment should be made to women as to men for an equal amount of work done. It would be impossible to exaggerate the importance of the application of this principle. It is obvious that while it would effect one of the silent and beneficent revolutions in industry which are always taking place in any progressive country, it would spread beyond industry, and touch the whole problem of responsibility for the obligations of the home. Up to a point the wages of men have often been determined by the view that they were primarily and legally responsible for the maintenance of the home, as, indeed, they are. But steps to sex equality in industry may be merely the prelude to that equality in the domestic sphere which has been the inspiration of much of the suffrage activity of recent years.

Men and Women as Producers.

It was further recommended that the relative value of work done by women and men on time on the same or similar jobs should be agreed between employers and Trade Unions. This could be done through the recognised channels of negotiation; it might be a trade board or an industrial council, an illustration of the very important work that these organisations may be called upon to perform. But let us suppose that an employer argues that a woman worker in his employment is not able to produce as much as a man. In that case the recommendation was that the burden of proof should rest on the employer. He would also have to produce evidence of the lower value of the woman's work. To that lower value, provided it is proved, it is suggested that the fixed sum to be deducted from the man's rate for the particular job throughout the whole of the industry should strictly correspond. No doubt, there would be many difficulties in determining the precise rate. Everyone is aware that when we begin to discuss value we embark upon a very restless and perilous ocean. The principle, however, is perfectly clear; women are not to be sweated because they are women; and women's work is not to be used to undermine the wage rates which men have won, and the maintenance of which is frankly recognised by the Government as absolutely necessary in view of the continued high cost of living.

When Women Were Sweated.

Now there were many spheres in which women in pre-war times were shamefully underpaid; in some of them, despite war conditions, the improvement to-day is not conspicuous. We all remember the painful facts which were revealed by the dressmakers' strike in Edinburgh two years ago, and the unanimity of public opinion in favour of the women and girls involved. Laundry workers in the past have been poorly paid for what is really an exhausting occupation. Women and girl clerks often received only a few shillings weekly. What really happened was that their parents or other wage-earners in their homes assisted them, and to that extent they were really subsidising their employers, who should have given them better conditions. No doubt many of the dressmakers and the laundry workers and the women clerks have improved their position; simple justice demanded that; but there is still much unnecessary wrong and suffering. To that also the Cabinet Committee directed its attention. It lays much stress on the view that the employment of women in commercial and clerical occupations especially requires regulation in accordance with the principle of equal pay for equal work. It further urges that this principle should be early and fully adopted for the manipulative branches of the Civil Service. Indeed, the Government were told very firmly that they should adopt the application of the principle with the least possible delay to their own establishments, that they should make it a condition of any Government contract involving the employment of men and women, and that the separate grades and separate examinations for women clerks in the Civil Service should be abolished, placing men and women on an equal footing in the competition for appointments.

Can Industry be Beautiful?

In addition to these recommendations, much attention was devoted to the conditions under which women and girls work in industrial establishments. The proposals involved amendment of the Factory and Workshops Acts to provide for suitable reduction in the hours of work, including arrangement of spells and pauses, overtime and night work; the provision of labour-saving devices to avoid unnecessary fatigue; an improved system of sanitation; the provision of canteens, rest-rooms, surgeries, especially where the industry is somewhat dangerous in character; and the general supervision of the health of the workers, individually and collectively. Much that is involved in these proposals has been the subject of acute investigation under what is known as scientific mangement, a sphere in which we have much to learn from the recent industrial history of the United States. Many of the progressive employers in this country have appreciated and even anticipated the value of these proposals. They have agreed with the best minds among the industrial workers that there is no reason why work should not be pleasant and agreeable, and that there cannot be the best in output or in anything else in industry where the task is a monotonous grind, from which even the elementary decencies are removed. All that is wanted is a little imagination and courage, and we can replace these hideous industrial areas, now covered with grime, ugly, repulsive, with every green thing vanished from the face of the earth, by the conditions which even now prevail at a Port Sunlight and elsewhere, where men and women know that industry, too, can be dignified and beautiful and in keeping with the highest aims and hopes of a generous people.

Northern Daily Telegraph.

SATURDAY, NOVEMBER 15, 1919.

WOMEN IN INDUSTRY.

The Women's Industrial League has published a report of an inquiry conducted by the Information Department with regard to the employment of women in industry. The report is issued in grateful tribute "to the women who came forward in the country's greatest crisis, confiding their future interests as workers to the State without any guarantee." The report shows a great increase in the number of women workers in the establishments engaged on work directly and indirectly connected during the war with the manufacture of munitions. The numbers have fallen since the war ceased, but there is still 84 per cent. increase over pre-war figures. In a "foreword" to the report gratification is expressed of the wholehearted appreciation for the women's work expressed by some of the employers, "and it is especially pleasing to find that while numbers of these women were introduced on to work of an entirely new character, they were able by their concentration, adapability, and determination in a comparatively short space of time to prove themselves valuable producers, winning the respect of their instructors and the praise of a large majority of the employers. These facts are infinitely satisfactory in view of the great wall of prejudice built up during many years of opposition to the admission of women to work requiring mechanical skill."

Yet well as the women performed their work, many have now to stand aside. Thousands of women have been turned out of the industries, despite their acquired skill and utility, "even though we are told that the shortage of the necessities of life is unprecedented, and that the delay in developing the housing schemes throughout the country is largely due to the lack of trained labour." An earnest appeal is made for an honest endeavour to establish in industry a basis of true loyalty between women and men. Many of the firms which employed women during the war have stated their willingness to retain some of them; others regret that their dismissal has been rendered necessary in order to provide for the demobilised soldiers and owing to lack of trade and the uncertainty of the future. Several firms are ready to reinstate women if agreements with the trade unions can be made; some others hope, with the expansion of trade, to begin new branches of work involving light operations, on which they propose to employ women.

Analysing the employers' attitude to the retention of women in industry, the report states that "if the number of firms who have never employed women is deducted from the total number of returns, there remain 1,146 firms employing women during the war (over 80 per cent.), and 382 of these (33 per cent.) had employed them before the war. It is interesting to note that 67 firms of this last-mentioned group propose to increase their numbers, in consequence of the greater experience of women's work gained by them during the war. Of the 764 firms employing women for the first time during the war, 228 (30 per cent., or over 16 per cent. of the total returns) propose retaining them. These firms make their remarks without commenting on the present labour situation. A further 97 firms state that they would be willing to retain women if it were not for trade union opposition to such a policy. Thus 707 firms (over 60 per cent.) of those who have tested women's work express themselves ready to continue their employment, because it has proved to be so successful. Nor must it be assumed that the remaining 439 firms are necessarily unwilling to use women's labour. Some are in the throes of reconstruction and unable to give an opinion, or in the process of regaining their pre-war trade, while others would be willing if work suitable for women is at any time forthcoming."

The objects of the Women's Industrial League, it should be explained, are to secure for women equal opportunities for employment in all occupations; equal training and educational facilities; equal treatment in regard to pay and working conditions; adequate representation of women by women on all official committees and public bodies. All women over eighteen years of age who support the above objects are eligible for membership.

Morning Post 20.11.'19

WOMEN IN WHITEHALL.

Protest on Behalf of Seventy Thousand Dismissed.

A protest meeting against the dismissal of women from Government offices was held last night at Caxton Hall, Westminster. The chair was occupied by Miss Key Jones, General Organising Secretary of the Women's Industrial League.

Mrs. Archdale, hon. secretary, thought that there was a certain danger in pushing the discharged soldier into jobs for which he might not be fitted, and which, later on, he might not be able to hold. Every soldier was not necessarily a clerk. It would be a terrible danger to the health of women if they were forced back into the worse than sweated labour from which they had scarcely emerged before the war. Other speakers followed in the same strain, one of whom stated that between sixty and seventy thousand women had been dismissed. Eventually a resolution was unanimously carried protesting against the dismissal of women, and calling on the Government to recognise the services of such women as are necessarily dismissed by providing adequate employment donation and by establishing training schools in suitable occupations for them.

Morning Post 1.11.'19

WOMEN'S INDUSTRIAL LEAGUE.

The Women's Industrial League, in a statement on the reconstruction work of the League, says the training schemes for women already in operation are restricted and inadequate; tailoring, dressmaking, upholstery, laundry, and cookery training cannot do more than touch the fringe of the question as to the future well-being of women thrown out of employment through the cessation of war work. The League demands a very much wider scheme of training.

Times. 19.11.'19

DISCHARGED WOMEN CLERKS.

A meeting arranged by the Women's Industrial League, protesting against the dismissal of women clerks from Government offices without any provision being made for them, will be held at the Caxton Hall to-night, with the support of the National Union of Clerks, the Women Clerks' and Secretaries' Association, and the Civil Service Union.

Common Cause 7.11.'19.

Turning Out the Women.

To read some newspapers to-day, and to hear some people talk, one would imagine that they wanted all women, no matter how experienced, to be turned out of professions and industries so long as one man remained unemployed. Sweeping assertions are made without instancing any particular cases of women actually taking the positions of demobilised soldiers. Educated women who have done excellent work in Government offices are termed "flappers," and are jeered at and boycotted. Many new departments have necessarily started during the war, and women should have their share of the clerical work needed. Women yield to none in acknowledging that ex-soldiers have the first claim to consideration, but there is plenty of work to be done, and there is also a woman's side to the question. Many of the women in Government offices were already earning their living before the war, and took up this work as a means of putting their experience at the disposal of the country. It is only fair that the services of these women should be retained as long as they are needed. Again, a large number who before the war were not obliged to work, are now forced by economic conditions into the labour market. It is extraordinary that at a time like the present the services of every experienced man and woman should not be considered of value to the country. A bank manager said, in answer to an enquiry a few days ago: "My women clerks are excellent. I shall keep them as long as I am allowed to." Is it not strange that an employer should not be "allowed" to employ the workers whom he considers the most efficient? *The Daily News* gave a leader to this problem last week, and summed it up by saying: "What is plain in the meanwhile is that it is not possible to 'turn the women out,' if turning them out is a synonym for starving them."

Common Cause 16.1.20.

The Women's Industrial League.

The Women's Industrial League, which has for its chief object the economic equality and independence of women, is very active in educating young women to appreciate the importance of organisation on these lines. It has a speaker's class, and its Monday lecture and discussion, which is open to the public, offers an opportunity to all wage-earning women to learn what equality is and what it is not. This week the speaker was Captain Sanders, the Secretary of the Fabian Society. In answer to a question the speaker advised women in employments which had no already established Trade Union for men and women together, to organise themselves rather than co-operate in a mixed Trade Union. His belief that women organising alone were less handicapped by inexperience than if they act in combination with men is interesting, and deserves a very full discussion.

PEACE LEVEL OF WAGES.

MANY DEMANDS BY LABOUR.

RISING COST OF LIVING.

(BY OUR LABOUR CORRESPONDENT.)

The announcement in the current issue of the *Labour Gazette* that the general level of retail prices of food and other items on October 1 was 120 per cent. above the pre-war level, as compared with 115 per cent. a month earlier, will not be overlooked by trade unionists. Though these figures are not accepted by the workers as more than index numbers, sufficient importance is attached to them when any proposal to demand higher wages is afoot.

Take, for example, the case of the ironfounders. When their application for an advance of 15s. a week was before the Interim Court of Arbitration last June, the cost of living figure stood at 105 per cent. The application was rejected. Since then, as the following table shows, the figure has increased until it now stands higher than it has been for eight months and nearly as high as it was just before the Armistice.

January	120	June	105
February	120	July	105-110
March	115	August	115
April	110	September	115
May	105	October	120

There is no sign of any downward movement. On the contrary, with increases in rents, rates and railway charges in prospect a further rise may be expected. In these circumstances the ironfounders have perhaps naturally taken the view that a guarantee against any reduction in present earnings before September 30, 1920, will not help them to meet their increasing household expenses, and they have therefore decided to persist in their strike, not against any threatened cutting of wages, but in support of a demand for higher wages. They struck nearly a month ago for an advance of 15s. a week.

Within a few days, under the national agreement to which they were parties, a wage application for at least that amount will come before the Arbitration Court from some 50 trade unions in the engineering and kindred trades; but the award will not be known for some weeks and will not become operative until December 1. The ironfounders, who are no longer parties to the agreement, have rejected by constitutional procedure of the ballot a settlement made by their leaders, and the strike which should have ended to-day is to continue. No doubt the leaders of the three unions concerned will lose no time in seeking a new settlement with the employers, and it is anticipated that negotiations for this purpose will be reopened early this week.

BONUS AND PERMANENT WAGES.

To-day the Minister of Labour is to have a further conference with representatives of the Federation of Engineering and Shipbuilding Trades, the A.S.E., and the National Federation of General Workers on the question of the method of dealing with wages, with particular reference to the conversion of war bonuses into permanent wages, the procedure for settling future demands for advances, and the renewal or discontinuance of the Wages (Temporary Regulation) Act. There are here two distinct issues—"consolidation" and "stabilization." On September 19, as reported in *The Times* of the following day, Sir Robert Horne had a general consultation with the unions on the peace basis of wages, and arranged to meet them again after he had ascertained the views of the employers.

Last week the Minister had a conference with representatives of the Confederation of Employers' Organizations, but what the result was it is impossible to say. "Consolidation"—that is, the conversion of present wages, including war advances, into permanent rates of wages—is obviously a question for negotiation and settlement by employers and workers, without, if possible, any dictation by the Government. But "stabilization" is a question for the Government to decide. Already, in the case of the railwaymen, they have given a guarantee against any reduction in present wages until September 30, 1920. The offer of the Engineering Employers' Federation to give a similar guarantee to the ironfounders may be regarded as the first-fruits of the railway strike. It is difficult to see how the Government could now refuse, if there were any real demand for it, an extension of the Wages (Temporary Regulation) Act from November 21, when it is due to expire, to the end of next September. This is a question which will have to be settled in the next week or two, for legislation would be needed to prolong the operation of the Act, and it is not certain that such legislation would be regarded in Parliament as non-contentious.

NATIONAL INDUSTRIAL COUNCIL.

To-morrow, Mr. Henderson, Mr. G. D. H. Cole, and other representatives of the workers' side of the Provisional Joint Committee of the Industrial Conference are to see the Minister of Labour in order to discuss the exclusion of agriculture from the 48-Hour Bill, and the threatened abandonment by Labour of the scheme for a National Industrial Council.

On Wednesday a special conference of the Miners' Federation of Great Britain will be held. It was originally called to consider the high cost of living, the question of the income-tax exemption level, and payment for week-end work. The South Wales miners have some rather drastic proposals to put forward in regard to wages. They also intend to suggest that the Government's refusal to raise the exemption level to £250 should be met by a general refusal to pay income-tax. There is material enough in these proposals for a lively conference, and perhaps some violent decisions.

THE NATIONALIZATION DEMAND.

But it is expected that these questions will be overshadowed by the question of the nationalization of mines. The Government have given a firm refusal to the demand for nationalization, and Mr. Frank Hodges has replied at a Labour meeting by a mysterious reference to the "strategic policy" of the miners, which "in the next three months may put your loyalty to the test." What that "policy" is only Mr. Hodges and his colleagues know.

On Thursday the negotiations between the N.U.R. and the Government on the standardization of railwaymen's wages will be continued. At last week's meeting in Downing-street, it is understood, Mr. J. H. Thomas put forward some general proposals as a basis for discussion. The Prime Minister and his fellow-Ministers undertook to consider them, and their reply will probably be given to Mr. Thomas this week.

The third party to the Triple Alliance—the Transport Workers' Federation—is not inactive. It has just obtained an arbitration award of a wage increase for tramway and omnibus workers and it has submitted to the employers new and rather considerable demands for dock and riverside workers.

Morning Post 13.11.'19.

WOMEN IN INDUSTRY.

Attitude of Firms to Their Retention.

The question of the extent to which women may, with advantage to themselves and from the point of view of national production, be employed in industry is raised in a report issued by the Women's Industrial League founded under the presidency of Viscountess Rhondda as soon as hostilities ceased, and whose object it is "to secure equality of treatment and opportunity for employment of women." The report, which embodies information received from over 1,400 firms, covering a wide field in engineering and other trades, calls attention to the thousands of women who have been turned out of these industries despite the shortage of trained labour, and the necessity for increased production.

TRADE UNION OBSTACLE.

A circular letter with a *questionnaire* attached was addressed to 5,000 firms in England, Scotland, and Wales, and replies were received from 1,422. Firms who have employed women on the lighter processes have (says the report) expressed themselves, almost without exception, as being highly satisfied with their work; many state they are willing to retain some of the women, and others regret that the return of the demobilised soldiers, lack of trade, and the uncertainty of the future has meant their dismissal. Several firms promise to reinstate the women if agreements with the Trade Unions can be made.

At the end of May, 1919, it appears that 79,700 women were employed, as against 24,300 before the war. A third of the firms who employed women for the first time during the war have been able to retain them on some processes, and a further third would be willing to keep them on but for the opposition to such a policy. Of the firms which had employed women in pre-war days, 67 propose to increase their number.

Morning Post 29.11.'19.

Viscountess Rhondda, presiding at a public meeting last night, convened by the Women's Industrial League, said the attitude of the Ministry of Labour appeared to be that there were only three forms of work suitable to women—tailoring, laundry work, and domestic service. The Ministry, she added, must have been asleep during the war.

WORK OF THE WOMEN'S INDUSTRIAL LEAGUE.

"We are out to see women's status raised, politically, industrially, and professionally," said Miss Key Jones, the able secretary of the Women's Industrial League. "Among other activities we have brought forward the question of women architects before the Ministry of Health in connection with their housing scheme, and we have secured the support of the Ministry in appointing women architects. Already several names have been brought forward."

Lady Rhondda's Interest.

The Women's Industrial League was formed barely 11 months ago, with Lady Rhondda as president, to safeguard the interests of industrial women. An interesting report on women in engineering and other trades shows that, though the number of women employed are, of course, lower since hostilities ceased, there still remains an 84 per cent. increase over pre-war figures.

The report has been compiled from information obtained from over 1,400 firms, covering a wide field in engineering and other trades. The question of civil workers in Government offices is not dealt with.

Ability the Only Test.

On the whole, judging by answers to a questionaire sent out by the League, women appear to have justified their entry into the realm of industry.

One employer writes that he is "dead against any attempt to exclude women from any profession or industry. The only test should be that of ability."

Furniture Making.

Among post-war industries for women where there are many light processes involved is furniture making, an industry in which women have made big strides during the war, even being employed as carpenters. Another industry which belongs essentially to women is the making of toys.

Ninety-seven firms say that they would willingly employ women on machines and others on work for which they have proved suitable were it not for the opposition of the trade unions.

Manchester Guardian 8.11.'19

A Report on Women's Industry.

It is only a year since the Women's Industrial League was formed, with Lady Rhondda as president, to safeguard the interests of industrial women. The idea was that the position of those women would inevitably be changed by the ending of the war. Now the League has published a report on women in engineering and other trades, founded on answers received from over 1,400 firms to inquiries which were sent to 5,000 firms.

The report shows that, though the numbers of women employed have so greatly decreased, there still remains an 84 per cent increase over pre-war figures. A foreword suggests that the reasons given by the firms for dispensing with the women's services and the difficulties said to prevent their reintroduction could in many cases be dispelled by a proper understanding of the position. Ninety-seven firms say they would willingly continue to employ women expert machinists and others on work for which they have proved very suitable were it not for the opposition of the trade unions. One employer writes that he is "dead against any attempt to exclude women from any profession or industry. The only test should be that of ability."

The many extracts from employers' letters, both for and against the continued employment of women, are of considerable value, and so is the table showing the increased number of processes on which women have been engaged.

Iron & Coal Trades Review Jan 23. 20.

Some 5,000 firms in Great Britain have been asked by the Women's Industrial League for a statement of their experience of women as industrial workers. Over 1,400 replies have been received, covering a wide field in engineering and other trades, and, upon the whole, they may be regarded as satisfactory by the League. The replies, as scheduled, show that 1,422 firms were employing 79,700 women at the end of May last, as compared with 43,200 before the war, and 245,300 during the war. Of 382 firms who employed women before the war, 67 propose to increase the number, in consequence of the larger experience of women's work gained by them; while of 764 who employed women for the first time during the war, 228 propose to retain them. A further 97 firms state that they would be willing to retain women but for trade union opposition. Taking all the figures, the estimate is that over 60 per cent. of those who have tested women's work are ready to continue employing them. In some districts women are employed in certain industrial processes without opposition from men, while in others they are debarred from sharing in those very processes.

Daily Telegraph - 13. 3. 20.

WOMEN'S INDUSTRIAL LEAGUE.

Miss Julia Varley, who has done much for domestic w rkers in Birmingham, will address a meeting to be held by the Women's Industrial League in the Conference Hall, Central-buildings, Westminster, next Monday, at 8 p.m., on "The Organization of Domestic Workers."

Engineering 7. 3. 20

RESTORATION OF PRE-WAR PRACTICES IN WORKSHOPS.

An important judgment was given by Mr. Justice Roche on February 27, 1920, in an appeal by Messrs. Smith, Barker and Willson, machine tool makers, Halifax, against a judgment of the Halifax Munitions Tribunal in a prosecution against them on behalf of the Amalgamated Society of Engineers under the Restoration of Pre-War Practices Act. The facts, as they appear from the judgment of the Tribunal, were as follows :—

Prior to the war, females were not employed by the firm on machine work, but during the war the firm introduced female labour on fitting, turning, slotting and general machine work, and they still continued to employ a considerable number of women on that work. The object of the prosecution was to compel the firm to revert to male labour. The Union contended that as the firm had departed during, and in consequence of, the war from the pre-war practice of the establishment they were bound by the Restoration of Pre-War Practices Act to restore their pre-war practice and have the work done by male labour for the period of one year fixed by the Act. On the other hand, the firm contended that there was a general practice in the industry of employing women on the work in question and that although they had departed from their own pre-war practice they had not departed from the trade practice and were therefore not bound to revert to male labour. The Tribunal adopted the union's contention and, it is understood, refused to hear evidence of the general practice, and convicted the firm of a breach of the Act and imposed a modified fine. The firm appealed. The appeal raised the question of the construction of Section 1 (sub-section 1) of the Act, on which conflicting decisions had been given by the tribunals in different parts of the country. Read by themselves the words of the Act seem plain enough. They are as follows :—

"Where in any establishment to which this Act applies, any rule, practice or custom obtaining before the war in any industry or branch of an industry (hereinafter referred to as a trade practice) has during and in consequence of the present war been departed from, the owner of that establishment shall be under an obligation . . . to restore or permit the restoration of the trade practice so previously obtaining, and for one year after such restoration is effected, or if it has been effected before the date of the passing of this Act for one year after that date, to maintain and permit the continuance of the trade practice."

The unions, however, relied on the fact that paragraph 1 (which has been repealed by the Restoration of Pre-War Practices Act) of Schedule II of the Munitions of War Act, 1915, provided in effect that any departure during the war from the practices "ruling in the workshops, shipyards and other industries" prior to the war, should be only for the period of the war, and that in terms of paragraph 6 the owners of a controlled establishment were bound to keep a record of the nature of every departure from the conditions prevailing when the establishment became a controlled establishment.

Mr. Justice Roche pointed out that it did not follow that every departure from the conditions which prevailed in an establishment at the time when it became controlled was a departure from a trade practice; and he held that the words above quoted from the Restoration of Pre-War Practices Act deal with trade practices of general application. He added: "In this connection I observe that much stress is laid in the decision under review upon the consideration that unless its view be adopted the Act will be nugatory. I do not agree. Exceptions may exist in this as in other spheres where rules are ascertainable, and in my view neither universality nor absolute uniformity is necessary to establish the existence of a rule, custom or practice within the meaning of this Act. The good sense of tribunals can, I am sure, be trusted to administer the Act without any necessity to limit their purview to each particular establishment brought before them to the exclusion of more general consideration."

The conviction was therefore quashed and the case was remitted back to the Tribunal to be proceeded with in accordance with the above ruling. A judgment to the same effect was given a few days later, viz., on March 2, 1920, by the Scottish Munitions Appeals Judge, Lord Sands, in the Glasgow case of Prentice *v.* Wm. McPhail and Sons.

Common Cause
2. 1. 20.

A Pre-War Practices Case in Glasgow.

An important decision has just been delivered in Glasgow on the question of restoration of pre-war practices as it affects the employment of women in brass-moulders' work. Three women had done light core work during the war in a factory which had customarily employed apprentices for that process, and the Brassmoulders' Union complained that they were retained in contravention of the Restoration of Pre-war Practices Act. The Sheriff upheld the complaint on the ground that the "practice" to be restored was the pre-war custom of the individual establishment, not of the trade or industry as a whole. Leave of appeal was granted, and the case is likely to be heard before the Appeal Judge in Edinburgh. If the Sheriff's decision stands the three women in question must be dismissed, but the right of women to work in establishments where they had been employed contrary to the usual trade custom before the war, would seem to be guaranteed. The balance of advantage will then on the whole be against women. But the exact wording of the Appeal Judge's verdict will be carefully watched for its bearing on the much larger question of establishments which have come into being since the outbreak of war. What is an "establishment" in this sense? Can the same firm employ women in some factories or some buildings of a factory and not in others, though the work is identical?

TRAINING OF WOMEN.

A deputation comprising representatives of various women's organisations was received yesterday by Sir Robert Horne, the Minister of Labour. After a meeting lasting nearly three hours it was intimated that an official statement would probably be issued later. Mrs. Sanders, a member of the executive of the Women's Industrial League, introduced the deputation, which included Miss Key Jones, General Working Secretary of the Women's Industrial League; Miss Rennie, of Birmingham; Miss Reddell, representing the employees, and Miss Francis, representing the employers, of the Birmingham Scheme; and Miss Dorothy Evans, of the Association of Women Clerks and Secretaries.

The object of the conference was explained by Miss Key Jones, who said it was to secure for women a wider field of training in the industrial world. One of the main requisitions was that the maintenance grant should be made sufficient to maintain women and girls during the period of training. The deputation were by no means disappointed at the way in which their case was received.

Newcastle Journal
31. 1. 20

Women Out of Work.

Official figures give the number of unemployed women at 52,000, but, in the view of the Women's Industrial League, the true figure is nearly double, for the Employment Exchange returns do not include all working women, besides leaving out of account altogether a large number of the professional and clerical women who are still looking for something to do but have no use for the Employment Exchanges. Many women who had not earned their living before the war must now keep themselves, and sometimes dependants as well, in some cases because of deaths in action; in others because of diminished income. New and strong representations are being made to the Government to see that this large number of unemployed women are given opportunities for training, accompanied by an adequate maintenance grant, and that the doors of industry are not closed to them. It is contended that recently arranged rates tend to penalise women, and a case in point is that of Woolwich, where the Government is arranging to employ numbers of men but no women on peace-time employment.

Evening News.

A WAITRESSES' UNION?

An effort is to be made to organise London's waitresses and other women restaurant workers.

The matter has been taken up by the Women's Industrial League, who are holding a meeting next Monday at the Central Hall, Westminster.

An official of the League told The Evening News to-day that hundreds of waitresses in London are working under scandalous conditions.

The Machinery Market
6. 2. 20.

Some 5,000 firms in Great Britain have been asked by the Women's Industrial League for a statement of their experience of women as industrial workers. Over 1,400 replies have been received, covering a wide field in engineering and other trades, and, upon the whole, they may be regarded as satisfactory by the League. The replies, as scheduled, show that 1,422 firms were employing 79,700 women at the end of May last, as compared with 43,200 before the war and 245,300 during the war. Of 382 firms who employed women before the war, sixty-seven propose to increase the number, in consequence of the larger experience of women's work gained by them; while of 764 who employed women for the first time during the war, 228 propose to retain them. A further ninety-seven firms state that they would be willing to retain women but for trade union opposition. Taking all the figures, the estimate is that over 60 per cent. of those who have tested women's work are ready to continue employing them. In some districts women are employed in certain industrial processes without opposition from men, while in others they are debarred from sharing in those very processes.

Morning Post
23. 2. 20.

50,000 WOMEN WAR-WORKERS UNEMPLOYED.

The Women's Industrial League calls attention to the fact that while the solution of economic and financial problems is to be found in increased production, there are over 50,000 women war-workers now unemployed. They are anxious to increase the national wealth, but are not allowed. By the Pre-War Practices Act women have been turned out of works at Halifax and Glasgow, while at Bath, Rochdale, and several other places women have been dismissed at the instance of the Unions concerned. These women, the League protests, do not want to undercut or to take away other people's jobs, but only to help in industry so that their employment may mean greater employment for all.

Times Emergency Supplement
20. 2. 1920

The Apprenticeship of Girls.

Those who believe that women might be employed advantageously both to themselves and to the country in many of the lighter branches of the mechanical trades must realize that a proper training in handicraft is a necessity to all workers who aspire to be more than mere machine minders or unskilled employees. More than this, such training, if it is to be useful in a factory, must be acquired in a factory where manufacturing is carried out on a commercial basis. Hence, if women are ever to be fitted for the more responsible and better-paid factory positions, some method of training girls must be provided. Equal training and educational facilities for both sexes is one of the objects of the Women's Industrial League, but we do not know how the league proposes to bring it about. To put young girls into the shops as boys are drafted in is simply out of the question in the opinion of every one familiar with workshop conditions, even if the trade unions would permit them to get their training in this way. If girls are to be apprenticed, they must get their training in special women's factories. Done systematically, it takes only a fraction of the time occupied in the old-fashioned apprenticeship, and it is rather surprising that those who have so firm a faith in the justice and expediency of opening the doors of the lighter and more skilled mechanical trades to women should not have shown the courage of their convictions by promoting the establishment of such factories. It might be necessary at first to rely upon a skeletal male organization until such time as a supply of suitably trained women for the executive positions was forthcoming; but in view of the vast number of women who have acquired a certain mechanical knowledge during the war, it should not be difficult to staff such a factory almost wholly with women, as, indeed, was done in more than one factory during the war. Not until some such step is taken is it likely that women will be provided with facilities for the training that is essential if they are to enter upon the better-paid positions open in industrial life.

TRADES UNION CONGRESS GENERAL COUNCIL

Transport House, Smith Square, London, S.W.1

APPLICATION FOR ADMISSION

TO THE

Mary Macarthur Holiday Home for Working Women

"THE GABLES," ONGAR, ESSEX

(1) Name	
(2) Address	
(3) Name and Address of nearest relative (in case of illness or emergency)	
(4) What was your age last birthday?	
(5) Are you Married or Single or a Widow? ..	
(6) What is your usual occupation? .. .. (in case of member's wife carrying out household duties insert "Housewife")	
(7) (*a*) Union of which you are (or your husband is) a member	
(*b*) Branch of Union	
(8) What is the date on which you wish to come? (Before you make any definite arrangements please await notification as to whether there is a vacancy on this date)	
(9) How long do you wish to stay?	

Visitors are asked to commence their holidays on Fridays or Saturdays, if possible. This enables Matron to organise the Staff work, and also the excursions and amusements of the visitors more easily and satisfactorily.

Please note that return Railway Tickets to Ongar can be obtained for one-and-a-third single fare on presentation at the Booking Office of a Voucher. This Voucher will be sent to you later.

If admitted to the Home, I agree to co-operate loyally with the Committee and the Matron in the arrangements for the comfort and well-being of the Visitors. I understand that :

(1) The length of stay cannot be more than two weeks, unless special sanction is received.

(2) No Visitor is allowed to bring intoxicants into the Home.

(3) Visitors should give the *Matron* 48 hours' notice of time of arrival.

(4) If it is desired that luggage should be conveyed from the station to the Home a note to this effect should be given to the Matron when sending date and time of arrival.

Signed..... *Date*.....

MEDICAL CERTIFICATE

It will be necessary to obtain and forward to the Trades Union Congress a MEDICAL CERTIFICATE on the special form prescribed by the Committee of the Home. All applicants should note that "The Gables" is a Rest and Holiday Home and not a Convalescent Home. There is no resident Doctor or Nurse.

AFTER THE WAR.

CAMPAIGN FOR INDUSTRIAL SELF-GOVERNMENT.

It may be regarded as a sign of the times that, at the first meeting last evening of the Industrial Reconstruction Council, the Ministry of Reconstruction was represented by a woman—Miss Mona Wilson.

Before she joined the Ministry of Reconstruction Miss Wilson was National Health Insurance Commissioner for England, and she is also secretary of the Women's Trade Union League and a member of the Trade Boards for the chain-making and paper-box industries. She is, too, a member of the Whitley Committee, and she strongly supported the establishment of the Council as a propagandist body. It was extremely important that Capital and Labour should understand what a very wide field was open to the Whitley Councils if set up in all industries, and how necessary they were as representative bodies with whom the Government could negotiate in all matters affecting labour, commerce, and industry.

Sir Wilfrid Stokes, K.B.E., president of the Reconstruction Council, was in the chair at last evening's meeting, and among the speakers was Mr. Ben Tillett, M.P., who emphasised the need for a propagandist body which would help to remove the distrust of labour and the contempt of capital. The need of the future was not only efficiency of labour, but efficiency of capital. He was glad to associate himself with a body which had for its object the education of all parties in the real position of industry.

Mr. Ernest J. P. Benn, of Benn Brothers, Limited, in presenting the report of the provisional committee, laid emphasis on the single purpose of the new Council. It was a propagandist body, and its battle-cry was "Self-Government for Industry." The only way by which the nation could work out its industrial salvation was to establish within each trade a self-governing body representative of all those engaged in that trade and charged with the duty of maintaining and developing it in the national interest. The membership of the Industrial Reconstruction Council was open to all sections of the community, of whatever shade of opinion, the only qualification being a genuine desire to promote the doctrine of Industrial Self-Government.

The Industrial Reconstruction Council will start immediately on a great campaign throughout the country, and in every trade, with the object of awakening, on the one hand, public interest in the vital problems of industry, and, on the other, encouraging the representatives of the trades themselves to meet together and take concerted action for the full development of their industries.

The draft constitution submitted by a provisional committee was approved and adopted.

INDUSTRY AFTER THE WAR.

LABOUR SHORTAGE, NOT TRADE DEARTH.

Speaking at the Birmingham Rotary Club luncheon, yesterday, on the subject of "The Woman in Industry," Professor A. W. Kirkaldy, of Birmingham University, said he had no doubt the woman in industry had come to stay, and when the men understood what she did they would be quite willing for her to stay. People sometimes talked as though there would be a period of depression after the war. In his opinion the war would not have ended long before there would be great commercial activity. People talked of the time when the soldiers would be coming back from the front, and wondered what would become of the women then. They spoke without examining the position at all carefully. Before the war we had a labour force of about 8½ million people, of whom about 25% were women. We had taken about 2½ millions from that labour force of 6½ millions and put about 1½ million women into their places. That meant that we were about three-quarters of a million short of the labour force we originally had available. That was the extraordinary point. The country had been called upon to give an augmented output with three-quarters of a million workers short of the numbers engaged before the war. And we had done it. When that great organiser Lord Kitchener told them that he wanted an increased output he knew what he was talking about. The output had been given, and this country had performed the miracle that Lord Kitchener had asked it to perform.

The speaker went on to say he did not believe that the disbanding of our army would produce the dislocation so many feared. Of the 2½ millions of men taken from industry, a considerable number had been either killed or permanently injured. Then a considerable number would never return to their old avocations; having tasted of the outdoor life, they would never settle down in small houses in crowded towns again. Probably they could account for half a million in that way. So that the number to return to our industries was not so formidable, after all. Then again, the army would not be disbanded suddenly. Even when peace came, a million men would probably be kept under arms for a considerable time; they would be required to do what might be described as police work. The conviction he had was that it would not be trade that we should be short of after the war, but labour. He believed there would be an actual dearth of workers; there would be more work than workers.

The Best Equipped Nation in the World.

Then, after the war we should be the best equipped nation in the world. We had crowded the country with the finest machinery the world could produce, and that ought to be a great asset to us. We had the best machinery, the best labour, and the best organisers, for he was perfectly certain that the British employer was the best organiser in the world. He had proved himself so during the war; and if labour and capital would only come together there might be an era of great prosperity before us. But there must be no suspicion. Labour must not be kept in the dark. Manufacturers must say to the recognised leaders of labour: Here is this great mass of trade waiting to be done. We can do it, and we can afford to pay good wages if you will give us the output. But there must be no secrecy; all must be fair and aboveboard. There must be no cutting of the rate because men happen to be earning considerably more than they earned before the war. They were entitled to earn more; it would be to the employers' advantage to pay them good wages. There would be only two European nations ready to cope with the world-demand that would arise after the war. In railway material and rolling stock, in shipping, in houses and house requisites, in every direction there would be a world demand. Stocks had vanished. Only England and Germany could effectively supply those demands. Germany had deliberately crippled France and Belgium industrially, and even though we dictated peace terms to Germany in Berlin it was not likely that we should cripple her factories as she had crippled those of the nations whose territory she had ravaged. That was not our way. But we should have the chance of doing a huge trade; all that was needed was unity of effort, and a period of prosperity and happiness as a nation was before us. (Applause.)

Times.
4.3.18.

BETTER WORKING-CLASS HOMES.

LESS LABOUR: MORE COMFORT.

A Women's Sub-Committee of the Advisory Council has been appointed by the Minister of Reconstruction to collect information and to give advice on house plans from the point of view of the housewife. It is felt that in the past in the preparation of plans for working-class houses sufficient consideration has not been given to the comfort and convenience of the women who are to live in the houses. It is hoped that no considerable scheme of house-building will be undertaken in the future without careful attention being given to the saving of labour for the wife and to the convenience and health of the family generally.

The members of the Committee are:—
Lady Emmott, chairman.
Mrs. E. Barton, of the Women's Cooperative Guild.
Mrs. Victor Branford, of the Housing Organization Society.
Miss A. Churton, of the Rural Housing and Sanitation Association.
Dr. Janet Lane Claypon, Dean of the Household and Social Science Department, King's College for Women.
Mrs. Sanderson Furniss, of the National Women's Labour League.
Mrs. G. S. Guy.
Mrs. C. S. Peel, of the Ministry of Food.
Secretaries:—Miss Leach and Miss Waley, of the Ministry of Reconstruction.

Although most of the members are connected with various departments and organizations they have been appointed in their individual capacity, not as representing any organization. The duties with which they have been entrusted are, briefly, to examine specimen houses and to advise on house plans received from the Architects' Committee. They will also report on such questions as internal fittings, position of doors and windows, size and number of rooms, gardens, communal arrangements, and the laying out of new districts in so far as it may affect the well-being of homes and the convenience of housewives.

Selected districts both in town and in country will be visited by the Committee, and they will get into touch with women whose experience and cooperation might be of value, and who might initiate discussions on housing questions in their own districts. The Committee have already begun their duties, and they have inspected houses on the Kennington estate of the Duchy of Cornwall.

THE WOMAN'S POINT OF VIEW.

The Women's Labour League is conducting a housing campaign. The opinions of working women on structural arrangements for convenience and comfort in a home have been invited by questions printed in a leaflet which has been distributed with architects' plans for a house to accommodate a family of five or six persons.

The Central London branch of the League held a conference of working women in Kingsway Hall on Saturday, at which many representatives of women's societies were present, and the chair was taken by Mrs. SANDERSON FURNISS, who said that replies to nearly 10,000 leaflets were coming from all parts of the country, and that these, with reports of conferences, would be embodied in a book as evidence to put before the authorities.

After discussion a resolution was passed requesting the Local Government Board, before sanctioning any plan of housing, to consider representations from working women on interior construction.

Times 10.10.18

WOMEN IN INDUSTRY.

POSITION AFTER WAR.

The general question of the position of women workers after the war has just been considered at an unofficial conference between leading trade union women and employers of labour, arranged by the National Alliance of Employers and Employed, Mr. FREDERICK HUTH JACKSON presiding.

The first question discussed was whether the one and three-quarter million women who, in addition to the three million in industry before the war, now compose the women's industrial army, could be retained in industry after the war. It was pointed out that there was to be first considered the pledge of the Government to the trades unions that the men should all go back to their old jobs, and that pre-war conditions should be reinstated in industry. There was also the extreme difficulty of the conversion of the factories from the production of war materials to the needs of peace, and there was the further problem of the obtaining of necessary raw material, so that there should be no break in the work. It was felt that the terms of peace would have an important bearing on the question. It was also anticipated that the rate of demobilization would be an important factor.

It was realized that the Government must fulfil its pledges to the trades unions, but this was seen in no way to apply to new industries, or to the extension of old industries that have led to the employment of an increased number of workers, as compared with pre-war figures. The general opinion was expressed that while there would be a temporary period of dislocation, during which the whole community would have to be patient, and work on a give-and-take basis, there was little doubt that there would ultimately be work for all, and the whole of the women at present in industry could be retained.

The possibility of a minimum wage was discussed, and the meeting was unanimous that such was advisable, and that it should be based on a reasonable standard of life, but would have to vary in different areas.

It was also agreed that during the period of demobilization it would be better to institute a system of part-time work, so that the whole of the workpeople should be employed for part of the day, or part of the week, rather than that some should be employed full-time and the rest turned out on the unemployment market. It was anticipated that this period would be only temporary, and ultimately all would be re-absorbed.

Dissatisfaction was expressed at the delay in the production of definite and coordinated plans by the Government, and the conference agreed to meet again, either to consider the Government's demobilization proposals, or, failing that, to formulate its own on the nearer approach of peace.

WORKING CAPACITY AND WAGES OF WOMEN.

MR. KELLAWAY'S REVIEW.

Mr. KELLAWAY, Parliamentary Secretary to the Ministry of Munitions, addressing the Women's Liberal Association at Bedford yesterday, said one of the unexpected sides of the war had been the limelight that had been turned upon women. In 1914 there were a quarter of a million women in the great industries that were peculiarly munition trades; over 100,000 were engaged on metal work and engineering, and 15,000 handling explosives or in the chemical trades. It was largely these women, who were there in the factories, who poured into the munition works. If it had not been for this factory-trained population, able to work long hours and handle machines and to impart their tradition to the newcomers, the task of replacing men by women might have been insuperable. Neither what had been done for women during the war nor what they had achieved for themselves would be realized until it was thoroughly understood that their average wage before the war was 10s. a week.

Into the women's trades the Ministry of Munitions had to bring two new women for every one who was there before the war. Over against them were the trades closed to women, where men doing work by no means always heavier or more difficult were paid two or three times, or four or five times, what any woman could hope to earn. Into these trades, too, the Ministry had been forced to pour nearly half a million women. And the men whom the women had replaced said that they should not come if they came as cheap labour, cutting the rate for the job. That was the double problem—to secure a living wage for the women without utterly ruining every women's trade in the country, and at the same time to put women on to men's work at rates that would fulfil the Government's pledges and secure the consent of the men. It had not been easy to do both these things at once.

In the munitions trades proper, the pre-war women's wages of 10s. or 11s. have risen to about 35s. for the same number of hours, and at the same time the whole factory life of women was being slowly changed. Their hours were being shortened, their health was watched over, and where possible decent cheap meals were provided. There were nearly 1,000 canteens now, and new ones were being opened every day. In the great munition centres hostels had been opened and recreations provided. New machinery and new processes had been invented that had altered the very basis of production. Work that was too heavy had been lightened and broken up until it could be done without injury to the workers.

FROM A STARVATION TO A LIVING WAGE.

In three years women in this country had been lifted from a starvation to a living wage. It was more than could have been hoped for in 50 years of peace. They had been called extravagant, careless of public money, and reckless in their ignorant interference with trade. The apparent increase of 25s. on 10s. was not all real. There was the falling value of money to consider. The wages of women had gone up a little, but prices had gone up more. They believed that the women were worth what they had been given.

On the other hand, it was stated that, while they were extravagant in paying from 30s. to 35s. to women in women's trade, they were tricksters and sweaters for not paying the whole of a man's wages to any woman who might be put on to his job. A War Cabinet Committee was now sitting to decide how much of a man's work a woman could do and what proportion of his pay she should receive. It would also decide whether the pledges which had been made had been kept. The women came into the shops untrained and dependent on the men there for their teaching, and these men did not welcome the idea of an ignorant and useless newcomer receiving the wages that the men had only reached after years of work and experience. In most cases the women could not do the same work as a man, where strength was required. Experience seemed to show that five women were worth roughly three men. Where knowledge and skill were required a woman would learn very well one particular job, but she would not spend time learning her work as a whole, so that she could not be of the same general use as a man who could turn his hand to anything. Then in many occupations women were on the whole slower than men, so that they were a more expensive form of labour. They also needed better and more expensive factory conditions. Finally, they were a far less permanent form of labour. Out of every 100 munition workers 60 left their jobs before the end of the first year, and 13 before the end of the first month. Only four out of every 10 completed their year.

These and many other facts about women's labour must be borne in mind when answering the apparently simple question, "Should women have equal pay for equal work?" The answer was, "Of course they must, if they do the same work as the men, of the same quality and of the same amount, with the same expense to the employer for supervision, and for what I may describe as overhead charges." There were certain conditions which should govern woman's position in industry after the war. Her labour must not be used to enable the employer to make larger profits than he would make if he employed men; it must be of a kind which she could perform without injury to her physical health. He believed there was a great future for women in industry. Their productions after the war would do much to repair the ravages that war had made. The need of production would be so supreme that there would be work not only for every soldier when he came back, but for many of the women who had taken their places. But the claims of the returned soldier must come first.

WOMEN'S CLAIM TO EQUALITY.

The National Union of Women Workers, meeting at Harrogate yesterday, decided to change its title to the National Council of Women of Great Britain and Ireland. Resolutions were passed pressing for the removal of all restrictions debarring women from becoming members of professional corporations and trade unions; urging the abolition of regulation 40 D; and calling for equal pay for equal work, and equal status in professions, business and industry for women. At a meeting of the Women's Patrols Committee it was stated that there was a definite prospect of the appointment of permanent women police.

Reconstruction Demobilisation

Daily Express 24/10/18

FROM KHAKI TO CIVIL LIFE.

GOVERNMENT READY FOR DEMOBILISATION PROBLEMS.

THE WOMAN WORKER?

"Daily Express" Lobby Correspondent.

The enormous problems of demobilisation—the placing of millions of soldiers and war workers, men and women, back in civil life—will not find the Government unprepared.

First, troops at the front have to be dealt with. Order of possible re-employment will be the determining factor in deciding the release of men from the front. Those in "key" trades—that is to say, trades on the starting of which other trades depend, will come first, and within these limits preference will be given to married men and to cases where singular hardship prevails. Obviously, therefore, a complete restarting of the railways is probably the first step towards proper demobilisation.

It is reasonable to assume that railwaymen will be demobilised first, as well as men for the transport trades generally. Miners, also, are engaged in a "key" enterprise in this sense, and the whole order of demobilisation is now ready, from the railwayman down to the travelling tinker.

To mention all these trades in their order would give rise to much unnecessary controversy. This will, no doubt, come in due time. With regard to the release of men whose case deserves special consideration, a certain discretionary power is to be given to the commanding officers, who may inquire into the private means of their men.

Another and important factor affecting trades generally will be whether the man has a job to go to. Dr. Addison declared some time ago that over a million soldiers had their old posts or new posts open to them on their return to civil life. The up-to-date estimate is that 60 per cent. come within this category. This is an enormous benefit to the departments in arranging demobilisation, but even these men cannot take precedence over the groups of pivotal men wanted more urgently in industry.

COLLECTING CAMPS.

These men will, according to the order of their demobilisation, be collected in what are called the collecting camps in France, and brought down to the coast in parties. Their transport to England presents special problems, but all these have been settled.

On reaching England the men will proceed to the distributing depots. At his depot the soldier about to be demobilised will hand in his kit and receive his allowance for civilian clothes or a suit. In addition he will probably receive his back pay or a certain proportion of it, enabling him to proceed to his home. He will have a month's furlough dating from that moment, which really means that he is drawing his Army money for a month while being entitled to take any job that presents itself.

From this stage of the demobilisation process the Minister of Labour assumes charge of the discharged men. For the task of distributing the labour he will have greatly reinforced means at his disposal and improved administrative machinery, he will have the help of local committees of the employers and the trade unions, all of whom have agreed to co-operate, and lastly he will have the aid of carefully assorted and tabulated lists of jobs open to the soldiers.

At the same time it is not humanly possible for any Minister to compile an exact list, to give any kind of assurance that there are enough jobs to go round, or to secure in return a guarantee that the men, without exception, will take the posts arranged for them. Those who are coming home to definitely arranged posts will, however, run into such large figures that the problem of what to do with the rest will be greatly simplified.

A CONUNDRUM.

The pre-war apprentice is a conundrum all to himself. He was eighteen when he joined; he comes back at twenty-two, a man, but still in his apprenticeship. That problem has been settled in part by the Government. The suggestion is that he shall be paid a minimum wage during the time that he is completing his apprenticeship—a wage considerably higher than he would have received as an apprentice. Obviously it is essential for the good of the community that he should complete that apprenticeship as thoroughly and as quickly as possible. There must also be, and indeed there are in being, elaborate schemes for the reorganisation of juvenile and adolescent labour.

Then there are women to be thought of, millions of them. The official calculation is that if every woman who gave up a job to take on war work—I refer to wage-earning posts—goes back to her old work there will still be 500,000 women without jobs on the old basis of employment. Emigration has stopped, and as emigration used to absorb a large number of women, that has added to the difficulties.

A great number of women workers will, no doubt, go back home to keep house for their menfolk, and others will emigrate. There will still be hundreds of thousands of women who want to continue earning their living even if they cannot always have war wages. For these no openings exist, but a Woman's Employment Committee has been set up by Dr. Addison at the Ministry of Reconstruction to advise on the problem. That committee has not reported, but it has been considering a number of schemes which promise to help tremendously in the settlement of the problem of unemployed women. One scheme will relate to the public services, another to the banks, another to clerical service generally, and so on.

RAW MATERIALS.

Much of the success of all these proposals—indeed the whole question of how far there will be jobs for discharged soldiers—depends on the supply of raw materials. Careful surveys which have been made by the Government as to the amount of material which will be available reveal a pretty good position. It is largely a matter of shipping to bring the supplies home. The Shipping Ministry has reported that the tonnage problem will not be so disheartening, for Britain, at any rate, as some have foreshadowed.

All the experts say that there will be plenty of work for the men. The private firms must get ready for peace as best they can, especially in the turning over of shops from war to peace work. How quickly this process can be done will depend largely on the foresight of the individual firms, some of which are having alternative parts made for their machines. Such preparations are well advanced in a large number of cases. Firms are overwhelmed with post-war orders both from home and abroad. There are hardly any commodities or articles of any kind of which the stocks are not terribly reduced. The firm which will get the full advantage is the one most ready to reorganise on peace lines.

New industries will spring up everywhere. Before the war we imported large quantities of foreign goods, particularly machinery. We shall not do that again on such a scale. A committee has been and is still sitting on engineering questions alone—twenty separate commissions, indeed, examining twenty different branches of engineering, and all trying to discover new manufactures for this country. In consequence of the experiments plans are already laid for a series of manufactures never previously attempted in this country.

E. J.

Women in Industry.

One of the chief problems that will have to be faced, after the war is the position to be occupied by women in industry. To some it appears that the problem will be a very acute one and that out of it a great deal of trouble is likely to arise. For our own part we are rather inclined to the opinion that this, like many other problems arising out of the change of conditions brought about by the war, will have a strong tendency to right itself automatically. The general question has been discussed at a conference between women and employers of labour, arranged by the National Alliance of Employers and Employed. The first question discussed was whether the one and three-quarter million women who, in addition to the three millions in industry before the war, now compose the women's industrial army, can be retained in industry after the war. It was first of all pointed out that there was first to be considered the pledge of the Government to the trade unions that the men should all go back to their old employment, and that pre-war conditions should be reinstated in industry. There was also the extreme difficulty of the conversion of the factories from the production of war material to the needs of peace, and there was the further problem of obtaining the necessary raw materials so that there should be no break in the work. It was realised by the conference that the Government must fulfil its pledges, but that these could not be held to apply to new industries or to extensions of old which have led to the employment of greater numbers of workers as compared with pre-war figures. Then the critical question of wages was discussed, and the conference was unanimously of opinion that a minimum wage should be fixed, based on a reasonable standard of life, which would have to vary in certain districts. It was also agreed that during the period of demobilisation it would be better that a system of part-time work should be instituted, so that the whole of the workpeople might be employed for a part of the day or part of the week rather than that some should be employed full time and the rest turned out on the unemployed market. The question of equal pay for equal work, although one of the most important of all, does not appear to have been touched.

We confess we are not quite able to discern where it all leads. It does not seem to help much to sit down and discuss academic questions and pass pious resolutions. As we have already remarked, the question at large is one that will in very great measure settle itself without undue interference. The women who are now engaged in war work may be divided into three categories. The first includes all those who are working now, not because of the necessity of earning money, but in response to the patriotic impulse. They do not want to continue, and will drop out of the problem with the closing down of the war effort. What proportion these bear to the whole we cannot say. Probably it is a relatively small one, but that is as it may be. Secondly, there are those who are not particularly fitted for industrial work, but who have been taken in because the national need was too great for any offer of help to be ignored. Most of these are frankly in it for the higher wages they can command in comparison with their former occupations and the greater freedom of movement they obtain, as, for example, the huge numbers of women who have passed from domestic duties to munition factories. A very large number of these will automatically drift back to their old occupations when things are finding their level and enormous wages are not to be obtained. The third category includes those who would have taken to industrial work in any case, or who find in it an alternative to early marriage and what they consider dependence. Most of these will undoubtedly stay, but they will not constitute a surpassingly difficult problem. Unfortunately we have lost outright something like a million of our best men, while another large proportion have been disabled past any possibility of resuming their old employment. In addition, there will be still a further number who, after the open-air life of campaigning, will not care to settle down to sedentary pursuits and will seek a new life in the Colonies. By the time, then, that we have accounted for these it begins to look as though industry will with ease be able to absorb all the women workers who will want to say in it, and it seems at least a little premature to waste time in the discussion of problems which are not likely to arise in an acute form. It would seem to us that the great problem that will have to be met is not so much the one of whether women can be kept in industrial life, as the precise position they will occupy in it, and this is one which the conference does not seem to have debated at any length.

Mr. Kellaway, Parliamentary Secretary to the Ministry of Munitions, dealt with this side of the question, which is really the only one that matters much, in the course of an address to the Women's Liberal Association at Bedford. After reviewing the changes in industry which had come about as a result of the war, he went on to say that it had been said the Government, while they were extravagant in paying from 30*s.* to 35*s.* to women in women's trades, were tricksters and sweaters for not paying the whole of a man's wages to any woman who might be put on to his job. A War Cabinet Committee was now sitting to decide how much of a man's work a woman could do, and what proportion of his pay she should receive. It would also decide whether the pledges which had been made had been kept. The women came into the shops untrained and dependent on the men there for their teaching, and these men did not welcome the idea of an ignorant and useless newcomer receiving the wages that the men had only reached after years of work and experience. In most cases the women could not do the same work as a man, where strength was required. Experience seemed to show that five women were worth roughly three men. Where knowledge and skill were required a woman would learn very well one particular job, but she would not spend time learning her work as a whole, so that she could not be of the same general use as a man who could turn his hand to anything. Then in many occupations women were on the whole slower than men, so that they were a more expensive form of labour. They also needed better and more expensive factory conditions. Finally, they were a far less permanent form of labour. Out of very one hundred munition workers sixty left their jobs before the end of the first year, and thirteen before the end of the first month. Only four out of every ten completed their year.

These and many other facts about women's labour must be borne in mind when answering the apparently simple question, "Should women have equal pay for equal work?" The answer was, "Of course they must, if they do the same work as the men, of the same quality and of the same amount, with the same expense to the employer for supervision, and for what I may describe as overhead charges." There were certain conditions which should govern woman's position in industry after the war. Her labour must not be used to enable the employer to make larger profits than he would make if he employed men; it must be of a kind which she could perform without injury to her physical health. He believed there was a great future for women in industry. Their productions after the war would do much to repair the ravages that war had made. The need of production would be so supreme that there would be work not only for every soldier when he came back, but for many of the women who had taken their places. But the claims of the returned soldier must come first.

There is very little that need be added to Mr. Kellaway's expression of opinion, which is that of every unprejudiced observer. It is here, in the decision of what is and what is not "equal work," that the real problem in connection with women's work in industry will arise, and not in the question of whether or not women will remain in industrial life or in what numbers.

October 1918

Iron & Steel Trade Review, 18.10.1918.

Women Workers after the War.

Demobilisation is in sight, as Viscount Grey might say, even if it is not yet within reach, and events have been moving so fast, and so splendidly for the Allies, that it may be upon us at any moment. Whether the country is ready for demobilisation is doubtful; perhaps complete readiness should be ruled out as unattainable, since so much depends upon the terms of peace. There is no doubt that hundreds of thousands of men can be absorbed straight away in such trades as coal-mining, farming, or building; but there are other trades where the places of enlisted men have been occupied by women. What will happen in these cases was discussed last week at a Conference between trade-union women representatives and employers of labour, which had been arranged by the National Alliance of Employers and Employed.

The Conference—or its chairman, Mr. F. Huth Jackson—began by discussing the position of the 1,750,000 women who have been added to the pre-war total of three millions in industry. That this army, which has worked so well for us during the war, cannot be summarily disbanded with thanks and a gratuity is obvious enough. A small proportion, mostly well-to-do women, will thankfully retire to less strenuous activities; a larger proportion will resume domestic duties as the wives of returning soldiers; a still larger section will go back to their pre-war occupation in other industries. What the rest will do, or how numerous they will be, is not clear. In all reconstruction schemes the claim of the returning soldier to his old job, or to any other job which is open and within his capacity, must be paramount. The Conference discussed the Government pledge to reconstitute trade-union conditions as they prevailed before the war, but it came to the conclusion that the pledge does not in any way apply to new industries (such as the dyeing trade) which have been created during the war, or to the extension of old industries which have absorbed a larger number of workers during the war than they used to employ. It seems to have been the opinion of those present at the Conference that there will be a temporary period of dislocation after the signing of peace, during which the whole community will have to be patient and work on a give-and-take basis. They reckon that ultimately there will be work for all, so that every woman at present in industry can be retained if she wishes to continue. This is an optimistic conclusion.

Much depends, Mr. Huth Jackson said, on the rate of demobilisation. If it proceeded at the rate of 50,000 a week it would take two and a half years at the least. Surely this is an absurdly low estimate! As soon as the submarine menace is removed and our ships can move freely, transports will steam rapidly from French and Belgian ports to all the chief ports of England and Scotland. We should have thought that 50,000 a day would be a poor total; yet the report of the Conference states that 50,000 a week would be "a very high figure, seeing that four-fifths of the men will have to be brought from abroad." No doubt the repatriation of our troops from the Balkans, Egypt, Mesopotamia, and Palestine will be a lengthy business, but from France and Flanders the matter ought to be simple enough. With men on the Western front the real problem will be to decide which men shall come home first. There will be great discontent if miners and so on are brought back to earn 10s. to 15s. a day, while other men in the same battalions are kept under military discipline at 1s. 6d. a day. The Government may find it necessary to raise the pay of the English soldier to the 4s. or 5s. a day which Colonial and American troops have been receiving during the war. The necessity for paying "a living wage" to soldiers will not be altogether an economic evil. If it can be extended to the Continental countries it will make their Governments more ready to consent to smaller armies. Had the German Government been forced to pay 5 marks a day to its conscripts, the German taxpayer would not have yielded so readily to the demands of their War Minister.

On the practical point of what shall be done to find employment during the period of demobilisation, the Conference came to the opinion that it would be better to institute a system of part-time work, so that all workpeople may be employed for part of the day or part of the week. This is not unlike the method adopted in the cotton trade; short-time working has been voluntarily imposed for some weeks past in consequence of the shortage of raw cotton, and now we read that the Cotton Control Board has decided to stop all looms throughout the week beginning October 21. During the week the operatives receive full pay. When it is a question of unobtainable raw material a general short week seems the best plan, but it is not clear that the National Alliance was thinking only of trade which cannot get full supplies: it looks as if the Conference had some leaning towards the fallacy of a fixed amount of work to be shared out equally. As we have said constantly before now, each man or woman who works helps other men and women to find work.

Speaking on the same day as the Conference met, the Financial Secretary to the Ministry of Munitions, who may be regarded as the chief wage-payer in the world, said that women workers during the war had been "lifted from a starvation to a living wage." Mr. Kellaway warned them that the formula of "equal pay for equal work" was being advocated by some people who "wanted to see women out of industry." Curiously enough, a third gathering, on October 9, was also discussing the conditions of women workers after the war. At a meeting of the National Union of Women Workers a resolution was adopted demanding the removal of all restrictions which debar women from becoming members of professional corporations or Trade Unions. A second resolution advocated equal opportunities and training and equal remuneration for equal work. Lady Frances Balfour stated that the principle of equal opportunities "was more important than that of equal pay."

WOMEN'S WORK IN ENGINEERING.

In an address delivered before the Conference of the National Union of Women Workers, on October 8th, Mr. Ben. H. Morgan stated that throughout the country there were no fewer than six millions of women employed on works of various kinds. Approximately, a million women were employed on munitions work in engineering and allied trades. This was the great new departure of the war—one million women suddenly projected into a highly technical industry, requiring on the one side a large measure of knowledge and skill, and on the other the utmost physical endurance. These women were producing no less than one-third of the total output of munitions. There were thousands of women engaged on turning operations which involved a considerable measure of skill, some working to 1/1,000th of an inch. Many of these women set up their own work and tools, and ground their tools. They not only did plain turning, but non-repetition work direct from drawings, some, again, working on pieces with seven or eight measurements, practically all using gauges of various kinds, and many using micrometers. While many had acquired a large measure of skill, extremely few could be regarded as skilled in the same sense that men were skilled after having served an apprenticeship to the trade.

In fitting, women had not been so successful as in turning, but nevertheless very large numbers were employed on subdivisions of what was regarded as skilled work. Women were doing all ranges of drilling work; this was a line of work in which women had been as successful as men.

In milling, shaping, slotting, and planing women were executing a great deal of work, and many were capable of setting up in the machine and carrying out a wide range of simple jobs from working drawings. The war had not, however, produced a skilled woman miller or planer. In planing the setting-up was nearly always done by a skilled man, and the woman acted as a machine minder.

Women had made exceptional progress on the marking-off table, reading the most complicated drawings, and using measuring instruments with much greater facility than the average male apprentice. Women had made excellent tracers, and in some cases could piece drawings together, but there were no women draughtsmen at the present time. Acetylene welding was a branch in which women were eminently satisfactory. Women were specially capable of being trained in woodworking, and in the operating of woodworking machines. They were also doing extraordinarily good work in the laboratory as assistants in research work; in the testing room, testing metals, instruments, and engines; in the smithy, the forge, and all kinds of metal-shaping and heat-treating work.

What part were they going to play in our premier industry after the war? There was no more serious question than this for the National Union of Women Workers to consider. Women had opened up a vast field of activity which they should never again relinquish. When peace came, bringing with it the demobilisation of our armies, men would very justly wish to resume their places in the engineering factories of the country. But when this position had been liberally and generously dealt with, vast opportunities would present themselves to women in both the trade and the profession of engineering.

The conference should carefully examine the work which women had done, and estimate what special branches of engineering women should be encouraged to persist in after the war. In some branches of work they were as good as men in both quality and output; in other branches they were superior to men in both respects, while in a large number of other sections of work they were inferior to men, and in peace time they should be discouraged from pursuing any operation in engineering practice that was unsuitable to them.

Liverpool Weekly Post. 26.10.1918. 703/8

The Labour World.—By Gray Quill.

War Work, Women, and Demobilisation—Joint Committees and Ministry of Labour.

The dockers, I am told, have accepted the new award, so that we are assured of peace in the transport industry for some time. All the same, Mr. Harry Gosling and the executive of the National Transport Workers' Federation are vigilantly watching the development of the plans for demobilisation, which one of the shrewdest judges in the kingdom says will begin about Easter.

Allotment-holders in Liverpool have won a remarkable victory over "Dora" and the War Office, who wanted to take the land on which certain Liverpool workmen during the last two years have expended so much money, energy, and brains. Mr. John Williams, of the Stewards' Union, who is also secretary of the Liverpool and District Federation of Allotment-holders, by his courage, tenacity, and ability, has earned the well-deserved gratitude of allotment-holders throughout the kingdom.

The woodworkers of Liverpool are in a very restive mood just now on the bonus question, and they indignantly repudiate a report that they are not contemplating a strike if their terms are not conceded.

The question of a strike of panel doctors was discussed at the British Medical Association's annual conference of representatives of local medical and panel committees. That the position of the rural panel doctor is not too good is admitted, but his town confrere is "on velvet"; and one can endorse the opinion of Dr. J. R. Drever (Glasgw), who said that if a strike were proclaimed, they would not get the support of 1 per cent. of the panel doctors.

TRADE UNIONISM AND RECONSTRUCTION.

Mr. G. H. Roberts, M.P., Minister of Labour, speaking in London, ably dealt in the course of his speech with the establishment of joint committees of employers and of trade union officials to advise the Ministry of Labour in regard to industrial matters, and said he thought he could claim that the Ministry of Labour had been foremost in developing the new principle, or rather a principle which was now becoming acceptable to the people as a whole—namely, that of decentralisation. The experiment of bringing together representatives of employers and the workpeople to assist the Ministry in their work had, so far, been attended with gratifying results, and in that fact there lay a great hope that one of the greatest problems of reconstruction after the war would be the better dealt with.

After the war, the building trade industry was going to be one of primary importance. A lot of leeway had to be made up. Above all, the public conscience had been aroused during the war, and housing in which people might have acquiesced in pre-war times was not going to be tolerated in the future (hear, hear). The need everywhere was urgent, and it was up to the building trade to co-operate with the national and local authorities to see to it that the houses were supplied, and that they were of a character worthy of the race that had acquitted itself so splendidly during this supreme test.

To this statement may be added these details:—There will be a Government loan of at least thirty millions to municipalities and private builders for the rehousing of the people. The shipbuilding industry will be working day and night; the coal industry will be at its busiest.

WOMEN CITIZENS AND THE SKILLED TRADES.

At the inaugural conference of the Liverpool Council of Women Citizens, Miss Eleanor Rathbone said that women would never go back to the leper compound of unskilled trades they occupied before the war. They had proved the right to a place in skilled industry, and it was a grave problem of how, after the war, full justice was to be given to every man who had given up his job to go to the front without placing women once more into the fetters they had shaken off.

Miss Rathbone may rest assured that an iron law called necessity will settle this, as well as other matters, after the war is over. Those men who are physically fit to go back to their skilled jobs will start work once more without placing fetters on any woman war worker. As a matter of fact, there will be more than enough work for everybody during the next twenty years. We shall have a large army of maimed men, fit only for light work; the labour market will be minus the deathless army of the men who died that the world might be free. Fifty per cent of woman war workers will go back to their homes to nurse their children and take their natural sphere in home life; a large number of women, through overwork, will be compelled to lie up and rest; a large number will marry. It follows that, in a world which will have to be rebuilt, there will be plenty of work for those who are left.

So far as the women M.P.'s are concerned, I do not anticipate sex rivalry for political power. Neither this nor any other generation is likely to see a Ministry composed solely of women. There are obvious reasons against it. Nor can I imagine a large number of women members of Parliament, for the odds will always be against them, so long as there is not complete unity amongst their own sex. In other words, I see no reason to change my belief that the next Parliament will be filled mainly with representatives of Labour and ex-service men.

OVER 46,000 MINERS RETURNED TO THE PITS

Sir A. Stanley announces that 26,910 coal miners have been released from the Army since May 1, 1918, and have reported at the mines. In addition, about 20,000 have been released and have reported since August 1. About 300 have been released from the Navy and the Air Force.

ITEMS.

Dr. Macnamara assured the House of Commons that all the shipyards were at the moment provided with all the unskilled labour which could be utilised under present conditions and with the necessary materials, but there was a shortage of skilled labour in certain trades and districts.

Mr. A. G. Walkden, the general secretary of the Railway Clerks' Association, is seriously ill with 'flu.

The Operative Cotton Spinners and Card-room Amalgamation, at Manchester, made a joint application to the Federation of Master Cotton Spinners for a 40 per cent. advance of wages, the new rate to come into operation in December. One hundred thousand operatives are affected.

MISSING SOLDIER.

Rifleman J. E. Jennings, No. A/203136, K.R.R.C., Attached M.G.C., B.E.F., France. Missing since March 21, 1918. Inquirer, his wife, Mrs. J. E. Jennings, of 11, Battersby-street, Higher Openshaw, Manchester, who would be glad to hear news from any soldier who saw her husband about the date named.

WOMEN IN THE DRAWING OFFICE.

To the Editor of Engineering.

Sir,—In your issue of October 18 appears an account of the National Conference of Women, and in the account occurs a remark from a Mr. Ben. Morgan, who spoke as one having authority (from the Ministry of Munitions), and gave the benefit of his experience to the assembled ladies. The remark is to the effect that "women are specially suitable for such *semi-skilled* operations as tracing, and *draughting*." It is possible that the rest of Mr. Morgan's speech was accurate and reliable, and as the apparent object of the conference was to indicate to the ladies the departments and processes of industry which held out the best prospects for their employment, I am sure Mr. Morgan will not object to a correction.

Therefore, ladies, be not misled. You are as welcome to the drawing office as you have been to the shops. Many of you have been there for years—tracing—and you have done the work moderately well: I can say no more. You will be employed willingly enough as draughtswomen when you are capable of supplanting draughtsmen, and if you organise yourselves properly you will perhaps earn as much money. Do not, however, let this golden dream of Mr. Morgan deceive you into believing that you can command the princely salaries paid to draughtsmen in the short space of time that "semi-skilled" would seem to promise. Rather, make up your minds for years of hard preliminary work. For days spent in the shops and nights in the technical classes. Look up your mathematics, your mechanics, your geometry. Be sure that you will have to know something of most engineering processes, from pattern-making to freightage, and a variety of matters there is no space to enumerate. And then, after having thoroughly ascertained what you will let yourselves in for, ask yourselves whether there is not some equally well-paid, semi-skilled job among the Ministry officials that would be more to your purpose.

And may I deferentially suggest, Sir, that the next time Mr. Morgan undertakes to give advice he gets his particulars of drawing-office work from No. 8, Victoria-street, S.W. 1, which is the Head Office of the Association of Engineering and Shipbuilding Draughtsmen, where fully-skilled information may be obtained free, gratis, and for nothing.

Yours faithfully,

Ernest H. Walker
(Chairman, National Executive).

61, Claverton-street, S.W. 1, November 4, 1918.

November 1918.
Reconstruction
5. 11. 1918.
Nottingham Leader.

70

A NEW WORLD.

Mr. A. Richardson and Reconstruction.

LAWS AND LANDLORDS.

Mr. Arthur Richardson, M.P., Liberal candidate for West Nottingham, last night addressed a well-attended meeting in the Nottingham-road Schools. Dr. Fulton presided.

"I am not a prophet nor the son of a prophet," said Mr. Richardson, referring to the war, "but I believe that with Bulgaria, Turkey, and Austria out of it, the struggle will not last many weeks longer. At least I hope we shall have the pleasure of eating our Christmas dinner in peace." (Applause.) In any event he hoped that no stone would be left unturned so far as they were concerned in making this country the Merrie England they all wished to see when the boys returned. (Applause.)

Milestones Left Behind.

Turning to the subject of reconstruction, Mr. Richardson said he hoped to see the new earth built upon the principles of equality, justice, and fraternity. (Hear, hear.) Reviewing the position that obtained prior to the creation of the Parliament of 1906, Mr. Richardson said the Franchise and the Education Acts of the seventies and the eighties were really responsible for the workers being able to make their voices heard in the House of Commons at that time. As the result many beneficent measures for organised labour were placed on the Statute Book, but whether Labour or Liberals were in power after the next general election much remained to be done. In the forefront would have to be placed the reform of the Poor Law and the workhouse as to-day we understood it. (Applause.)

An extension of the principle of the Wages Boards established by a Liberal Government would also have to be provided for in the near future. (Hear, hear.)

Demobilisation difficulties would be tremendous, both in regard to the return of the men from the front and their replacement in civil life. "We must see that the public purse in this respect is not used stingily," emphasised the speaker amidst applause. It was not the fault of the fighting men that this country went to war, and the State must deal generously with them until such time as normal conditions again prevailed. (Applause.)

Land Laws and Landlords.

Touching on the housing problem, Mr. Richardson said the difficulties in the past had been accentuated by land laws made by the landlords. (Laughter and applause.) In future the people must be considered first. Recalling what took place when the Derwent Valley Water Board was formed—land, he said, was offered Nottingham, Sheffield, Leicester, and Derby at treble the price it was subsequently bought for—Mr. Richardson instanced building sites in the city, for which, he said, an exorbitant rate was being demanded. His contention was that instead of £600 or £700 per acre, this "ducally owned" land ought to be sold, if the Corporation required it for housing purposes, at the £100 per acre at which it was valued for rating purposes. (Applause.)

Turning to the liquor question, Mr. Richardson said he hoped to see many of the licensing restrictions now in existence as a war-time measure become permanent.

Women and Equal Pay.

Increased maternity benefits should, he thought, be granted. (Hear, hear.) As to the demand made in certain quarters for equal pay to women for equal work, Mr. Richardson said he agreed, if it was intended that the wages should only be paid where women did the same class of work in the same time as men. On the other hand, there were industries in which women could not and ought not to be expected to perform a man's task. That being so, he thought the women would be well advised to qualify their demand for equal pay for equal work along the lines suggested. (Applause.)

Review of the Week.

Employment of Women in the Machine Tool Industry.

We have received a copy of a statement, prepared by Sir Alfred Herbert, K.B.E., Chairman of the Machine Tool and Engineering Association, on the Employment of Women in the Machine Tool Industry, which has been submitted to the War Cabinet Committee on Women in Industry. Sir Alfred prefaces his statement by referring to his being a large employer of labour, male and female, for three years at the Ministry of Munitions as head of the Machine Tool departments, during which period he has been in close contact with many questions arising out of the employment of Women in the industry.

He suggests, with great respect, that there is a disposition on the part of the Government departments and Committees to collect a large amount of detailed information on any particular subject under investigation, and the mass of information thus obtained, coming, as it must, from so many sources, is extremely difficult to digest. My notes may be more helpful if I refrain from going too closely into the detailed points outlined and confine myself to a more general statement of my views, based on the experience to which I have already referred. Sir Alfred in ten paragraphs sets out his views, which are of interest and value; the first two are of a further explanatory character, and conclude with the assumption that the War Cabinet are deliberating on the framing of recommendations; which as an ideal should bring about the following results: The maintenance of the Engineering industry in a condition of maximum profitable activity, the employment in that industry at fair and adequate wages and under healthy and harmonious conditions of the maximum number of male workers; the employment in that industry on work within their capacity of such numbers of women workers as the demand for additional labour may render necessary, and under such conditions in which they are protected from unduly low wages, and from possible injury to their health. The remainder of the statement is devoted to the main question, the Employment of Women in the Machine Tool Industry. It is far too lengthy for us to reproduce in these columns, but Sir Alfred, after apologising for their length, summarises them as follows:—

> There will undoubtedly be scope for the employment of a considerable number of women after the war in mechanical industry, particularly on work of a simple and repetition character.
>
> That this employment on any large scale will be possible if the wages paid to women are economic and not artificial.
>
> That the economic earnings of women, in common with the economic earnings of men, and also the general prosperity and well-being of the community, will increase if output be unlimited, but will stagnate if output be restricted.
>
> That women can in the future take an important part in mechanical production only if a good understanding is arrived at with Trade Unionism.
>
> That the nature of the work on which women are to be employed in the various industries must be limited only by their capacity, on the one hand, and by such restrictions as are necessary to preserve their health.
>
> That to prevent exploiting or sweating no reasonable employer would object to the fixing of a minimum wage or of maximum working hours.

We will only make one further reference to Sir Alfred Herbert's carefully and well-considered statement, and that is upon the difficult question of wages. He says: "Regarding the rates of wages to be paid to women, it will be admitted that the present rates are artificial and not economic, that they have been rendered possible only by the fact that war conditions are artificial and not economic, and when peace comes artificial conditions will very largely be swept away and industry can prosper only to the extent that the conditions under which it is carried on are economic also. Wages, whether of men or of women, cannot economically continue at a level which does not permit the industry employing them to carry on its business at a profit. They can be raised only by greater production, on the one hand, or, alternatively, by the imposition of protective tariffs on the goods produced, or by Government bounties. No industry can continue to employ labour indefinitely at a loss."

Morning Post -

WAR PLEDGES TO WORKERS.

FUTURE OF WOMEN.

(From Our Special Correspondent.)

BIRMINGHAM, Thursday.

My previous contribution broke off in the middle of the conversation with Mr. W. J. Davis, the Secretary of the National Society of Amalgamated Brassworkers. I had asked him when the real jolt would come, to which he replied: "I regard the first eight weeks after the war as the critical period. I have no doubt that history will repeat itself. When war was declared in August, 1914, manufacturers simply collapsed. They did everything they could to induce their workmen to join the Army and fight the Germans, promising that their places would be kept open for them, and in many instances their wages would be paid. A few weeks later when contracts came pouring in many of these same manufacturers regretted that they were so patriotic; and ever since then trade has been booming.

"I agree with the paragraph in the *Morning Post* article that distribution of material is a great problem, and I agree with the appointment of committees as suggested, and that material should be allocated in proportion to the number of people employed and the amount of material supplied to manufacturers. Such industries as the brassworkers and metal mechanics should have such a committee, and as the men are practically all now in the Trades Unions this would necessitate every manufacturer belonging to his Association. What would be done with the brassworkers and metal mechanics could be done with other industries. This work could be much better done by these separate committees than by a general committee even though the different industries were represented on it.

The Pledge to the Unions.

"With regard to the return to pre-war conditions on which the Government gave a pledge to the Trades Unions, that is a very difficult question. Events have moved very rapidly since 1914, and there are now some things that the workmen would not have restored, just as there are some things the employers would not like restored. The workman has adapted himself to the new conditions, and so long as his wages or his piecework prices are not interfered with he would not mind working three days a week instead of six if work was short. As a matter of fact, he would sooner work three days because he would get nearly as much under present piecework rates as he did for the week under his old day rate, and there is a consensus of opinion that the principal employers in the country are anxious not to reduce wages if they can possibly be maintained.

Displaced Women.

"As to women workers we have agreements with the employers that when the male brassworkers return if there is not sufficient work for the men to do the women must go first. Many of those women were kept by their parents before the war and did not go out to business at all. A large proportion of them are married women whose husbands are in the Army, and naturally when their husbands return these women will go back gladly enough to their homes. Many of them have entered the factories from patriotic reasons; they do not want to remain there permanently, and it is in the interests of the nation that the women should return to their proper sphere of life, which is the home. But even if it came to a choice. If a soldier comes back to the factory and finds a woman in his job, he has a wife and children, whom are you going to consider—the girl who has no husband or the man who has been serving his country and who has a wife and little children at home?"

The question with which Mr. Davis concluded served as an opening inquiry of another authority whom I consulted.

"Women and girls," was the answer, "constitute an even greater problem than the men. Will they go back to domestic service? Many may. Others, having tasted what they are erroneously pleased to call freedom, will not. One difficulty is that there will not be the same number of situations open to them as in pre-war days. People who kept half a dozen servants now manage with two or three, and it is highly improbable that they will ever fill the servants' hall quite so full again. The higher cost of living and the increased taxes will necessitate in many houses a continued reduction of staff. As to shop assistants there will be a general return in that direction. No doubt married women serving on the railways, tramcars, and omnibuses will be only too glad to relinquish their occupations on the return of their husbands from the Army and Navy. But when all that distribution has taken place there will still remain a very large number of what used to be termed the weaker sex, for whom the coming of peace with its inevitable dislocation will spell tragedy. That is a social problem both Church and State must grapple with promptly."

Before leaving the labour side of the question let me quote this striking confirmation a manufacturer gave me of Mr. Davis's forecast: "With reference to the return to Trade Union conditions I think the Government ought to keep its promise. Nevertheless I am convinced there are many pre-war conditions that the men themselves will not wish to return to any more than the employers."

Keeping Trade Together.

On the general subject of unpreparedness for peace my attention was called by a gentleman, who, by the way, disagreed with the suggestion of unreadiness, to a speech made the other day at a company meeting. In it the chairman of a large and flourishing motor manufactory stated that in about a week after the declaration of peace they would be able to reconvert their plant to a peace footing, and they had *bonâ-fide* orders on their books which would keep them fully employed for at least two years. Similar conditions prevail, I was given to understand, in what is known as the push bicycle trade, which, with its customary sources of raw material cut off (always excepting supplies for Government needs), has been learning during the last four years the uses of adversity. A great many shifts have been resorted to to make good the failure of the regular steel supply, and heroic efforts have been made to keep the trade going even on a small scale and to maintain a hold on the markets. The industry, indeed, presents a fine example of the unquenchable spirit of the British manufacturer. There must necessarily be a transition period for the accumulation of raw material, but immediately that is available the factories can be turned on straight away to the production of new machines.

The Hat Trick.

Capital and Labour are agreed that, provided the Ministry of Reconstruction acts sensibly by accepting the advice and assistance to be had from them for the asking, there is no reason to apprehend any serious trouble in the industrial world when the war is declared at an end. Their only fear is that the Ministry is unready. There has been no indication of a Government plan, although the announcement to-day of the appointment of a Standing Council on Post-War Priority looks as though something has been moving somebody. The question is: What has Dr. Addison got in his hat—a scheme or a coney? Such public opinion as I have been able to elicit is expecting nothing of more consequence than a rabbit. I wonder what the magician really will produce. Time—and the *Morning Post*—will tell.

PROBLEMS OF RECONSTRUCTION

RAW MATERIALS AND PRIORITY.

ADVISORY BODIES CHOSEN.

The following statement with regard to advisory bodies, other than reporting committees, appointed by the Minister of Reconstruction, was issued yesterday as a Parliamentary paper:—

The Minister of Reconstruction has appointed the following bodies, other than committees required to report on specific terms of reference, to advise him on different aspects of the various problems which come before him:—

1.—THE ADVISORY COUNCIL.

The Advisory Council consists of a panel of men and women of mature experience and distinction in affairs, from whom the Minister of Reconstruction can obtain practical and competent advice on any questions of special difficulty or complexity that may arise in connexion with the work of the Ministry. For working purposes the Council is divided into five sections, each under the direction of a chairman and vice-chairman selected from the members of the Council. The chairmen and vice-chairmen of the different sections of the Advisory Council meet, as a rule, once a week, to advise the Ministry informally on any points of difficulty that may arise in the daily work of the Department, and to suggest convenient methods of machinery for approaching questions of great complexity and importance. An informal committee of women members of the Council, under the presidency of Lady Emmott, will also meet regularly to give the Ministry similar advice in connexion with questions affecting the position of women. The Council is at present constituted as shown below, but additional members will be appointed from time to time as may be necessary in connexion with further developments of the work of the Council and of the Ministry as a whole.

SECTION I. (Finance, Transport and Common Services.)—Sir Charles Metcalfe, Bt. (who has acted as Chairman in the absence of Sir H. Babington-Smith, K.C.B.), Sir Clarendon Hyde (Vice-Chairman), the Hon. Herbert Gibbs (Financial Chairman), E. Husey, Esq. (Financial Vice-Chairman), Sir Alfred Booth, Bt., the Hon. Robert Brand, C.M.G., Sir E. Tootal Broadhurst, Vernon Hartshorn, Esq., O.B.E., W. L. Hichens, Esq., H. J. Mackinder, Esq., M.P., Sir Adam Nimmo, K.B.E., Major the Hon. George Peel, M.P., Sir Alexander Roger, Ernest E. Spicer, Esq., the Right Hon. J. H. Thomas, M.P., Sir W. Rowan Thomson, K.B.E., and Arthur Whitworth, Esq.

SECTION II. (Production and Commercial Organization.)—Sir Henry Birchenough, K.C.M.G. (Chairman), E. Bevin, Esq. (Vice-Chairman), J. P. Boland, Esq., M.P., Sir E. Tootal Broadhurst, H. S. Clough, Esq., Sir Charles Fielding, K.B.E., W. T. Green, Esq., J. W. Hope, Esq., C.B.E., W. H. Hutchinson, Esq., Sir Clarendon Hyde, H. J. Mackinder, Esq., M.P., J. J. Mallon, Esq., Sir Alexander Roger, and W. H. Watkins, Esq.

SECTION III. (Labour and Industrial Organization.)—The Right Hon. J. H. Thomas, M.P. (Chairman), W. L. Hichens, Esq. (Vice-Chairman), Mrs. E. Barton, E. Bevin, Esq., Sir H. Birchenough, K.C.M.G., Mrs. Butler, H. S. Clough, Esq., J. F. Duncan, Esq., Major-General Sir P. Girouard, K.C.M.G., the Right Hon. Lord Gorell, Vernon Hartshorn, Esq., O.B.E., J. W. Hope, C.B.E., Esq., W. H. Hutchinson, Esq., C. A. McCurdy, Esq., M.P., J. J. Mallon, Esq., Sir Thomas Munro, Sir Adam Nimmo, K.B.E., Edwin Orde, Esq., Sir H. B. Rowell, K.B.E., R. H. Tawney, Esq., Miss G. Tuckwell, and W. H. Watkins, Esq.

SECTION IV. (Rural Development, including Agriculture.)—Leslie Scott, Esq., K.C., M.P. (Chairman), Right Hon. Henry Hobhouse, P.C. (Vice-Chairman), C. R. W. Adeane, Esq., C.B., Mrs. E. Barton, Right Hon. C. W. Bowerman, M.P., G. Dallas, Esq., J. F. Duncan, Esq., Lady Emmott, Sir Charles Fielding, K.B.E., Sir Richard Glazebrook, K.C.B., F.R.S., Hugh A. Law, Esq., M.P., T. Lundon, Esq., George Nicholls, Esq., Major Hugh Pritchard, Major-General A. E. Sandbach, C.B., D.S.O., Hon. E. G. Strutt, Miss G. Tuckwell, Mrs. Reginald Wilkins, David Wilson, Esq., and Professor T. B. Wood, C.B.E.

SECTION V. (Social Development, including Education, Health, Housing.)—Arthur A. Allen, Esq., M.P. (Chairman), Lady Emmott (Vice-Chairman), Mrs. E. Barton, Right Hon. C. W. Bowerman, M.P., Sir Richard Glazebrook, K.C.B., F.R.S., the Right Hon. Lord Gorell, and Miss G. Tuckwell.

Women's Advisory Committee of the Council.—Lady Emmott (Chairman), Lady Birchenough, Miss Beatrice Chamberlain, Mrs. Deane Streatfeild, Miss Harris, Miss Susan Lawrence, Dr. Marion Phillips, Mrs. Pember Reeves, Lady Rhondda, Miss Symons, and Miss M. J. Tuke.

ADVISORY COUNCIL ON THE DISPOSAL OF SURPLUS GOVERNMENT PROPERTY.

This Council has been appointed "To consider and advise, under the direction of the Minister of Reconstruction, as to the manner in which all stores, land, and other property (except shipping and Government factories), under the control of Government Departments, being property acquired for the purposes of the present war, and no longer required for the purposes of the Departments under the control of which it is, shall be dealt with, whether by the transfer thereof to some other Department, or by the sale or disposal thereof to other persons." It consists of the following members, together with representatives of the Departments concerned:—

The Most Hon. the Marquess of Salisbury, K.G., G.C.V.O., C.B. (Chairman), Sir Howard Frank, K.C.B. (Vice-Chairman), the Right Hon. W. Adamson, M.P., S. Lowes Dickinson, Esq., Philip Hanson, Esq., C.B., Sir R. Sothern Holland, Bt., W. Lander, Esq., Sir Maurice Levy, Bt., M.P., Captain Sir Reville Stanier, Bt., M.P. and Sir John E. Thornycroft, K.B.E.

ENGINEERING TRADES (NEW INDUSTRIES) COMMITTEE.

This Committee was appointed "to compile a list of the articles suitable for manufacture by those with engineering trade experience or plant, which were either not made in the United Kingdom before the war but were imported, or were made in the United Kingdom in small or insufficient quantities and for which there is likely to be a considerable demand after the war, classified as to whether they are capable of being made by (1) women; (2) men and women; (3) skilled men; and setting out the industries to which such new manufactures would most suitably be attached; and to make recommendations:—(a) On the establishment and development of such industries by the transfer of labour, machines and otherwise: (b) as to how such a transfer could be made, and what organization would be requisite for the purpose, with due regard to securing the cooperation of labour.

The members of the main Committee, together with the Sub-Committees which have been appointed to deal with particular industries, are as follows:—

The Hon. H. D. McLaren, M.P., C.B.E. (Chairman), Charles Bennion, Esq., Sir George Bullough, Bt., F. H. Crittall, Esq., R. Dumas, Esq., Sir John Griffith, M.Inst.C.E., W. B. Lang, Esq., Charles A. Lister, Esq., C.B.E., P. J. Pybus, Esq., C.B.E., G. H. Sankey, Esq., Sir Percy Stothert, K.B.E., John Taylor, Esq., William Taylor, Esq., William Thom, Esq., Sir W. Rowan Thomson, K.B.E., and H. C. B. Underdown, Esq.

BRANCH COMMITTEES.

WIRE MACHINERY.—Mr. Charles Bennion (Chairman); Mr. Frank Impey, M.B.E., of the Brass Wire Association; Mr. J. W. Earle, of Messrs. Earle, Bourne, and Co. (Limited); Mr. H. D. Lloyd, of the Whitecross Company (Limited); Mr. F. Smith, of Messrs. E. and A. Smith Co. (Limited); Mr. G. Rushworth of Messrs. G. Crossley (Limited); Mr. D. C. Bolton, of Messrs. T. Bolton and Sons; Mr. W. W. Gibbins, of the Birmingham Battery and Metal Co. (Limited); Mr. E. Mapplebeck, of Messrs. John Wilkes, Son, and Mapplebeck (Limited); Mr. J. C. Hunter, of Messrs. Ramsden, Camm, and Co.; Mr. W. H. A. Robertson, of Lynton Works, Bedford; and Mr. W. Barton.

PRINTING MACHINERY.—Mr. Charles Bennion (Chairman); Mr. H. Furnival, of Messrs. Furnival and Co. (Limited); Mr. G. F. Read, of Messrs. R. Hoe and Co. (Limited); Mr. Walter Haddon, of Messrs. J. Haddon and Co.; Mr. J. D. Ratcliff, of Messrs. J. Ratcliff and Sons (Limited); Mr. W. H. Lock, of the Linotype and Machinery (Limited); and Mr. A. W. Lockett, of Messrs. W. H. Lockett and Co.

PRINTERS' GENERAL MACHINERY.—Mr. Charles Bennion (Chairman); Mr. E. A. Braddick, of the British Wire Stitching Machine Co. (Limited); Mr. T. B. Kendell, of Messrs. T. Kendell and Sons; Mr. A. Collis, of Messrs. J. Collis and Sons; Mr. J. K. Robertson, of Messrs. Strachan and Henshaw (Limited); Mr. W. I. Burch, of the Lanston Monotype Corporation (Limited); Mr. J. W. Bainbridge, of Messrs. J. W. Bainbridge (Limited); Mr. A. Hess, of Messrs. Jampson, Bettridge, and Co.; Mr. S. Thompson, of Messrs. T. C. Thompson and Son; Mr. Leo Crosland, of Messrs. W. Crosland (Limited); Mr. A. Hewitt, of Messrs. Hewitt Bros.; Mr. J. Haddock, of Messrs. Job, Day, and Sons (Limited); Mr. A. H. Walker, of the Linotype and Machinery (Limited); Mr. A. G. Strong, of Messrs. H. O. Strong and Sons (Limited); and Mr. E. S. Hunter, of Messrs. Hunters (Limited).

PAPER-MAKING MACHINERY.—Mr. Charles Bennion (Chairman); Mr. T. D. Nuttal, of Messrs. Bentley and Jackson (Limited); Mr. V. G. Fraser, of Messrs. Masson, Scott, and Co. (Limited); Mr. J. Paramor, of the Watford Engineering Works (Limited); Mr. J. Dixon, of Messrs. P. Dixon and Son; Mr. B. I. Milligan, of Messrs. Mather and Platt (Limited); and Mr. J. Wolstenhome, of Messrs. Charles Walmsley and Co.

LEATHER-MANUFACTURING MACHINERY.—Mr. Charles Bennion (Chairman); Sir Henry Ledgard, of the Vacuum Tanning Company; Mr. W. L. Ingle, of Milnshaw Leather Works; Mr. J. G. Withinshaw, of Highfield Tanning Company; Mr. A. P. Preston, of Messrs. Whitelow (Limited); Mr. H. Hall, of Messrs. Joseph Hall and Co.; Colonel W. E. Walker, of United Tanners' Federation; Mr. H. Cocksill; Mr. F. H. Briggs, of Victoria Leather Works; Mr. Percy Denham, of Messrs. William Mortimer and Co.; Mr. E. G. Wilson of Messrs. E. Wilson and Co. (Limited); and Major D. Amor-Wilkins, of the United Tanners' Federation.

Textile Machinery (Manchester).—Sir George Bullough (Chairman); Mr. L. A. Forrett, of William Tatham (Limited); Mr. J. Standeven, of Tomlinsons (Rochdale) (Limited); Mr. F. J. Dixon, of Mather and Platt (Limited); Mr. W. H. Norton, of Sir James Farmer and Sons (Limited); Mr. J. Brandwood, of Elton Cop Dyeing Company (Limited); Capt. P. Thomas; Mr. C. W. Leather, of P. and C. Garnett (Limited); Mr. H. Smith, of Prince, Smith, and Son; Mr. J. W. Sowden, of David Sowden and Sons (Limited); Mr. E. Hollingsworth, of Hutchinson, Hollingsworth, and Co. (Limited); Mr. G. Smith, of William Smith and Bros. (Limited); Mr. A. F. Fielding, of Devege and Co.; Mr. A. McMurdo, of James McMurdo; and Mr. W. B. Richardson, of Messrs. Richardson, Tuer, and Co.

Textile Machinery (Nottingham).—Sir George Bullough (Chairman); Mr. E. Jardine, M.P., of Hofberts (Nottingham) (Limited); Mr. J. Pycroft, of Newton and Pycroft (Limited); Mr. W. Spiers, of William Spiers; Mr. C. R. Woodward, of M. Meller and Sons; Mr. W. B. Mitchell, of William Mitchell (Pens) (Limited); Mr. W. H. Price, of Shepshed Lace Manufacturing Company (Limited); Mr. W. O. Larmuth, of Thomas Larmuth and Co. (Limited); and Mr. James Drake, of Howard and Bullough (Limited).

Light Section Rolling and Drawing.—Mr. H. F. Crittall (Chairman); Mr. C. A. Lister, of R. A. Lister and Co.; Mr. Jas. Whitby, of George Warren and Co.; and Mr. W. D. Lloyd, of Sutton and Ash (Limited).

Machine Tools.—Mr. W. B. Lang (Chairman); Mr. J. W. S. Asquith, of William Asquith and Co. (Limited); Mr. J. W. Darling of Darling and Sellers (Limited); Mr. A. Drummond, of Drummond Brothers (Limited); Mr. E. M. Griffiths, of Burton Griffiths and Co (Limited); Mr. H. A. Liebert, of John Holroyd and Co. (Limited) Mr. S. H. March, of Churchill Machine Tool Co. (Limited); and Mr. H. G. Williams, of Machine Tool and Engineering Association.

Agricultural Machinery.—Mr. C. A. Lister (Chairman); Mr. E. J. Bentall, of E. H. Bentall and Co.; Mr. T. D. Harrison and Mr. Wm. Harrison, of Harrison, McGregor and Co. (Limited); Mr. E. Marshall, of Marshall Sons and Co. (Limited); Mr. J. McLaren of T. H. McLaren; and Mr. J. Legar, of R. Hornsby and Son (Limited).

Aircraft.—Mr. P. J. Pybus (Chairman); Mr. R. O. Cary, of Sopwith Aviation Company (Limited); Mr. N. G. Gwynne, of Gwynnes (Limited); Mr. J. D. Siddeley, of Siddeley-Deasy Motor Car Company (Limited); Mr. H. White Smith, of British and Colonial Aeroplane Company; Mr. G. Holt Thomas, of Aircraft Manufacturing Company (Limited); and Mr. C. V. Allen, of Society of British Aircraft Constructors (Limited).

Hollowware, Sheet Metal, and Pressed Work.—Mr. G. H. Sankey [illegible] Fletcher, of Birmingham Chamber of

Times (article concluded) 13.11.18.

703/14

703

Commerce, Mr. W. Hall-Jones, of Wolverhampton Chamber Commerce; and Lieutenant H. Soper.

Electrical Apparatus.—Mr. J. Taylor (Chairman); Mr. L. Atkinson, of the Cable Makers' Association; Mr. A. F. Berry, the British Electric Transformer Company (Limited); Mr. R. Duma of the British Thomson-Houston Company; Mr. D. N. Dunlop, of the British Electrical and Allied Manufacturers' Association; Mr. B. Longbottom, of Electromotors (Limited); Mr. G. E. Pingree of the Western Electric Company (Limited); Mr. R. H. Schofield of Messrs. Ferranti (Limited); Mr. S. D. White, of the General Electric Company (Limited); and Mr. Herbert Taylor, of Mather and Platt (Limited).

Scientific Instruments.—Mr. W. Taylor (Chairman); Mr. Douglas Baird, of Baird and Tatlock (Limited); Mr. Gerald Bishop, of Marion and Co. (Limited); Mr. Arthur Colefax, of Controller of Optical Munitions and Glassware Supply; and Mr. Robert Wigglesworth, of W. Cooke and Sons (Limited).

Miscellaneous Machinery.—Mr. W. Thom (Chairman); Mr. Charles Day, of Mirrless, Bickerton, and Day (Limited); Mr. H. M. Bickerton, of the National Gas Engine Company; and Mr. E. D. Simon, of Henry Simon (Limited).

Motor Industry.—Mr. Underdown (Chairman); Mr. B. Caillard, of British Lighting and Ignition Company; Mr. C. A. Hyde, of Birmingham Small Arms Company (Limited); Mr. E. M. S. Instone, of Daimler Company (Limited); Mr. E. Powell, of Humber (Limited); Mr. J. W. Stocks, of Components (Limited); Mr. L. Walton, of Vauxhall Motors; Mr. H. Wyatt, of Association of British Motor and Allied Manufacturers; and Mr. G. M. Young, of Albion Motor Car Company.

LABOUR PANEL.—In connexion with this Committee a Labour Advisory Panel has been appointed to advise on all matters arising out of the work of the Committee which affect labour interests. The Panel is composed as follows:—Sir Claud Schuster (Chairman); Robert H. Coates, Esq., Alexander German, Esq., A. Herd, Esq., W. H. Hutchinson, Esq., W. T. Kelly, Esq., Miss Mary Macarthur, T. E. Smith, Esq., A. B. Swales, Esq., Miss Gertrude Tuckwell, and George Wilkinson, Esq.

SUPPLY OF RAW MATERIALS AFTER THE WAR.

In this connexion the Minister of Reconstruction is being advised by committees to whom, for their general guidance, the following terms of reference have been given:—

(1) To consider and report upon the nature and amount of the supplies of materials and foodstuffs which, in their opinion, will be required by the United Kingdom during the period which will elapse between the termination of the war and the restoration of a normal condition of trade, and the steps which should be taken to procure these supplies, having regard to:—

(*a*) The probable requirements of India, the Dominions, and Crown Colonies for such supplies at the close of hostilities.

(*b*) The probable requirements of belligerents and neutrals for such supplies at the close of hostilities.

(*c*) The sources from which, and the conditions under which, such supplies can be obtained and transported, and, in particular, the extent to which they might be obtained from the United Kingdom or within the Empire, or from Allied or neutral countries.

(2) To consider also whether any measure of control will require to be exercised, and the extent and character of such control.

The following compose the individual committees:—

Aluminium.—Mr. Cecil L. Budd, C.B.E., Ministry of Munitions Chairman; Mr. Murray Morrison, of Messrs. the British Aluminium Company (Limited); Mr. H. J. Jack, of Messrs. the Aluminium Corporation (Limited); and Mr. F. W. Gower, of Messrs. the Birmingham Aluminium Casting Company.

Antimony.—Mr. Cecil L. Budd, C.B.E., Ministry of Munitions, Chairman; Lieutenant-Colonel A. J. Foster, C.M.G., of the Ministry of Munitions; Mr. Clive Cookson, of Messrs. Cookson and Co.; and Mr. Miller Hallett.

Copper.—Mr. Cecil L. Budd, C.B.E., Ministry of Munitions, Chairman; Mr. Thomas Bolton, of the Wire Association; Mr. Ambrose Hopper, of the Cold Rolled Metals Association; Mr. George Jewell, Ministry of Munitions; Sir Gerard A. Muntz, Bt., of the Brass and Copper Tube Association; Mr. Leonard Sumner, Copper Manufacturers' Association; and Mr. R. W. Rucker, Chairman of the Committee of the London Metal Exchange.

Lead.—Mr. Cecil L. Budd, C.B.E., Ministry of Munitions, Chairman; Lieutenant-Colonel A. J. Foster, C.M.G., representing the Lead Manufacturers' Association, White Lead Manufacturers' Association, and Lead Oxide Manufacturers' Association; Mr. Clive Cookson, of Messrs. Cookson and Co. (Limited), Newcastle-on-Tyne; Mr. F. C. Hill, of Messrs. Locke, Lancaster, and Co. (Limited), London; and Mr R. W. Rucker, Chairman of the Committee of the London Metal Exchange.

Nickel.—Mr. Cecil L. Budd, C.B.E., Ministry of Munitions (Chairman); Lieutenant-Colonel A. J. Foster, C.M.G., Ministry of Munitions; Mr. Saxton Noble, of Messrs. Armstrong, Whitworth, and Co. (Limited); Mr. D. O. Evans, of Messrs. Mond Nickel Co. (Limited); and Mr. A. H. Wiggin, of Messrs. Henry Wiggin and Co. (Limited).

Spelter.—Mr. Cecil L. Budd, C.B.E., Ministry of Munitions (Chairman); Mr. F. A. Keating, Chairman of the Zinc Smelters' Association; Mr. Peter Rylands, Chairman of the Wire Netting Association; Mr. Henry Summers, Chairman of the Galvanized Iron Manufacturers' Association; and Mr. A. Hopper, of the Cold Rolled Metals Association.

Tin.—Mr. Cecil L. Budd, C.B.E., Ministry of Munitions (Chairman); Mr. J. B. Young, of Messrs. E. Boustead and Co. (the chief importers of Straits Tin); Mr. H. C. Bond, Chairman of the Tin Plate Manufacturers' Association; and Mr. R. W. Rucker, Chairman of the Committee of the London Metal Exchange.

Ferro-Alloys.—Mr. E. W. Harbord, C.B.E., Ministry of Munitions (Chairman; Mr. A. Balfour, of the High Speed Steel Alloys (Limited); Mr. H. A. Blackwell, of Messrs. G. G. Blackwell, Sons and Co. (Limited); Mr. W. Conan, of the Continuous Reaction Company (Limited); Mr. F. MacLaren of the Thermo Electric Ore Reduction Corporation (Limited); Mr. H. Pelle, of the Newcastle Alloy Company (Limited); and Mr. T. R. Phillips, Ministry of Munitions.

Asbestos.—Admiral Sir E. B. Slade, K.C.V.O., K.C.I.E. (Chairman); Mr. C. J. Bell, of Bell's United Asbestos Company; and Mr. Harold Jones, of Turner Bros. Asbestos Company.

Hides and Skins.—Mr. Lawson-Johnson (Chairman), Mr. F. H. Briggs, Mr. H. Percy Dendum, Mr. W. L. Ingle, Mr. Charles A. Scriven, Mr. Henry Ward, and Mr. S. Young.

BUILDING MATERIALS.

A special Committee has been appointed to advise on the important questions connected with the supply of building materials. Its terms of reference are as follows:—

(1) To inquire into the extent of the probable demands for building materials for all purposes which will arise in this country during the transition period, and the extent of the available supply and form of such material.

(2) To inquire how far the quantities of materials now available are capable of increase, what are the difficulties in increasing them, and how these difficulties can be removed; and to report to what extent an increase in production will affect the price of materials.

(3) In the event of the supply of material or labour being insufficient to fulfil the total building demand, to consider the principles and methods by which the priority of various claims should be settled; and to report what steps are necessary to ensure that the manufacture of the material so far as it is at present inadequate shall be extended in time to secure sufficient quantities for use when required on the cessation of hostilities, and to recommend what steps should be taken during the war to facilitate a prompt commencement of building work at that time.

(4) Generally to consider and report upon any conditions affecting the building trade which tend to cause unduly high prices, and to make recommendations in regard to any measure of control which it may be desirable to exercise over the purchase, production, transport, and distribution of material.

The Committee consists of the following members:—

Mr. J. Carmichael, J.P. (Chairman); Sir Arthur Shirley Benn, K.B.E., M.P.; Mr. C. B. Broad; Sir Maurice Bonham Carter, K.C.V.O., K.C.B.; Mr. J. Good; Mr. W. J. Jones, C.B.E.; Mr. J. Walker Smith, M.Inst.C.E.; Mr. J. Storrs, J.P.; Sir John Tudor Walters, M.P.; and Mr. H. D. Searles Wood, F.R.I.B.A.

Timber Supplies.—A report has been made on the future timber supplies of Great Britain by Professor E. B. Stebbing.

COUNCIL ON PRIORITY AFTER THE WAR.

The War Cabinet recently set up a Cabinet Committee to deal with post-war priority questions and a standing Council on Post-War Priority, composed of representatives of employers and workpeople in various industries, is now at work. This council is constituted as follows:—

MINISTER OF RECONSTRUCTION (President).

SIR HENRY BIRCHENOUGH, K.C.M.G. (Chairman).

MEMBERS.—Sir Kenneth Anderson, K.C.M.G., Orient Steam Navigation Company, London, Ministry of Shipping; Mr. W. Appleton, General Federation of Trade Unions; Mr. H. R. Armitage, Bradford Dyers' Association, Manchester; Mr. J. T. Brownlie, Amalgamated Society of Engineers; Colonel Byrne, C.M.G., Secretary of the War Priorities Committee; Mr. J. Carmichael, Contractor, Wandsworth, London, S.W.; Mr. J. H. Clapham, C.B.E., Litt.D., Board of Trade; Sir Sydney Henn, K.B.E., Director of Priority, Army Contracts Department, War Office; Mr. W. J. Larke, O.B.E., British Thomson-Houston Company, Rugby, Ministry of Munitions; Sir Peter McClelland, K.B.E., Messrs. Duncan, Fox, and Co., London; Sir Herbert Rowell, K.B.E., R. and W. Hawthorn, Leslie, and Co., Newcastle-on-Tyne; Sir David Shackleton, K.C.B., Secretary, Ministry of Labour, ex-President Trade Union Congress, and ex-Chairman of National Labour Party; Mr. Wallace Thorneycroft, Lochgelly Iron and Coal Company, Steel Company of Scotland; Mr. Alexander Walker, John Walker and Sons, Kilmarnock, Ministry of Reconstruction; and Mr. J. Wormald, Mather and Platt, Engineers, Manchester, Chairman of the Industries Committee. Additional Labour representatives have been invited to join the council, and their names will shortly be announced.

INTERIM INDUSTRIAL RECONSTRUCTION COMMITTEES.

The proposals submitted by the Committee on the relations between employers and employed, viz., that in each industry which has reached a sufficient level of organization there should be established a Joint Standing Industrial Council consisting of equal numbers of representatives of associations of employers and trade unions, having been approved by the Government, the Minister of Reconstruction will consult these councils, where they have been formed, on reconstruction questions affecting their industry.

Joint Industrial Councils have been set up in the following industries:—

Baking.	Hosiery.
Bedsteads.	Leather-goods and belting.
Bobbins.	Matches.
Building.	Paint and varnish.
China-clay.	Pottery.
Furniture.	Rubber.
Gold, silver, horological and allied trades.	Silk.
Heavy chemicals.	Vehicle building.

In certain industries, however, owing to various reasons, the progress made with the establishment of joint standing industrial councils has as yet been slow, and the Minister of Reconstruction has been, in association with the Board of Trade and the Ministry of Labour, promoting the formation of interim industrial reconstruction committees consisting of equal numbers of representatives of organizations of employers and trade unions. These committees have been formed in the following industries:—

Basket-making.	Heavy chemicals. In this industry a joint industrial council has also been set up which is represented on this Special Committee, which has been formed at the suggestion of the Minister of Reconstruction to deal with technical and commercial questions falling outside the scope of the Council.
Blacksmiths and farriers.	Leather production.
Brick and fireclay.	Lock, safe, and latch.
Brush-making.	Music trades.
Catering.	Packing-case making.
Cement.	Patent fuel.
Cocoa, chocolate, sugar confectionery, and jam.	Quarrying.
Coopering.	Railway carriage and wagon building.
Cutlery.	Wire manufacturing.
Envelopes and manufactured stationery.	Woollen and worsted.
Fertilizers.	
Furniture warehousing and removing.	
Glass.	
Gloves.	
Iron and steel trades. The work of this Committee is limited to commercial and technical questions.	

(Continued at foot of next column.)

Arrangements have also been made with the Cotton Control Board and the Provisional Committees which have been appointed in 17 industries to draft constitutions for Joint Industrial Councils to undertake the functions of Interim Industrial Reconstruction Committees.

STORAGE EXECUTIVE.

This body has been appointed to collect information from Departments of available storage accommodation, to act as a clearing-house of information in respect of such storage, and to allocate the same in the event of more than one Department requiring it. This body is composed as follows:—

Sir Charles Metcalfe, Bt. (Chairman); Captain Norbury, R.N., Superintendent of Ordnance Stores, Admiralty; Mr. J. W. L. Oliver, O.B.E., Deputy Director of Naval Stores, Admiralty; Colonel A. S. Redman, of the Directorate of Movements and Railways, War Office; Brigadier-General Heron, C.B., of the Directorate of Mobilization, War Office; Brigadier-General Mirendin, Director of Demobilization, Air Ministry; Lieutenant-Colonel C. D. Harvey, R.A.F., Inspector of Stores Depôts, Air Ministry; Lieutenant-Colonel Lindsay, Assistant Director of Movements, Air Ministry; Mr. W. T. Potts, Director of Forwarding Department, Ministry of Munitions, Major the Hon. L. H. Cripps, C.B.E., Deputy Controller of Stores, Ministry of Munitions; Mr. H. F. Carlill, Assistant Secretary, Industrial Power and Transport Department, Board of Trade; Sir Robert Turnbull, Kt., M.V.O., Railway Executive Committee; Mr. L. A. P. Warner, Director of Ports Branch, Ministry of Shipping; Mr. E. J. Foley, Director of Military Sea Transport, Ministry of Shipping; Sir Norman Hill, Kt., Chairman, Port and Transit Executive Committee; Sir F. Baines, Kt., C.B.E., M.V.O., Principal Architect, Office of Works; J. Baillie Hamilton, Esq., Director of Storage, Ministry of Food; Sir Howard Frank, K.C.B., Director of Lands, War Office, Ministry of Munitions, and Air Ministry, Disposal of Surplus Government Property Advisory Council; and Lieutenant-Colonel Bonham Carter, Ministry of Reconstruction, who also acts as Secretary to the Committee.

ENGINEERING AND METALLURGY NOTES.

Training Women as Engineers.

Can women be trained as engineers?

The question, so frequently asked since girls showed that they could handle turret and capstan lathes and other machine tools with care and accuracy, has apparently been answered in the affirmative by a leading firm in the trade, and it would seem that it has opened yet another profession to the educated woman. Hitherto it has commonly been supposed that the mechanical instinct, the ability to construct, was the special prerogative of the male. In this connection it must be admitted that woman was seldom if ever afforded the opportunity to show what she could do; there were many who looked askance at the woman who could drive a motor or motor-cycle, and, for some reason, it was almost regarded as unwomanly for her to repair a puncture or replace a faulty sparking plug. The altered conditions brought about by the war has changed all that, and it certainly seems that in the near future woman will be given the opportunity of proving her capabilities in many branches of engineering, and it only remains to be seen whether, given proper and systematic training, she will be able to make good.

A little over a year ago a well-known firm of manufacturers of precision grinding machinery, finding themselves seriously hampered by a lack of skilled men, decided to train women to carry out their work. There were many who considered the scheme as foredoomed to failure, but the firm made their plans, and have now, after some fifteen months of experience, allowed some account of the results obtained to be made public.

A Fair Test.

Some thirty women were selected for the work, and of these twelve were specially trained in the tracing and detailing sections of the drawing office, whilst the others, who were not of quite so high a standard of education, were set to work at the production of blue prints, with the prospect of early promotion to tracing and even more advanced work as soon as they showed ability and aptitude. It was understood that they should take precedence of any more recently engaged employees in their promotion, provided they gave reasonable promise of being able to undertake work of a higher grade. Those who were engaged as tracers were also told that they would be promoted to assembly drawings, and even to designing in due course, and as a result two out of the thirty are now producing workshop drawings from complete plans of smaller scale, and one of these has already proved her ability to prepare drawings for foundry and other patterns practically unaided.

Although the firm felt it advisable to select well-educated women for their work, they regarded brightness and quick intelligence as essential. It is interesting to note—although it sheds a somewhat subdued light on the value of modern education—that those applicants who had had previous training in the high schools on drawing work were not so successful in carrying out their duties as women of average intelligence who had not been through the school drawing classes. In discussing this point, Messrs. Dunbar and Freeland, to whom the writer is indebted for this information, admit that the reason for this is not quite clear. They suggest that it is probably due to the fact that the girls, or indeed any who have had some instruction, feel that they are quite well versed in the subject, and are not disposed to follow closely the instructions given, or to learn the work in the way in which the firm feel they should be taught.

The possession of ideas of one's own has often been a bar to success in other walks of life, and a further point is that the instruction of the public school is generally arranged for a broad general knowledge of a subject, and so is rarely applicable to any particular and specialised branch. Whatever may be the reason, the firm has found that many who are perfectly well versed in the technical terms associated with drawing may possess only the faintest notion as to how to make use of the knowledge they possess. In this matter it appears that age has little to do with it, as those employed ranged from girls of seventeen who had just left school to women of thirty or thirty-five years of age.

A Probation Period.

Dealing first with the work of lesser importance, it appears that the blue printing section is conducted entirely with women help. In the course of an interesting communication on the subject to the "Iron Age," it is mentioned that the normal output of this section is from 500,000 to 1,000,000 square inches of finished blue print per week. This amount of blue printing is handled by a forewoman and two girls. This staff,

of skilled men, decided to train women to carry out their work. There were many who considered the scheme as foredoomed to failure, but the firm made their plans, and have now, after some fifteen months of experience, allowed some account of the results obtained to be made public.

A Fair Test.

Some thirty women were selected for the work, and of these twelve were specially trained in the tracing and detailing sections of the drawing office, whilst the others, who were not of quite so high a standard of education, were set to work at the production of blue prints, with the prospect of early promotion to tracing and even more advanced work as soon as they showed ability and aptitude. It was understood that they should take precedence of any more recently engaged employees in their promotion, provided they gave reasonable promise of being able to undertake work of a higher grade. Those who were engaged as tracers were also told that they would be promoted to assembly drawings, and even to designing in due course, and as a result two out of the thirty are now producing workshop drawings from complete plans of smaller scale, and one of these has already proved her ability to prepare drawings for foundry and other patterns practically unaided.

Although the firm felt it advisable to select well-educated women for their work, they regarded brightness and quick intelligence as essential. It is interesting to note—although it sheds a somewhat subdued light on the value of modern education—that those applicants who had had previous training in the high schools on drawing work were not so successful in carrying out their duties as women of average intelligence who had not been through the school drawing classes. In discussing this point, Messrs. Dunbar and Freeland, to whom the writer is indebted for this information, admit that the reason for this is not quite clear. They suggest that it is probably due to the fact that the girls, or indeed any who have had some instruction, feel that they are quite well versed in the subject, and are not disposed to follow closely the instructions given, or to learn the work in the way in which the firm feel they should be taught.

The possession of ideas of one's own has often been a bar to success in other walks of life, and [illegible] a further point is that the instruction of the public school is generally arranged for a broad general knowledge of a subject, and so is rarely applicable to any particular and specialised branch. Whatever may be the reason, the firm has found that many who are perfectly well versed in the technical terms associated with drawing may possess only the faintest notion as to how to make use of the knowledge they possess. In this matter it appears that age has little to do with it, as those employed ranged from girls of seventeen who had just left school to women of thirty or thirty-five years of age.

A Probation Period.

Dealing first with the work of lesser importance, it appears that the blue printing section is conducted entirely with women help. In the course of an interesting communication on the subject to the "Iron Age," it is mentioned that the normal output of this section is from 800,000 to 1,000,000 square inches of finished blue print per week. This amount of blue printing is handled by a forewoman and two girls. This staff, besides doing the work of ordinary blue printing, take care of all the other forms of reproduction work, such as photostats, Van Dykes, etc. The equipment of the blue-print section consists of one 45in. continuous printing machine, one 60in. continuous washing and drying machine, photostat machine, trimmers, washtrays, hangers, etc. The girls have a weekly basic rate for 44 hours of service. They are guaranteed their weekly rate, but they work on a piecework system and average 20 to 50 per cent. over their base rates.

In the course of the article referred to it is pointed out that women are employed as tracers with a definite understanding as to their duties and advancement. They are given to understand that they are not certain of success and must prove their ability before they can be recognised as a member of the department. They are first taken on with the understanding that they are to work for one month under competent instruction as a sort of probation period in which the supervising engineer can decide whether they are capable of development for actual work. In this period they have eight lesson sheets which they have to make over and over again until their work is satisfactory to the instructor. That they may feel a degree of contentment, and that they may take care of their financial obligations, they are paid a weekly rate of about 34s. In other words, the compny is willing to pay to develop a tracer, or, in the words of the supervisor, "it is willing to gamble six or seven pounds that it can make a tracer of a girl in four weeks."

At the end of this probation period, or before, if it is possible, a decision is made as to the prospective usefulness of the student. If the decision is a negative one she leaves; if it is affirmative she is put on regular work at the normal rate for which inexperienced boy tracers can be hired in that locality. This remains her rate of pay for five months. At the end of five months she is advanced a few shillings a week, and at the end of six months more she receives another increase. Further advancement in pay is based upon the ability she may develop to perform the work, and the degree to which she demonstrates that she is capable of taking on new tasks and new responsibilities. The company purposes paying the women the same rate as would have to be paid to young men for corresponding service. As the company is desirous of advancing the women as fast as possible, those showing particular adaptability for drawing work, and having somewhat of a mechanical instinct, are developed into detailers and for layout work.

A Year's Experience.

When a woman is engaged, and during the instruction period of a month or less, she is required to charge her time against an order which is issued at the time she is hired. This

is done in order that records may be kept of th exact cost of each girl's instruction. Although period of four weeks has been set as the limit o time in which a woman shall show her adapta ability for the work, in the group that has bee trained it has never been necessary to go to thi limit of time, and many have proved thei ability to perform the desired tasks in three o four days.

Each woman student is furnished with ar equipment complete for the work which she i to perform. It is believed that this is quite a factor in the successful conduct of a woman's section of a tracing division, because when they are given only such instruments as are needed in their work they become proficient in the use of those instruments, and are not confused by having a complete set of drafting implements with many of which they are not sufficiently acquainted to make proper use. As the company furnishes the instruments, it is assured that they are high grade, are all just alike, and that one girl has no advantage over another in the tools she uses. So the common excuse that "If I had such and such instruments like the other girl I could do better work" is not heard.

The Universal drafting machine is used in the entire department, this applying to women tracers as well as the regular draftsmen, and therefore the instructors are not confronted with the problem of teaching the use of the T square, parallel ruler, and other instruments. This also eliminates the triangle and scales, and the equipment is reduced to a very small number of instruments which the women must master.

There is no need here to go into particulars of the lessons given, although Messrs. Dunbar and Freeland have set them out in complete detail. The following summary given of a year's experience is certain, however, to be of interest to every firm which has contemplated the employment of women in drawing office and other engineering work, as well as to all who may contemplate taking up this branch of engineering as a profession, and may consequently be quoted at length.

The training division is in charge of a man competent by experience and temperament for this special task. The success of such work rests largely in the selection of the man to take charge of it. One must be secured who is competent to direct the girls, and, further, can appreciate their little peculiarities and tactfully give instruction and criticism so as to gain their confidence. It has been determined, too, that another important feature in the successful conduct of such a division of women workers is to place them in a separate room so that there will be little occasion for them to intermingle with the draftsmen Reference has been made to the necessity for careful selection of the students, and too much emphasis cannot be placed upon the statement that experience dictates that those who have not had previous training learn more rapidly and thoroughly than those who have had some idea of the work and have well-fixed conceptions of what they can and cannot do. Experience, too, dictates that there is little opportunity for group instruction, as each woman student must be studied and treated individually to secure the best results.

The adaptability of women to this work is particularly well shown by some figures of the cost of training. Of the girls who have taken up tracing study there has been but one who failed. The cost of training the first five girls were, respectively, £1 12s. 8d., £1 9s. 5d., £1 5s., £1 12s., and £2 8s. The women who have taken up the training since then have cost approximately the same amounts.

A MONTH'S HOLIDAY FOR MUNITIONERS?

Civil War Workers' Committee Unable to Agree.

The question of the month's holiday for munition workers is one that will have to be settled promptly by the War Cabinet.

The Civil War Workers' Committee, which was appointed by Dr. Addison (containing representatives of the departments concerned, of employers, and of labour) has been unable to come to a unanimous decision.

The Committee is split into two sections—the official and the Labour members. The majority includes Mr. Gerald Bellhouse, of the Home Office, the Right Hon. F. D. Acland, M.P. (Board of Agriculture), Mr. J. A. Barlow (Ministry of Munitions), Mr. W. H. Beveridge (Board of Trade), Mr. H. B. Butler (Ministry of Labour), Mr. J. A. Dale (War Office Contracts Department), Mr. E. Jardine, M.P., Mr. D. S. Marjoribanks, Mr. C. F. Rey (Ministry of Labour), and Mr. Humbert Wolfe (Ministry of Munitions).

Unable to Support Scheme.

They are unable to support the scheme either at once or during the next 12 months.

The long hours of the early stages of the war have been steadily reduced, and the cases of T.N.T. sickness have fallen from 11 per cent. in one factory in August, 1916, to a maximum of less than 1 per cent., while in many filling factories it is nil.

In certain areas a limited number of munition workers are suffering from the strain of long journeys in overcrowded trains and trams, but it is not possible to select them for a holiday.

There is no analogy with the case of the soldier; munition workers may move from works to works as they choose.

Demand for General Holiday?

It would be impossible to draw an equitable distinction between munition workers and other classes of workers, and an attempt to do so would lead to an irresistible demand for a general holiday at the expense of the State.

In a soap factory, for instance, persons making glycerine are doing munition work, and others are not. How could the holiday be given to one class and refused to others? Besides, clerks and shop assistants who have worked at least as hard as munition workers for much less pay would have morally ah strong a claim for a holiday.

Lastly, the majority believe that instead of assisting to minimise the dislocation of the transfer from war to peace work, such a holiday would have a precisely opposite effect.

The Minority Report.

The Labour Minority's report is signed by Miss Susan Lawrence, Dr. Marion Phillips, Mr. J. J. Mallon, Mr R. Young, Mr. A. Bellamy, Mr. George Dallas, and Mrs. Bell-Richards.

They deny that it is impossible to discriminate between munition workers and other workers, and declare that under the Munitions of War Acts, 1915-1917 the definition has been drawn with constantly increasing precision."

But if in practice the munition workers' holiday was extended to other classes of workers the minority think this is an argument in favour of the former proposal.

Special Restrictions

The law has imposed special restrictions on munition workers, and by prosecutions for bad time-keepeing has prevented them from taking rest, while it has relaxed the operations of the Factory Acts

Although night work for women is prohibited by law, very large numers of women are now (April, 1918) working at night.

The elements of danger in N.T N work cannot be altogether eliminated by precautions, while the employment of women on labouring work formerly considered unsuitable for them has made the strain greater.

The minority therefore recommend tht every munition worker should have a month's holiday with pay at some time during the next 12 months, preferably in the "slack" season of that particu- trade.

1918. December.
Railway Nationalisation.

The Call. 21. 12. 18.

7

* * * *

But there is, as intimated above, a good deal more yet to follow. In the N.U.R. national programme just referred to, another important item is the thirteenth :—

"Management of Railways.—That there be equal representation, both national and local, for this union upon the management of all railways in the United Kingdom."

The General Secretary, Mr. J. H. Thomas, in his official statement on the result of the eight-hour negotiations, says: "The other matters included in our national programme will in the interval (to February 1st, 1919) be negotiated by a committee of both sides." It will be extremely interesting to see how strongly the "pull" of the organised workers will tell on this vital matter. In our opinion this is a more dramatic demand than the hours question, important though that is. If it means what it says, it is the beginning, and a big beginning, of the control of industry by the workers, which, carried out in its entirety, means, of course, the end of private ownership and control, and the running of the railways for the use and benefit of the nation under democratic control.

* * * *

Nationalisation of the railways has, of course, been in the domain of practical politics for many years, but it would probably have remained in the air but for two powerful factors—the goal aimed at by the railway trade unions and the war. So now we have Mr. Churchill, as a Minister, announcing that the Government intend to nationalise the railways. This makes it all the more necessary that the workers shall have their views and demands ready, because we do not want any more nationalising of the same kind as the Post Office, which is a bureaucracy more soulless than capitalism, if that be possible. That the workers are getting ready is shown by the fact that the Railway Clerks have drafted a Bill, which seems to be rather far-reaching. At their recent conference the Railway Clerks' Association passed the following resolution :—

"That this conference, being convinced that in order to secure the improvement of public communications and the development of national resources, it is necessary that the railways and canals in the United Kingdom should be acquired by the State, and that provision should be made for co-ordinating with the reconstructed railway service that of the Post Office, and, ultimately, the road-motor, aerial, coastal and steam packet service as parts of a national system of transport under a Minister of Transport and Communications, hereby approves the Draft Bill submitted by the Executive Committee of R.C.A. and commends it to the favourable consideration of the Government, to members of Parliament, and the Committee appointed by the Minister of Reconstruction to consider the problems that will arise when the present war control of the railways ceases."

We have not yet seen the Draft Bill, and cannot, therefore, commit ourselves to approval of it in all or any of its details, but the fact that the workers have put their views into concrete form is in itself a valuable sign.

LABOUR PROBLEM

SCHEME FOR TRAINING OF WOMEN

In view of the greater extent to which women may find employment in the future a sub-committee, under the chairmanship of Miss A. Susan Lawrence, of the Women's Advisory Committee on the Ministry of Reconstruction, have presented to Dr Addison a report urging the necessity for co-ordination of the provision of vocational training for women. The Ministry of Munitions have provided women's training at approximately seventy training centres, seven of these being instructional factories and the remainder technical schools and institutes. The factories are controlled by the Ministry, but the schools are managed by the local education authorities, though the Ministry pay all expenses and the Board of Education give assistance and advice. The Ministry of Pensions has powers for the training of disabled men and pensionable widows. Trade instruction for disabled men is under the supervision of national and local technical advisory committees set up by the Ministry of Labour, and many appropriate schemes for training have been drawn up. The training of pensioned widows, however, has been small in extent. It is estimated that their number within the next six months will amount to 190,000. Only 460 have applied for training. Sanction for this has been given in 204 cases, of which 27 were officers' widows. No communication has been made to the representatives of organised labour with regard either to the curriculum or to the remuneration during or after the training, though advice has been taken with regard to possible openings. Trade boards have important powers as to training, and certain steps have been taken also by the new Whitley Councils and by the Central Committee on Women's Employment.

The report says that the number of bodies interested in training and the want of co-ordination between them may lead to serious overlapping and waste of energy.

The committee consider that co-operation between the Board of Education and the local authorities, associations of employers and employed, and the Ministry of Labour is necessary. The actual training, so far as it is undertaken by public bodies, should be the function of the local education authorities acting either through private or aided institutions and under the control of the Board of Education. They consider that for each industry central and local advisory trade committees representing employers and employed should be formed to draw up an appropriate trade curriculum, to decide as to the rates of wages to be paid during and after the industrial course, to advise as to suitable openings in their industry, to recommend technical instructors for appointment, etc. The Ministry of Labour should be charged with the duty of finding out the demand for trained persons under any particular occupation.

The functions of the Ministry of Pensions and of the Central Committee for Women's Employment should be those of recommending and assisting individuals suitable for training. Neither they nor any other Government Department should provide instruction or institutes; such purely educational work should be carried on by those authorities already set up by Parliament for this purpose. The committee think that the money already expended by the Ministry of Munitions on trainng should be considered as educational endowment, and that the property and equipment should become the property of the appropriate local authority.

The Committee draw attention to the fact that, though their inquiry concerned women alone, the considerations which have determined their recommendations are applicable to both sexes, and they leave it to the Ministry of Reconstruction to consider how far their recommendations might be applied generally.

WHAT EQUAL PAY FOR EQUAL WORK INVOLVES

One of the most interesting parts of the fourth report, just issued, of the Special Committee of the London Chamber of Commerce on Trade During and After the War is that which deals with the question of increased wages.

The success with which many classes of workers have demanded higher wages owing to economic conditions—partly assisted by Government action, but largely due to the circumstances of the war, and which may or may not prove merely temporary—must, the report says, be a matter of grave concern to all employers, whether Government, municipal, or private establishments. The question of wages involves consideration of what a particular industry can bear, especially in view of the claims of women workers to be placed on a parity with men.

The principle of "equal pay for equal work," strictly applied, involves equality of output and efficiency, a consideration which is not always appreciated by labour or by the public. It is generally admitted, and this view finds support amongst labour leaders, that the maintenance of wages on a higher scale than in pre war times, leaving out of consideration war bonuses granted purely on account of the increased cost of living, depends upon increased production. The effect of foreign competition upon wages must also be borne in mind so far as industries which depend to any material extent upon export trade are concerned. It may be hoped that due allowance will be made for these factors in any legislation which may be passed with the object of reverting to trade union rules and conditions suspended for the duration of the war, and that any measure introduced into Parliament with this general object will, by agreement between capital and labour, be so framed as to allow of an equitable adjustment consistently with the requirements of the future.

In their competition with foreign countries British manufacturers have suffered severely in the past from the limited output of their employees, whether due to trade union restrictions or other causes. It is, therefore, essential that this fact should be emphasised in the proper quarters, as if anything like the present standard of wages is to be maintained after the war, a substantial increase in output must be assured, in the best interests of employers and employed, in which both must do their share.

OUT-OF-WORK DONATION AND THE HOLIDAYS

It has been brought to the notice of the Department of Demobilisation and Resettlement that the ordinary periods of stoppage without pay over the Christmas and New Year holiday season are being extended by many employers, and it has accordingly been necessary to consider whether out-of-work donation under the scheme recently instituted by the Government should be paid in these circumstances. Having regard to the fact that the workpeople now in question are not discharged and will resume work on a definite date, it is clear that they are not unemployed in the usual sense. It would be a material extension of the original objects of the donation scheme if the whole of such period of stoppage, including as they do days of customary holiday, were to be treated as unemployment. It would, on the other hand, be productive of hardship if these periods were entirely excluded from the donation scheme irrespective of their length. Having regard to these considerations, it has been decided that in cases where the holiday commonly granted on this occasion is extended by a period of suspension, donation will become payable after a waiting period of six week-days (not necessarily consecutive) instead of the normal waiting period of three consecutive working days.

Thirty thousand munition workers employed at Vickers, Barrow, stopped work on Saturday until January 6. This suspension is to enable the firm to take stock and prepare for peace industries.

PRACTICAL SUGGESTIONS FOR WORKMEN'S DWELLINGS.

By a Working Woman.

"Housing Schemes" fill the bill as one of the most pressing questions of reconstruction to be carried out by this next Government.

We have had many schemes for housing the working classes by private builders—model cottages and flats and tenement buildings, but all have fallen short of being really suitable for the class of people who want them. What we all desire to possess are plain, substantial houses built in accordance with our needs and suitable to the way we live our lives.

First, they must be on a satisfactory basis as regards rent. They must not be on a Government charity basis, as there is no more independent member of society than the average working man; so he must pay a suitable rent. The working man in the country considers 5s per week as much as he can afford with his rates over and above. The factory worker in the town considers 7s 6d a week his limit, the landlord paying the rates in his case. Then if we place the rent at 5s per week in the country and 7s 6d in the town, we must build our houses accordingly.

Let me tell you of a block of houses in the country erected for working people not ten years ago. There are three bedrooms up stairs, entirely suitable; a small sitting room and kitchen, with a piece four-foot square partitioned off for a pantry; no scullery, no pan closet, no washing copper. Consider what this means to the mother in this house. Everything has to be done on the kitchen table: cooking washing up, ironing the clothes and baking, with her family sitting round in discomfort.

SCRAP THE SITTING ROOM.

You say why don't they go into the sitting room? In the winter time they would require additional light and fire, and it would mean additional work for the already overworked mother. Now, if I were planning that house, I should scrap the useless sitting room; place the kitchen range in it, add to it part of the original kitchen, and turn the remaining part of the kitchen into a scullery. I would have a copper for washing days built into this scullery, a sink for washing dishes, and a good-sized table to cook and bake and iron on. Last, but not least, I would have the bath camouflaged under this table. The table top acting as a bed for the bath.

You ask me why I would put the bath there? Because most working families have their bath at night before retiring to rest, and generally like to have the benefit of the kitchen fire to dress and undress at. Then there are the children. The mothers can wash them and bring them to the kitchen fire to be dried and dressed for bed. You must keep in mind that the mother has all this work to do herself. It must be made as easy as possible for her.

Another question I have been asked is: why have the copper for washing in the scullery? Why not have a washhouse outside? Here the children come in again. The mother has to do the washing and attend to the children, and if she can do the washing in the scullery she can keep an eye on the children in the kitchen. Then, when her husband returns from work, he will find a comfortable warm kitchen, with no disturbance of housework going on to turn him out to seek comfort elsewhere.

The town flats for workmen are planned much in the same style, the "parlour" or sitting room taking up the much needed space for kitchen and scullery, and otherwise cramping the real living room of the house into a regular cubby hole.

WOMEN TO SIT IN JUDGMENT.

The remedy I would suggest is that the plans for workmen's dwellings be submitted to a committee of sensible working women who would be able to point out defects and supply suggestions to make life easier for the fortunate working women who are to possess them.

Lastly, we come to the slum-dwellers. They are a class of people who need more than "housing schemes" to lift them out of their dirt and degradation and make them worthy citizens. They want the "will" as well as the means to make homes for themselves and their children. Some of them have sunk to this existence through drink or ill-health, and some have been brought up in it and never known anything better.

It is our duty to provide them with habitable houses, and it is doubly our duty to see that their children are taught the benefits of clean surroundings, and instil into their minds a horror of dirt, so that they shall gradually outgrow the state they were born too, and become useful citizens of our great Empire.

The Hon. Miss Akers Douglas, speaking on housing schemes at Hexham last week, advised the women to hold meetings to consider what kind of houses they wanted under the new housing scheme. She told us communal houses and kitchens and flats with restaurants in the basement were talked of in London, but what was suitable for London was obviously not suitable for the provinces, and unless we had definite plans and wants to offer for ourselves we were likely to have any of the plans going the round "dumped" on us.

Let the women, she said, meet together, where they can and settle amongst themselves what they consider a working man's house ought to consist of. Then let them make their opinion public.

That is why I have given our views.

WOMEN AND INDUSTRY.

In view of the greater extent to which women may find employment in the future, a sub-committee (under the chairmanship of Miss A. Susan Lawrence) of the Women's Advisory Committee on the Ministry of Reconstruction have presented to Dr. Addison a report urging the necessity for co-ordination of the provision of vocational training for women. The report states that the number of bodies interested in training, and the want of co-ordination between them may lead to serious overlapping and waste of energy. Before detailing steps to bring about co-ordination, the committee express the opinion that a woman who is induced to spend time to learn a trade in which there is no opening for her has suffered a serious wrong, and that it is necessary, therefore:

1. That persons should be trained only for occupations in which an ascertained opening for their labour exists.

2. That the training should be strictly practical in character.

The actual training, so far as it is undertaken by public bodies, should be the function of the local education authorities, acting either through private or aided institutions, and under the control of the Board of Education. Two local or central authorities dealing with training for the same class of persons, and possibly for the same occupations, would inevitably lead to confusion. They consider that for each industry central and local advisory trade committees representing employers and employed should be formed to draw up an appropriate trade curriculum, to decide as to the rates of wages to be paid during and after the industrial course, to advise as to suitable openings in their industry, to recommend technical instructors for appointment, &c. The Ministry of Labour should be charged with the duty of finding out the demand for trained persons under any particular occupation. The functions of the Ministry of Pensions and of the Central Committee for women's employment should be those of recommending and assisting individuals suitable for training. Neither they nor any other Government department should provide instruction or institutes; such purely educational work should be carried on by those authorities already set up by Parliament for this purpose. The Committee think that the money already expended by the Ministry of Munitions on training should be considered as educational endowment, and that the property and equipment should become the property of the appropriate local authority. The Committee draw attention to the fact that although their inquiry concerned women alone, the considerations which have determined their recommendations are applicable to both sexes, and they leave it to the Minister of Reconstruction to consider how far their recommendations might be applied generally.

BACK TO CIVIL LIFE.

Practical Training For Women.

REPORT BY THE ADVISORY COMMITTEE.

A sub-committee (under the chairmanship of Miss A. Susan Lawrence) of the Women's Advisory Committee of the Ministry of Reconstruction have presented to Dr. Addison a report urging the necessity for co-ordination of the provision of vocational training for women. They point out that whereas before the war provision for technical instruction was mainly in the hands of the Board of Education and the local education authorities, the war has brought about a great diffusion of control.

The Committee express the opinion that a woman who is induced to spend time to learn a trade in which there is no opening for her has suffered a serious wrong, and that it is necessary therefore:

That persons should be trained only for occupations in which an ascertained opening for their labour exists.

That the training should be strictly practical in character.

CO-OPERATION.

It is necessary therefore that the national and local demand for trained persons for each occupation should be ascertained, and further that the training should be carried on under the closest possible co-operation with those actually engaged in the industry itself.

The Committee consider the co-operation between the Board of Education and the local authorities' associations of employers and employed and the Ministry of Labour is necessary. The actual training, so far as it is undertaken by public bodies, should be the function of the local education authorities acting either through private or aided institutions and under the control of the Board of Education.

They consider that for each industry Central and Local Advisory Trade Committees representing employers and employed should be formed to draw up an appropriate trade curriculum, to decide as to the rates of wages to be paid during and after the industrial course, to advise as to suitable openings in their industry, to recommend technical instructors for appointment, etc.

THE DEMAND.

The Ministry of Labour should be charged with the duty of finding out the demand for trained persons under any particular occupation. The functions of the Ministry of Pensions and of the Central Committee for Women's Employment should be those of recommending and assisting individuals suitable for training. Neither they nor any other Government Department should provide instruction or institutes; such purely educational work should be carried on by those authorities already set up by Parliament for this purpose. The Committee think that the money already expended by the Ministry of Munitions on training should be considered as educational endowment, and that the property and equipment should become the property of the appropriate local authority.

They draw attention to the fact that although their inquiry concerning women alone, the considerations which have determined their recommendations are applicable to both sexes, and they leave it to the Minister of Reconstruction to consider how far their recommendations might be applied generally.

NAVAL OFFICERS.

Officers borne in ships and establishments in the United Kingdom must make any application for demobilisation through their commanding officer, from whom also they should obtain any forms S.1299 required. Personal application at the Admiralty is not permitted.

OUT-OF-WORK DONATION.

It has been decided that in cases where the holidays commonly granted at Christmas and the New Year are extended by a period of suspension out-of-work donation will become payable after a waiting period of six week-days (not necessarily consecutive) instead of the normal waiting period of three consecutive working days.

MEDICAL EXAMINATION.

The Ministry of Pensions state that the demobilisation scheme provides for every man receiving a form on which he states whether he claims to suffer from a disability attributable to his services in the forces. If he does claim such disability medical examination will not delay discharge, but the man may be required to attend a local medical board after he has returned to civil life. All men who state that they suffer from a disability due to service have the right to be medically examined, and there is no question of a man "forfeiting his claim in his haste to leave the Army."

703/22

SUBSTITUTE LABOUR.

FUTURE OF THE WOMAN CIVIL SERVANT.

RECONSTRUCTION PROBLEMS.

In their Sixth and Final Report, which has been published as a White Paper [Cd.9228] the Civil War Workers' Committee, who were appointed to consider "the arrangements which should be made for the demobilization of workers engaged during the war in national factories, controlled establishments, in other firms engaged in the production of munitions of war and on Government contracts, or in firms where substitute labour has been employed for the duration of the war," deal with the subject of substitute labour. In a prefatory note to the Report, Dr. Addison, Minister of Reconstruction, states that the principal recommendations of the Committee have been adopted by the Government.

The Committee remark that the position regarding substitute labour is different from that of the workers engaged on munitions or Army and Navy contracts which they have considered in earlier Reports. Here the new labour has been brought in mainly to replace the men called to the Colours, and it will be discharged only very gradually as the soldiers are demobilized. The Board of Trade returns of employment for April, 1918, show an increase of 878,000 in the number of females employed as substitutes, and a net replacement of 1,064,000 in male labour since July, 1914. The number of male substitutes who are likely to be left without employment is not serious, and the Committee do not think it necessary to make any special recommendation concerning them. With regard to the women, the Committee remark that the position is more critical. Outside the metal and chemical trades (which were discussed in an earlier Report), the great bulk of the women are engaged in clerical and commercial occupations. Separate consideration has been given to the case of temporary clerks enployed in Government Departments, since it was felt that in several respects this presented special difficulties, while an undoubted responsibility rests on the Government, as their employers, to do everything possible to facilitate their employment when their services are no longer required. The Committee state that:—

The whole question of the future position of women in clerical and commercial occupations, not only in London, but in the provinces, is one of great importance and difficulty. It is very desirable not only that the opportunities and conditions of their employment in these occupations should be considered, but also that a more definite understanding should be arrived at with regard to the standards of education and training which should be recognized as qualifications for the various branches and grades of such work. In this connexion it might also be advisable to review the existing facilities for vocational training and to consider on what lines additional facilities, if required, should be provided. We recommend, therefore, that the Ministry of Labour should be asked to set up, in connexion with the Labour Resettlement Committee, a committee to consider and advise on these problems.

EMPLOYMENT EXCHANGES.

The extent and rate of displacement of temporary clerks in Government Departments will be affected by very dissimilar conditions in different departments; but, viewing the question as a whole, the Committee feel that a gradual adjustment may be looked for rather than sudden or complete dislocation. Of the men engaged as temporary clerks, a considerable proportion have been recruited from occupations to which they will in all probability return when normal conditions are restored. The case of the women presents a more difficult problem. The Committee recommend:—

That the Employment Exchange which has been established at Burlington-gardens and is working in connexion with the civil Service Commission should deal with the work of demobilization; and that, if necessary, its staff should be strengthened for this purpose. That a complete register of temporary Government clerks should be formed and kept in the charge of the Burlington-gardens Exchange; and that this register should record not only the qualifications, service, &c., of each individual, but also his or her wishes with regard to continuing in employment after demobilization.

That in connexion with the same exchange there should be set up an Advisory Committee, which should collect and furnish information as to openings outside the civil service and various courses of training; and that this committee should also make arrangements, where required, for special courses of training.

The Committee refer to the fact that it has been urged that on demobilization full-time intensive courses of professional training should be arranged for a selected few, and that bursaries or maintenance grants should be given, to make it possible for full advantage to be taken of these courses. The Committee do not feel justified in recommending action on such lines except in the case of a profession in which a demand for recruits is certain to exist, and in the case of persons who in point of age and education are fully qualified. The teaching profession is a case in point, and they suggest that the question of providing special facilities and modifying regulations where necessary might well be considered by the Board of Education and the Treasury, in conjunction with the other authorities concerned. It is recommended:—

That when the vacancies in the permanent civil service come to be filled the claims of the temporary clerks should be considered, together with the claims of men discharged from the forces and of established civil servants.

That a decision with regard to the future position of women in the permanent civil service should be arrived at and carried into effect, if possible, before demobilization begins.

That as regards temporary posts, vacancies should, wherever possible, be filled by the transfer of clerks employed from other departments; and that, in the cases of those clerks whom it is impossible to retain, the period of notice given should be not less than one month.

WOMEN IN INDUSTRY.

With relation to substitutes engaged in clerical work (otherwise than in Government departments) and in commerce, the views expressed by the different organizations consulted are in very general agreement. It is anticipated that a considerable number of the women and some of the older men engaged as substitutes will voluntarily give up their employment at the end of the war and revert to private life. While the posts of men who have joined the Forces will in almost all cases be kept open for them, it is believed that many will not wish to return to a sedentary life. No serious displacement is expected immediately after the war, but rather a gradual adjustment spread over a considerable period. The view is expressed that women will be employed in insurance offices to a greater extent than in pre-war days, and that to some extent their services will be retained in banks also. It appears that prior to the war neither the clerical workers nor their employers had been in the habit of using employment exchanges to any great extent, but the Committee understand that increasing use is now being made of them by these persons, and that special attention is given to their needs by two of the London exchanges covering districts in which offices, banks, &c., are specially represented.

The Committee recommend that steps should be taken without delay by the railway companies and the trade unions concerned to arrive at an agreement with regard to the conditions of the future employment of women on railways. As regards agriculture, it is estimated in the Board of Trade returns that the number of regular female workers in Great Britain in April, 1914, was 65,500, and that this number had increased by about 33 per cent. in April, 1918. Among these permanent workers are the 15,000 members of the Women's Land Army, as well as those other women who have been drafted on to the land since the war began either through various other organizations or individually. These have been recruited from every class and every occupation, but it is anticipated that, though some will revert to their previous occupations, a considerable proportion will wish to continue agricultural or other outdoor work. Until it is decided, however, what the post-war policy of the Government is to be with regard to such questions as food and timber production, small holdings, rural housing, and emigration, it is impossible to forecast what openings or what inducements there will be for these women to remain on the land, and how many will in the end be driven to seek other forms of employment. It would appear probable, however, that a considerable number of women will continue to be required for agricultural work for some time after peace is declared, and the Committee do not consider that any special arrangements are necessary during the demobilization period.

The Committee, having recommended the machinery which is in their opinion best suited for facilitating the transfer of substitute labour to fresh employment, add that they are satisfied that in practice it will be impossible to find immediate employment for all the workers who will be displaced. They feel, therefore, that to a large extent reliance must be placed on the scheme of general unemployment insurance recommended in their Second Interim Report, together with the further schemes for unemployment benefit which they understand are under consideration by the Government, as the means of meeting the hardships that must arise through the inevitable dislocation.

Daily Chronicle 23. 5. '19

WOMEN AS BANKERS.

NEW CAREER OPEN—BUT NO GREAT RUSH EXPECTED.

The decision of the Institute of Bankers to admit women as members opens a new career for feminine enterprise.

A "Daily Chronicle" representative who made inquiries at some of the banks yesterday found, however, that the number of women who will immediately consider banking as a career is small.

At Farrow's Bank for Women in Knightsbridge, where women were employed long before the war, an official said that no member of the staff intended to enter for banking examinations.

"Most women employed in banks were taken on temporarily, but some are remaining on the permanent staff, and some of these clerks may find it useful to pass the examinations of the Institute of Bankers," she said.

"The examinations include such subjects as taxation, Free Trade, credit, fluctuations and crises, general relation of supply, demand, and value, as well as banking law, economics, and book-keeping.

"It will place women on the same footing as men in the banking world," she added, "and I have no doubt that the managers of banks who have said so many appreciative things about the value of women's work in banks will offer their women better posts when fully qualified.

Worcester Herald 5. 4. 19

FIGHT THE FAMINE COUNCIL.

The following memorial has been sent to the Prime Minister, Members of the Government and the House of Commons:—

"We, who were not agreed on all questions during the war, are impressed with the sombre reports of famine or threatened famine received from so many and wide-spread districts in Europe. There is no time to waste. There is a possibility of a catastrophe of unexampled horror and magnitude, and we urge the Government, without delay, and as a matter of immediate necessity, to raise the blockade so as to admit a greater freedom in the import of food supplies."

The signatories include: Earl Beauchamp, the Countess of Warwick, Lord Weardale, Lady Henry Somerset, Mrs. Creighton, Mr. John Masefield, Miss Mary Macarthur, and clergy of all denominations, among whom are the Bishop of Hereford, the Deans of Worcester and Carlisle, and the Revs. H. Webb Peploe, H. R. L. Sheppard, and W. Temple.

703/2

WOMEN'S FUTURE.

RECONSTRUCTION MINISTER'S INVESTIGATIONS.

The interests of women in proposed measures of National Reconstruction are being closely watched by a committee of distinguished women who act in an advisory capacity to Dr. Addison, the Minister of Reconstruction. The committee is under the chairmanship of Lady Emmott, and comprises such well-known public women as Lady Birkenhead, Mrs. Deane Streatfield, Miss Harris, Miss Susan Lawrence, Mrs. Pember Reeves, Viscountess Rhondda, Mrs. Symons, and Miss M. J. Tuke. Miss Beatrice Chamberlain was a member till her death, recently.

The committee meet at the Ministry of Reconstruction every week, and take under their survey all questions in which women are primarily or largely concerned. As this field is a large one, in view of the greater place that women are taking in national affairs, the committee is split up into sub-committees to deal with different topics, and the sub-committees co-opt such outside members as may be helpful.

One of the largest subjects to be taken under review is that of the future place of women in agriculture, with particular regard to the recommendations made by the Selborne Agricultural Committee. This committee, it may be remembered, drew special attention in their report to "valuable information received from Mrs. Roland Wilkins" in respect to women's village institutes, and the good work they had done during the war towards promoting the better cultivation of gardens and allotments, the collection and distribution of vegetables, and the creation of interest in co-operative agricultural work. The report added that if, as is anticipated, there is a large increase of small holdings and settlement schemes after the war, women's institutes can play a large part in making the settlers contented, and the schemes successful.

Mrs. Roland Wilkins referred to by the Selborne Committee is the chairman of the sub-committee of the Women's Advisory Council which has been given the task of considering the place of women in agriculture. Working with her on the committee are Messrs. Strutt and Orwin, Prof. Bryner Jones, Miss Macqueen, Lady Gwendolen Guiness and Miss Gladys Pott, as secretary.

Other questions of importance to women which have been taken in hand by the Women's Advisory Committee include domestic service, health and kindred services for women, the co-ordination of authorities dealing with vocational training for women, and certain questions relating to the position of women in the Civil Service.

The scope of the investigations dealing with domestic service referred to the Women's Advisory Committee is "to consider the general conditions in regard to domestic service as affected by the employment of women on war work, and to indicate the general lines on which the available supply of labour for this purpose may be utilised in the best interests of the nation." The inquiry has been divided under four heads:—

1. The training of servants;
2. Distribution;
3. Home helps (i.e., women employed as helps in the homes of working women not employing a regular servant);
4. Organisation and conditions of service, upon which in the first instance reports will be submitted by committees of experts.

As to health and kindred services, the Women's Committee are considering what extensions of the employment of properly trained and paid women are necessary and possible in connection with national health work, and kindred services, and what place can be assigned to voluntary workers in this connection. They are working with Miss Anderson's memorandum on this subject to the Women's Employment Committee as a basis of inquiry. It indicated a large number of different ways in which women might find employment in health and welfare work.

As to the provision of vocational training for women, the Women's Advisory Committee has reported to Dr. Addison on the best methods for co-ordinating, both centrally and locally, and for extending the existing and the proposed provision of training for women.

With regard to women in Government service, the committee has been considering certain points relating to the position of women holding administrative posts in temporary departments, and the possibility of finding permanent openings for such women in the Civil Service.

703/24 703

THE LANCET.

LONDON: SATURDAY, JANUARY 18, 1919.

Industrial Efficiency and Preventive Medicine.

THE physical inefficiency of our industrial classes is one of the spots in our social organisation which, hitherto dark, the searchlight of war has all too brilliantly illuminated. Our national unreadiness for war was most marked not in the fighting forces but in the industrial organisation behind these forces. Our Army may, as regards size, have been "contemptible," but it was constructed on a model which withstood the test of tenfold multiplication. The call of the Army for men, on the other hand, laid bare an appallingly low standard of physique among men of fighting age; and when this call had, so far as was possible, been met, our industries, particularly the munitions industry which supplied the fighting forces with their life-blood, had to rely mainly upon the fit in our population, who were over military age, and much admirable female labour. Then the discovery was made that owing to the conditions of industrial life during the past half-century there were but few skilled craftsmen over the age of 50 who had not already "gone West." Now the war is over, and attention is being given to reconstruction and reorganisation; and nowhere is fresh effort and new work more called for than in trying to ensure for the future generation a higher standard of health among the industrially employed. Two questions call for prompt reply: Who is to be entrusted with the effort which is needed? and How is the effort to be carried out?

The questions are really one, for the methods adopted will to great extent depend upon the agency selected. In the past what has been done to improve the lot of the worker has been carried out by the Home Office administration of the Factory Acts, Shops Hours and Mines Regulations Acts, and the Coal Mines (Minimum Wage) Act, and a decision must now be arrived at as to whether action concerning health and industry in relation to labour is in the future to be administered by an office destined, according to the Haldane Committee[1] to become a Ministry of Justice. If the decision is against the Home Office continuing in charge of the work, should the administration be entrusted as a health question to a new Health Ministry, or as an employment matter to the Ministry of Labour? There is much counsel, and as usual the old adage "In the multitude of counsellors there is wisdom" falsifies itself, because each counsellor counsels differently, and the adage does not indicate how the wisdom is to be sifted out from the multitude. For once, however, on an admittedly difficult question, we have before us advice flowing from two separate sources which is in close agreement. First, the Haldane Committee are definite and explicit:

> "We are satisfied that the inspection and regulation of conditions affecting the health and safety of industrial workers are matters for which the Minister of Employment, and not the Minister of Health, must be responsible to Parliament. ..... The ordinary methods of consultation (between two departments) will probably require to be supplemented from time to time by the appointment of special committees, on the principles which have proved conspicuously successful in the case of the Health of Munition Workers Committee, to advise the Minister of Employment upon problems of industrial health which are new in kind or have assumed a peculiar importance or urgency."

Secondly, the Association of Certifying Factory Surgeons[2] has recently prepared a report upon this subject and state:

> "We think, however, that early arrangements should be made for transferring the whole of the Factory Department from the Home Office to the Ministry of Labour. It appears to us that the Ministry which has the economic problems of labour under its care and direction is the proper body to take charge of occupational health and safety problems, but we are particularly influenced in our view by the conviction that Labour Exchanges could be made into such useful adjuncts to medical examination by securing for young people employment suited to their physical condition. We are also of opinion that the health and welfare measures established by the Ministry of Munitions could be more suitably carried on by the Ministry of Labour than by the Home Office."

Clearly, then, the balance of opinion would favour that the Ministry of Labour (or, as the Haldane Committee prefer it to be called, the Ministry of Employment) should be entrusted with the duty of organising industrial health supervision. There remains for consideration—How is the end in view to be attained? An answer to this question is hardly to be sought from the Haldane Committee, for it was not within their terms of reference, but the report of the certifying factory surgeons contains many valuable suggestions as to the way in which the work could be done by linking up the Employment Exchanges with the Medical Factory Service, especially in relation to juvenile employment. We would here express a word of regret that adults are not more fully considered by the Association of Certifying Factory Surgeons, feeling, as we do, that only by close and intimate association between the Employment Exchanges and the places of employment can any coördinated attack be made upon what is to-day the most serious economic loss in industry—that due to the turnover of labour, and the resulting wastage of workers. Our readers should in this connexion be familiar with the admirable report issued from the Medical Research Committee on the wastage of female labour in munitions factories.[3] Apart, indeed, from the serious loss thus indicated, social economy is not served by sending A 1 men to work which could be carried out by C 3 men, while to send C 3 men to attempt A 1 work is homicidal.

We desire to see every employer of labour with the whole- or part-time services of a doctor at his disposal to advise him on welfare and health

703/25

matters; to examine new workers; to watch over the health of his whole staff; to supervise the hygiene of his establishment as regards ventilation, light, temperature, cleanliness, and first-aid appliances; to advise and help the Welfare Department: to be, in fact, an industrial medical officer of health. Such officers should also be retained to advise the local employment exchanges as to the type of worker to be drafted to this or that trade or process. They should also be employed to conduct the periodical examinations of juveniles industrially employed as will be required under the provisions of the Education Act, 1918, and so to coördinate the school and factory medical supervision. Such local officers would require to be directed and assisted by a medical organisation controlled from headquarters—a nervous system of which the local service would be the peripheral end-organs. The value of such a medical organisation, associated with the Government Department concerned with employment, would be incalculable not only to carry out investigations and assist research into the effect of industrial conditions and hours of labour, but also to influence the adoption of health reform based on sure knowledge so obtained. Probably in the whole field of preventive medicine nothing more urgently calls for action than the establishment of organised medical supervision of employment on sound lines; probably no field promises in return for cultivation a finer harvest of results. In the past unfavourable conditions of employment, overwork and fatigue have caused irritability and labour unrest, impaired physique and disease.

"The subject of industrial efficiency in relation to health and fatigue is in a large degree one of preventive medicine, a question of physiology and psychology, of sociology and industrial hygiene. ..... Without health there is no energy, without energy there is no output. More important than output is the vigour, strength, and vitality of the nation."[4]

Thus the final report of the Health of Munition Workers Committee in the sentences we quote summarises the whole great truth. In the immediate future the nation, as never before, must obtain industrial efficiency through preventive medicine.

Accurate Diagnosis in Appendicitis.

DURING the last 30 years the rôle of the appendix vermiformis in health and disease has been a frequent topic both in medical and lay circles. Before that time little of ill had been laid to its charge; if a criminal, its crimes remained undetected. But at the present time it has become the pathological scapegoat, every pain and ache below the diaphragm casting suspicion upon the appendix; so that the hand of every surgeon is against it. In spite of the attention that it has received the fact remains that the normal appendix has not been sufficiently studied, not only in its anatomy but also and especially in its physiology, and there are questions as to the activities of the appendix which have not, hitherto, received any very definite answers. The means to accurate diagnosis are not yet at our disposal. In the present issue of THE LANCET is an important paper by Dr. E. I. SPRIGGS on the normal anatomy and physiology of the appendix as revealed by the aid of X rays, and the paper is illustrated by accurate coloured drawings and a large number of admirable skiagrams taken by Mr. O. A. MARXER. The X rays have already been employed to a certain extent in the investigation of the appendix but the observations in this paper are more complete and more thorough than anything that has preceded them.

The first thing to be settled by Dr. SPRIGGS and his collaborator was the best material for the opaque meal when it is required to demonstrate the appendix, and it was found that buttermilk and barium sulphate formed the most suitable opaque meal. Moreover, the best results were obtained when the bowel had been previously thoroughly emptied by castor oil. With these preliminaries adjusted, much physiology was made clear by the ensuing observations. In the first place, it became certain that even in health some of the contents of the cæcum enter and leave the appendix, that it fills when the cæcum fills, and that when the contents of the cæcum pass on their way the appendix discharges what it has contained, though sometimes the emptying of the appendix may be a little delayed. In the young, indeed, the appendix may fill and empty several times while the cæcum is still full. It is also certain that in the young the appendix is much more lively than in those who are old. The appendix was seen by Dr. SPRIGGS to move actively; some times the movement occurs as the organ fills, and sometimes without any reference to the passage of material into or out of it. So that we have learned much from these researches as to the conditions of the appendix when it is normal, something of its physiological movements, but, alas! we have learned nothing to enable us to answer the important question whether the appendix has a function or not. That it may be removed without any obvious impairment of health is no proof that it is valueless, for the spleen can be, and has many times been, removed without the least harm resulting, and yet no one would deny that the spleen is of functional importance. The persistence of the appendix, and its active movements, certainly do suggest that it may have some function in the economy of the human body, small though that function may be.

These investigations further afford us much insight into the pathology of the appendix, although such technique can be employed only in cases of chronic appendicitis, for in the acute form the time needed to prepare for and to take the skiagrams must not be spared. But in cases where the diagnosis of chronic appendicitis has not been definitely made, and when there are obscure pains in the abdomen of long duration and uncertain cause, it is all to the good if a diagnosis can be made whether there is or is not definite disease of the vermiform appendix. When sufficient skill

WOMAN DISCOVERS MAN'S SECRET.

By ELIZABETH ROBINS.

"WHETHER the active women of the present find happiness in greater measure than the more passive women of the past," is a man's question.

What Every Woman Knows is that even for the handful of "the privileged" (nearly negligible in any wide survey of the sex) the Passive Life of the women of the past was one of the illusions of men.

The shibboleth of the privileged woman has been her supposed Leisure. The word gave its name to her class. The alleged fact constituted her charm. Part of the ritual of her life was punctilious banishment from masculine eyes of any activity that was not play or "fancy" work.

Even in what was called her sphere the proof of the successful *maitresse de maison* was the fact that the looker-on was unconscious of the domestic machinery.

This ideal was so rigorously lived up to that to this day the most intelligent and sympathetic man has the scantiest idea of the activity necessary on the part of the "passive" woman to keep the household machinery running.

If we compare the so-called "active life" of the woman in an office to-day, or even the woman doing farm, garden, or engineering work, with the "passive" life of the working-class mother of a family, we are face to face with the truly staggering discovery that the longer hours and the heavier labour fall on the "passive" home-tied woman.

If you doubt this, inquire of those who were taken out of their homes (or out of other people's) to carry on men's work in these last years. Inquire of the woman who is now asked to relinquish man's work and go back to her own.

Whether she goes back or not, she is one more of the tens of thousands cured for ever of any illusion as to the comparative weight of the two burdens.

INEVITABLE CONTRAST.

Who is foolish enough to suppose that the most happily married working-class woman will not more and more contrast her life of overwork (attended by that ill-health of the married on which the Insurance Act shed so lurid a light), with the life of the woman who can divide her day somewhat as experience has taught men to do? Will the delicate mother of clamorous children continue to think that only her stout husband needs an unharassed interval for food—food cooked by someone whose business is cooking, and not cooking added to seven or eight other occupations?

One of the great discoveries of the age is the very little work done and the amount of creature comfort and leisure enjoyed by many well-paid men. The woman who braced herself to bear the burden of "releasing a man for the front" often found to her astonishment that she could discharge her new duties in less time and with far less labour than she had been giving to some dull drudgery that had paid her a third as well.

Although employers in replacing men of 25 to 40 passed over trained women of the same age in favour of raw girls from 14 to 19, these mere children by their very childishness let the cat out of the bag. The difficulty of a vast amount of men's work is pure fiction. It is true that when employers can have men back they in many cases—not all—are likely to employ men. But nothing under heaven will ever get the cat into the bag again!

It must have been as far back as early 1916 that the observant began to notice the new look of purpose and animation in the faces of women. We admit that about that time many a home began to show the loss of some "passive" member of the household. The head of the family might be heard lamenting that the servants were "getting out of hand, and everything at sixes and sevens," in the absence of the war-working daughter. She, it now appeared, had run the house. She had kept an eye on the stables, answered notes, written cheques, seen boring callers and played the sedative game with the parent after dinner.

WOMAN'S HAPPINESS.

Her idle life at home was revealed to have been a good deal occupied. But to the person chiefly concerned had it meant happiness (to make no higher claim) that a first-class intelligence should have been put to tenth-rate uses? Who would consider such a life anything but an outrage if inflicted on a boy? Worthy in their limited way as the small "home" services may be, they do not call for the whole-time devotion of a vigorous and gifted girl any more than for the sacrifice (as would instantly be recognised) of a gifted and vigorous boy.

I admit that the educated young woman's power to find happiness in the new activities will be sorely tested till sounder judgments prevail. Happiness aside, how many boys would essay to make a place in a profession on the narrow means grudgingly accorded to the girl for such a purpose? What boy for all his greater physical strength would undertake in addition to his studies the fatigue of buying, preparing, or cooking his own food, making or mending any part of his wardrobe, or even the making of his own bed?

That thousands of girl students accept these terms rather than return to the old life may not mean that they have found happiness. But it means that they have found something precious.

If women are judges of their own happiness (and this is not always allowed) they have answered the question at the head of the column in two ways equally unmistakable:

1. By the alacrity with which they took up men's burdens.
2. By the reluctance to lay those burdens down.

In taking a short cut through a mews this afternoon I came upon a Green Cross ambulance belonging to the Scottish Women's Hospitals. A knot of young women, some in clogs and all in overalls, stood about cleaning and overhauling the car. I stopped and asked what they thought of the Active versus the Passive Life? Fully to answer that question would take the inquirer as far as the car had taken them—into a new world. But this much may be said. Those educated, attractive girls, standing there in the drizzle oiling machinery and polishing brass, spoke of demobilisation with no happiness in their faces.

BENCH A D BOARD-ROOM.

Why Not an Ideal Factory?

By GEORGE W. GOUGH.

THE NEW ECONOMICS.

The Economics of Reconstruction must be new to suit the new age, or there will be no reconstruction and no new age. And the concrete basis on which it must build is that employers and employes are colleagues and not competitors. "Bench and Board Room" must be its motto, not "Bench against Board Room." For employers and workers are like the officers and men of a regiment. The colonel commands and the rest obey, but they all fight, and successful fighting depends on prompt obedience to a colonel who knows precisely how to lead.

So essential is unity, obedience, command, to any army that even the Russian Bolshevists have swept out of existence the regimental "councils," and introduced the old system of insisting that the soldiers should do as they are told and do it at once.

Factories, and works, and mills, and mines, are precisely like regiments in this respect. The "boss" is simply the Colonel of the factory; and, though it is excellent to have a good "boss," it is sheer ruination to be without one I want to see a Whitley Council in every shop, and an Industrial Parliament for every trade; but the people who think that it can ever become part of the functions of such a Council to run the shop, or even to interfere in the running of it, are on the wrong track, that leads to economic dissolution.

The period of acute antagonism between employers and employed had its origin in false economics. Like every other science, economics advance with the years, so that what looked obviously right a generation ago is now seen to be so absurdly wrong that one wonders how any sane person ever believed it. The time has now come when any person, master, man or outsider, who reflects for a few minutes, cannot help seeing that all the old battles were fought on the wrong fields. Profits do not go down as wages go up. It is silly to think you can increase employment, either for yourself or a comrade, by taking ten hours over an eight-hour job, since all you do is to fool away two hours of your own time.

The Ideal Factory.

The sort of thing we may get if we will strive for it is the ideal factory. The only way to get real social progress is to make just such changes, and no more, as are possible under the existing circumstances, and are certain to be fruitful of the good expected from them. They have tried in Russia to improve the social order by smashing it with a hammer, and a nice mess has been the only result. I am averse from smashing anything, and I am healthily critical of all plans and dodges for taking short cuts to the millennium. But what I can see is that precious little would have to be done to turn our existing factories, which are so often full of friction and discontent, into ideal factories.

To begin with the worker in one such ideal factory: he would realise that his first duty was not only to pocket wages but to earn them, and that every unearned penny he got, whether by individual or trade-union activity, was a dead-weight debt on the factory; and consequently that for every unearned penny he got somebody would have to go short of an earned penny; and that, again as a certain consequence, this game could not go on very long or very far without shutting up the factory and ruining everybody.

He would further realise that the employer's work was just as essential as his own, and a great deal harder to do. The notion that any fool can run a factory is just futile nonsense. Having seen this, the worker would also see that anything the employer took out of the factory as his "profits" was just as legitimately earned as the worker's wages, and in the same way, by good, honest work. Further he would realise that the employer took all the risks, so that while his own wages were certain on a Friday, the "boss's" wages at the end of the year were not so certain.

The Ideal Employer.

Now for the employer in our ideal factory. Well, his outlook would be easy, since he had the ideal workers just described. He would make it the basic principle of his factory that the most unskilled worker in it should receive a wage sufficient as prices then ran, to ensure him in his leisure hours a life that was worth living, as a man and a citizen if he chose—as he would, being ideal—to spend them wisely, and from this base wages would be graded upwards to fit superiorities of skill, capacity and responsibility.

No industry must be allowed to become parasitic. It must feed on itself, not on other industries or on the general public. An industry becomes parasitic in two ways:—(1) When its workers get out of it a wage which does not allow them to reach a proper standard of life, so that, in one way or another, they have to be assisted from other sources, e.g., the rates; (2) when its workers, owing to the "pull" they have, are enabled to exact from their employers, that is to say, from society, more in wages than they return in product. In both cases, there is unfairness to society, and the ideal factory would not allow of either kind of parasitism.

In short, in the ideal factory the worker would say "How much can I do?" and the employer would say "How much can I pay?" And both would realise that in this way they did the best for themselves and for one another.

And can any one tell me why this should be nothing but an ideal?

Chapham Observer
17. 4. 19.

EDUCATION FOR WOMEN.—The granting of the vote and the opening up of nearly every profession to women causes the question of their education to be more important than ever. At the same time there are many facilities for the education of women, and of girls after they leave school, in existence, and that they are aware of them is evidenced by the number of enrolments at the Women's Evening Institute, New Park Road, Brixton Hill. Over 800 students, the majority of whom are adults, have applied for instruction in various subjects. In face of the declaration, so often made at the present time, that the modern woman does not like to be considered domesticated, it is interesting to note that the most popular subjects are first aid, home nursing, dressmaking and millinery. The summer term commences on April 28th, and classes will be held on Mondays and Wednesdays. The responsible mistress, Miss E. C. Massey, has a staff of thoroughly expert teachers under her direction, and, in addition to those mentioned above, the subjects taught include cookery, drawing, English, gymnastics, singing, violin, and domestic handicraft. A nominal charge of about two shillings is made for a course of studies, and all who are interested should communicate with the Responsible Mistress. On Saturday evening a students' concert was held, which attracted a large audience of parents and friends. Songs and recitations were rendered by a number of the students, and each item was thoroughly enjoyed. It is worthy of note that one of the shields offered by the British College of Physical Education at the Guildhall last March was won by the junior physical exercise classes of this Institute.

Hatless Women.

The no-hat-at-public-places craze among women seems to be increasing rapidly, which perhaps is just as well in these days of expensive millinery.

* * *

At several public meetings I have attended recently I noticed hatless women speakers on the platform Lady Rhondda, Miss Mary Macarthur, and Miss Susan Lawrence are all women speakers who belong to the hatless brigade.

* * *

A barrister tells me that at a recent case he noticed that several of the women witnesses appeared hatless, and they were all well dressed, too.

LADY FRANCES BALFOUR'S VISIT.

"The Future of Women."

Mrs. Ramsay, of Fareham (President of the Women's Citizen Association), took the chair at a public meeting held at the Greenrow Rooms on Tuesday evening in connection with the Portsmouth Women's Citizen Association, when Lady Frances Balfour gave a highly interesting address on "The Future of Women." There was a crowded audience, and Mrs. Ramsay, in introducing the speaker, said that Lady Frances Balfour was well-known in connection with women's suffrage, and they had to thank her for what she had done for women.

Lady Frances Balfour said that the women had been classed with Serfs, as they had not the right of freedom, but now they had become free citizens. The women had got the vote, and it had been bought for them by the blood of their brethren. It came to them through the war, through the lives that had been laid down, through the hearts which had been broken of the women of this country. After Parliament had granted women the vote they had opened their doors to them. She was in the House of Commons the night this was carried, and declared that there was quite a panic among the members. The measure was carried by 11 to one. Every representative body in the country was now open to the women citizens as well as to men. Both men and women ought to use the votes they had got. In her opinion local government was more important than Parliamentary Government. Reconstruction was in the air, and if that was going to begin with any real purpose it must begin from the very bottom. It must be based in the lives of people. It was no good taking up reconstruction as a pack of cards. It was the same men, women, and country that they had to reconstruct as existed before the war. Some of the plans of reconstruction were a great deal worse than the state of things which existed. They had, she said, a most extraordinary tendency to look upon the State as a kind of parent. The State, they thought, had an enormous purse which they could put their fingers into, and they considered they were not receiving charity. State aid was the same as Poor Law relief. There was a great feeling just now that the race must be replenished and the children brought up under better conditions. They could not have happy homes unless the women and children were living in good conditions. The State had interfered enormously in the home. Everything that disintegrated the home was a menace to the Empire. Why had the Bolshevists taken away the individuality of the women? Because they wished to destroy the family, because they wished the State to own the child. The family was all that was possessive in the State. They wanted, she said, to make the divorce between men and women more just. The conditions under which they had lived they had not been responsible for. It had taken the country 15 years to believe that women Guardians ought to look after the care of the children. Those who had the vote should do their best to see that things were thoroughly reconstructed. They could not reconstruct by law unless they got the people themselves to care about reconstruction. Some of the greatest unrest had been in Scotland, and it had been of a very dangerous condition. Glasgow people were living in very bad conditions. The children showed the want of light and air. There they had the unrest, the unrest of minds and crippled bodies. They must do all they could to support these citizens, who were standing for the right. They wanted women to represent them who cared for the people they lived amongst and took an interest in. The women were the race bearers, the race rearers, and the nation would look to them to replace those torn and wasted regiments which had gone out to fight for their homes. The industrial unrest, she thought, was healthy, because those classes wanted their homes raised to a better standard.

Afterwards many questions were asked, and answered by the speaker.

On the motion of Mrs. W. H. David, seconded by Mrs. Whetton, a vote of thanks was passed to Lady Frances.

The World of Labour.

The Berne Labour Policy.

The Labour and Socialist Conference held at Berne last month resulted in an achievement of great significance. It reconstituted the Internationale, thereby tying up the ends that were broken by the great war, and making a new beginning of fraternity among the democracies of Europe. And not only of fraternity, but of a practical understanding between the workers of the different countries on industrial questions. The conference devoted a large portion of its time to the drafting of a world labour policy, and the conclusions they arrived at are of prime importance. First place is given to education. The resolutions ask that primary education be made compulsory in every country, that higher education be free and universally accessible, and that provision be made for vocational and technical training. This is the practical interpretation of the doctrine of equal opportunities. As regards preparation for the work of manhood and womanhood, society is no longer to be stratified according to wealth and social position. As a corollary the conference asks that the preparatory years of life be kept sacred. It would make it illegal for any child under fifteen to be employed in an industrial occupation. It would further impose a partial ban on employment between the ages of 15 and 18, limiting the working hours to six, to permit of continuation training.

Working Conditions.

For workers in general throughout the world the conference proposes a strict limit of an eight hours day or a forty-eight hours week. While this stipulation appears retrogressive in the light of British industrial movements, it represents a considerable advance for many countries. And it is to be remembered that the conference was outlining a charter, to be converted into an enforceable code of world-wide law by the League of Nations. It is designed for the protection of workers, such as those in tropical lands, whose organisation is impotent, as well as to guard advanced nations from the competition of sweated labour. A Saturday half-day and a workless Sunday are included in the proposals, and a variety of suggestions are made in regard to home industries. For the latter wages boards are recommended, while it is asked that the right of all workers to combine and form associations be safeguarded. The Berne Conference is against the prohibition of emigration, though it admits the right of a State to make immigration regulations. State insurance against industrial accidents and unemployment, and labour exchanges in every country with co-ordinated action, also find a place in the proposals. The resolutions adopt the principle, as between the sexes, of equal pay for equal work, but do not attempt the impossible task of fixing an international standard of wages. They accept the basis that remuneration shall afford a proper standard of living, and would dispose of disputes as to amount by the creation of wages boards, with equal representation of employers and employees. These recommendations have been laid before the Labour Commission of the Peace Congress at Paris, at which they have received serious consideration. The Berne week has proved more fruitful than some of us perhaps imagined.

I.L.P. Conference.

An ambitious programme is being arranged for the twenty-seventh annual conference of the Independent Labour Party, which takes place April 20-22, at Huddersfield. One of the most pressing issues of the day will be brought forward in a resolution relating to coal. This will call upon the Government to take immediate steps to bring down the price to a level consistent with the cost of production, and will therefore be a direct challenge in regard to dead charges, such as royalties, which are not paid for services rendered. Other subjects to be dealt with are national finance, land nationalisation, profiteering, conscription, provision for the discharged and demobilised, housing and rent restriction, secular education, foreign policy, disarmament, Allied intervention in Russia and Germany, industrial and political unity, hours of labour, Ireland, prison reform, military training in schools, proportional representation, and amendments to the franchise.

A New Standard of Salaries.

It is no doubt felt by many people that the fixing of a standard rate of wages is not altogether satisfactory. The spending power of money fluctuates, and not always in accordance with actual economic conditions. Coinage not being a constant measure of value, a standard wage that is satisfactory to-day may be otherwise under the conditions of to-morrow, and the ideal is a scale that would automatically follow the variations in spending power. The difficulty is that no automatic method has yet been invented which would give adequate security to the workers. If a plan were adopted it would have to be controlled jointly by employers and employees, and, in practice, would hardly differ from the present system of negotiations between organised capital and organised labour. However, the method has been adopted by one great company, the South African Gold Trust, and the result of the experiment will be watched with critical interest. The bonus which is now enjoyed by the staff is to be continued, and to be regulated in future by the cost of living. By agreement between the company and the staff, Sauerbeck's Index figures are to be the guide. The existing bonus is to be represented by the index figure at the date of the agreement. After that the salaries will rise or fall according to the index, but it is provided that they shall never be less than a certain minimum.

An Enlightened Scheme.

The following extracts are from a suggested programme of post-war reconstruction: "The labourers must be given an interest in the success of every enterprise by a system of profit-sharing, by the building of garden cities for workmen, and by other privileges. The minor industries which do not require large capital should be handed over to the ownership of workmen and groups of workmen, who should be absolutely independent. For small industries it will be necessary to build model factories. If the introduction of a new industry appears to be useful and profitable we shall be obliged to find skilled and experienced workers for it. . . . Workshops will have to be set up, either by private or by national initiative, the aim of which will be to prepare skilled labourers . . After experiment has shown that a new industry is profitable for labour, it should be handed over to a labour group or to a co-operative society. . . . An industrial bank and a national technical bureau for technical inspection of all industrial workshops are of primary importance. . . . . We are now on the brink of a social revolution. The time has come to see to it that in the construction of our future state we should not repeat the old mistakes. By uniting industry with agriculture we shall be enabled to make the labourer independent; to raise his physical and moral standard, to increase his diligence and working capacity, and to neutralise the injurious effects of factory life on his health. To attain this object we must found garden cities for labourers, where they will acquire, by payments in easy instalments, pieces of land suitable for growing fruit and vegetables, houses, and also small workshops with electrical power." The writer of this is a Jew, and the country he is concerned with is Palestine. The land that once flowed with milk and honey is thus again raised to the rank of a Promised Land, or at any rate of a land of promise.

Chaos and a Way Out.

The industrial position is compelling us to do some very swift thinking, for we have travelled beyond the question of the scale of wages to that of the future control of the business of production and distribution. There has been a gradual approach to this point from the first occasion when a trade union was strong enough to declare a strike. The final and decisive factor is the union of force in the Triple Alliance of miners, railwaymen and transport workers. The National Guilds League, which has an interesting plan for reorganising industry on democratic lines, argues that Labour has, in fact, potentially deposed the capitalist owners from their dominion. If so, runs the argument, then industries require a new form of direction. To the suggestion of nationalisation the League offers two objections: the first that the State, as employer, has no more control over Labour than the capitalist employer, and the second that nationalisation brings with it a fresh set of evils in the way of bureaucracy. In fact, that Labour can be controlled only by itself is the conclusion, to fit which the League produces its scheme of National Guilds. It would transfer the control of industry from private enterprise to an organisation composed of all grades of workers, including, of course, the overseers, accountants, and commercial heads. It recognises that before such a scheme can be adopted the workers must be prepared for their new responsibilities. But the League contends that this condition is already fulfilled in the case of mines and railways, and that for them this Guild scheme is the only way out of chaos to order.

Miss Mary Macarthur.

Miss Mary Macarthur is leaving for America by the "Megantic" on the 29th for rest and change. She has been granted leave of absence for that purpose by the Women's Trade Union League, of which she is the secretary.

RECONSTRUCTION IN AMERICA.

Important Pronouncement by the National Catholic War Council.

NEW ARCHBISHOP OF NEW YORK.

The subject of national reconstruction is occupying the attention of Catholic leaders in the United States, and an important "review of the problems and survey of the remedies" is made by the Administrative Committee of the National Catholic War Council in a pamphlet on "Social Reconstruction."

"The deep unrest (says the Council) so emphatically and so widely voiced throughout the world is the most serious menace to the future peace of every nation and of the entire world. 'Great problems face us . . . they must be met and solved with justice to all." This review is signed by their Lordships the Bishops of Rockford, Toledo and Charleston, and by the new Archbishop of New York.

It is not expected that as many or as great social changes will take place in the United States as in Europe. In the States neither the habits of thinking nor the ordinary ways of life have undergone a profound disturbance. In Europe, on the other hand, the devastation, the loss of capital and of men, and the changes in individual relations have been greater. Moreover, the better industrial and social condition of the working classes of America constitute an obstacle to anything like revolutionary changes.

The National Catholic War Council reviews the various proposals for reconstruction which have been put forward in England, and pays special attention to the deliberations of the Interdenominational Conference of Social Service Unions, comprising ten religious bodies, which spent more than a year formulating a statement on social reconstruction. The statement of the Interdenominational Council points out specific remedies for the evils that it describes; specific measures, legislative and other, by which the principles may be realised in actual life. Attention is drawn to the important summary and analysis of this statement which is contained in the Catholic Social Year Book for 1918.

Women's Work.

The first problem in the progress of reconstruction is the industrial replacement of the discharged soldiers and sailors, and it is suggested that many men should be assisted by Government loans to establish themselves as farmers. This, it is pointed out, would tend to lower the cost of living by increasing agricultural products. The whole problem of unemployment should be dealt with by a national system of Labour Exchanges.

Of the important problem of women's work the Committee says that mere justice, to say nothing of chivalry, dictates that those women who took the places of men during the war should not be compelled to suffer any greater loss or inconvenience than is absolutely necessary. It lays down that no woman should remain in any occupation that is harmful to health or morals, and adds that the proportion of women in industry should be kept within the smallest practical limits. But those women who are engaged at the same tasks as men should receive equal pay for work of equal quantity and quality.

The Committee considers also the question of wage rates, and recommends that the general level of wages attained during the war should not be lowered; first, because the average rate of pay has not increased faster than the cost of living, and secondly because a considerable majority of the wage-earners were not receiving living wages when prices began to rise in 1915. Even if the prices of goods should fall to the 1915 level the present rate of wages would not exceed the equivalent of a decent livelihood in the case of the large majority. The exceptional instances to the contrary are practically all among skilled workers. A living wage is not necessarily the full measure of justice. In a country as rich as America there are few cases in which it is possible to prove that the worker would be getting more than his due if he were paid something in excess of the ethical minimum. On grounds both of justice and sound economics we should give our hearty support to all legitimate efforts made by labour to resist general wage reductions.

The Legal Minimum Wage.

During the war the cost of living has risen at least 75 per cent. above the 1913 level, although the upward trend was checked by the Government regulation of prices in the case of a few necessities. The Committee observes in this connection that Government competition with monopolies that cannot be effectively restrained by the ordinary anti-trust laws deserves more serious consideration. More important than any Government regulation of prices would be the establishment of co-operative stores, the enormous toll taken from industry by the middleman being now fully realised. The Committee points to the success of co-operative stores in England and Scotland. The co-operative stores have the additional advantage of training the workers in habits of saving, in careful expenditure, in business methods, and in the capacity for co-operation.

The Report notes with satisfaction that there is no longer any serious objection by impartial persons against the legal minimum wage. It goes on: —

> The several States should enact laws providing for the establishment of wage rates that would be at least sufficient for the decent maintenance of the family, in the case of all male adults, and adequate to the decent individual support of female workers. In the beginning the minimum wages for male workers should suffice only for the present needs of the family, but they should be gradually raised until they are adequate to future needs as well. That is, they should be ultimately high enough to make possible that amount of saving which is necessary to protect the worker and his family against sickness, accident, invalidity, and old age.

Until this level of legal minimum wage is reached the worker stands in need of insurance, and the Committee recommend that the State should make comprehensive provision against industrial disability. So far as possible the insurance fund should be raised by a levy on industry, and the industry in which a man is employed should provide him with all that is necessary to meet the needs of his entire life. Any contribution to the insurance fund from the general revenues of the State should be only slight and temporary. No contribution should be exacted from a worker whose whole wage is below the present needs of himself and his family, for such a contribution could only be made at the expense of their present welfare.

> Any insurance scheme, or any administrative method, that tends to separate the workers into a distinct and dependent class, that offends against their domestic privacy and independence, or that threatens individual self-reliance and self-respect, should not be tolerated. The ideal to be kept in mind is a condition in which all the workers would themselves have the income and the responsibility of providing for all the needs and contingencies of life, both present and future.

Equality of Opportunity.

Vocational training also has the attention of the Committee, which declares that the vocational training should be offered in such forms and conditions as not to deprive the children of the working classes of at least the elements of a cultural education. A healthy democracy cannot tolerate a purely industrial or trade education for any class of its citizens. We do not want to have the children of the wage-earners put into a special class in which they are marked as outside the sphere of opportunities for culture.

The subjects of child-labour, labour participation in industrial management, and the housing of the working classes have also been considered by the National Catholic War Council, and its conclusions are set out in the report which is before us.

The Council concludes that the present system of private ownership is not likely to be supplanted by collectivism at a date sufficiently near to justify any action based on the hypothesis of its arrival. Nevertheless the present system stood in grievous need of modification and improvement. Its main defects were inefficiency and waste in production and distribution, and inequality in the reward of labour. Co-partnership is recommended. To prevent excessive gain by a small minority of privileged capitalists, the remedy was to be found in the abolition of monopolistic control of commodities, heavy taxation of incomes, excess profits, and inheritances, for "human beings cannot be trusted with the immense opportunities for oppression and extortion that go with the possession of monopoly power."

Continued

703/3

The employer has a right to get a reasonable living out of his business, but he has not right to interest on his investment until his employees have obtained at least living wages.

On the other hand, the employee must realise that he owes his employer and society an honest day's work in return for a fair wage.

Army Bishop Succeeds Cardinal Farley.

The new Archbishop of New York is the Right Rev. Patrick J. Hayes, Titular Bishop of Tagaste, and Ordinary of the United States Army and Navy. He was auxiliary Bishop of New York at the time of the death of Cardinal Farley, whom he now succeeds.

A native of New York City, and only fifty-one years of age, Archbishop Hayes has had a notable career in the priesthood since his ordination twenty-seven years ago. After his post-graduate course at the Catholic University he was appointed assistant to Mgr. Farley, who was then a parish priest in New York and Vicar-General, and when Mgr. Farley became Auxiliary Bishop, and later Archbishop of New York, he chose Father Hayes as his secretary. In rapid succession he made Father Hayes Chancellor and first president of the Cathedral College, recommended him for the honours of doctor of divinity and domestic prelate, and in 1894, at Cardinal Farley's request, the Holy Father appointed Father Hayes Auxiliary Bishop of the diocese.

Appreciation by a Friend.

A personal friend of the new Archbishop writes to us:—"Except through his articles in the Catholic Encyclopædia, the new Archbishop is not as yet well known over here in England. The British Catholic Mission remember gratefully that he was the first Bishop whom they met in America and made the first speech of welcome which set in motion that astonishing display of hospitality on the part of the Catholic Hierarchy. In America, Mgr. Hayes has made his fame by his work as Chaplain-General during the war. Faced by an exceedingly difficult task, he has disappeared for a year behind a mountain of detail. His was the hand that smoothed matters between the Government and the Church. He was the guiding member of the War Council, and the results may be gauged by the fact that the Catholic soldier received the fostering and faithful ministration of his Church both in America and in Europe. There was no hitch in the Chaplain's department, and the Knights of Colum-

703

emergency possible for laymen to meet on the one han while on the other, the chaplains, of whom Archbish Hayes was the Ordinary, have created a splendid reco in the spiritual sphere.

"The Archbishop's life has been lived largely in t background of his friend the late Cardinal Farley. T modesty which he showed as an ideal assistant Bish concealed a strength that only full authority is need to bring into the open. As Chaplain-General he pass through an Episcopal novitiate that gave him more e perience than many years of normal diocesan wor Important and immediate decisions had to be mad which might make or mar the record of the Church war work. No flaw has been found in Catholic w work, to the surprise of friend and critic. A keen-eye sanity and an invisible purpose have been workin behind the scenes, and they are generally attributed the new Archbishop. Many happy omens attend h elevation. One is cheering to the Irish commnuity, th the Gaelic equivalent of Hayes is the same as that Hughes, and the first and greatest Archbishop of Ne York was a Hughes."

Archbishop Ireland's Successor.

Archbishop Ireland's successor in the See of St. Pa —the Right Rev. Austin Dowling, Bishop of Des Moines —has gained a reputation for thoroughness in organisation and for executive ability of a high order. He is a scholar of high attainments, and his zeal for education was expressed by his founding of the Des Moines Catholic College. A sum of £40,000 was required for the purchase of an institution which was formerly in the hands of the Baptists, and his Lordship raised the amount by popular subscription. Bishop Dowling was editor of the *Providence Visitor* for a couple of years, and in his writing showed a depth of thought and a lightness of touch which brought popularity to his paper. He introduced the Catholic Women's League to his diocese, a short time ago, and the movement of

Tribute to Cardinal Gibbons.

Our Washington correspondent writes: "The Catholic University of America, of which his Eminence Cardinal Gibbons is president, witnessed the deferred celebration of his Eminence's Golden Episcopal Jubilee (to felicitate him on which a distinguished delegation from England, headed by his Lordship the Bishop of Northampton, crossed the sea some few months back), with the most brilliant religious function in the history of the American Church. Not since the days of the Third Plenary Council of Baltimore, in which, too, his Eminence was the central figure, has there been such a scene as that which was presented that day by the interior of the monastery church of the Franciscans (on the University grounds) to the eyes of the Catholic laity who thronged its vast spaces. In the long and brilliant procession were two visiting cardinals, the Papal delegate, seventy-three archbishops and bishops, the assistant Papal Secretary of State—the special envoy of his Holiness—monsignori and priests from every diocese of the country, and members of the various religious orders. His Eminence Cardinal Gibbons celebrated the Mass.

Two-thirds of the church, which resembles in style some of the great Roman churches, and, by reason of its architectural beauty and rich adornment, formed an appropriate setting for such an event, was transformed into a sanctuary which offered a striking and beautiful picture. The three Cardinals, Cardinal Gibbons, Cardinal Begin, and Cardinal O'Connell, the Apostolic Delegate, and the Assistant Papal Secretary of State occupied five thrones, the seventy-three bishops were ranged in front of the altar (which stands at the centre of the church), the monsignori and priests to the right, and the faculties of the University (in academic robes) to the left. The stately movement of the Pontifical Mass, the rich colour-scheme of cardinalatial crimson and ermine, and episcopal purple, the simple, elegant adornment of church and altar, and the finely interpretative gladness of the Mass music, formed a setting for this act of thanksgiving and rejoicing which made one's heart burn within one. The vestments worn by the ministers of the Mass were those used by Cardinal Gibbons' great predecessor in the See of Baltimore, Archbishop Carroll, a hundred years ago.

The sermon, of which it is sufficient praise to say that it was worthy of the occasion and of its subject, was delivered by his Grace Most Rev. Geo. W. Mundelein, D.D., Archbishop of Chicago. After sketching briefly but with consummate effect the career of the Cardinal, and its marvellously far-reaching influence for good in Church and State, his Grace concluded with these words: "This, then, is our prayer, that you may still stay with us, even though evening is drawing nigh. And when, in God's own time, there comes for you the night, when you may no longer work, when the Master whom you have served so well will have placed you with the crimson-clad heroes of Holy Church, with Charles Borromeo, with Peter Damian, with Bonaventure, in the *gloriosus apostolorum chorus*, we who may be left behind will lovingly write your epitaph; not a voluminous history of your great achievements, not a lengthy recitation of your many virtues; just two words that will tell the story of your eventful life, just two things that will point out the things dearest to your heart, just two words that will best picture 'one who, after the service of God, has desired nothing so much as to serve his country'—just two words: '*Deo et Patriæ*,' to God and Country."

After the Mass, the prelates were entertained at dinner with his Eminence in the great dining hall of the University. During the dinner, Archbishop Cerretti presented to the Cardinal the letter of his Holiness, conveying his felicitations on the happy event of his Jubilee.

WOMEN AS BUSINESS LEADERS.

SOME EXAMPLES AND A MORAL

(FROM A CORRESPONDENT.)

There is a distinct divergence of opinion whether or no women will be leaders in the commercial world of the future. The divergence of opinion is not a sex one. There are men who, having found the right woman, believe firmly in the business capacity of the sex; and men, on the other hand, who have no intention of allowing any woman to control any part of their business or to grant that any woman would be capable of such a feat.

There are quite a number of women, too, who, being of inferior intelligence themselves, would not accept direction from a woman and refuse the woman "boss." It is this group of women which forms the principal argument in the case put forward by the men who refuse to acknowledge that women can ever become leaders in business. "Women won't follow women," they say, and when they have said this they think they have said all. But if they acknowledged that many men object to women holding big commercial positions and are reluctant to work under them, they would be nearer the truth. The woman who objects to a woman "boss" objects to her in her heart of hearts because she feels that men do not like working under a woman, and, being of the sheep-grade in business as in fashion, follows the lead of such men without testing on what it is based.

A well-known business man expressed his views a day or two ago to two women, one of whom, unknown to him, had built up within the last two years a wholesale business entirely staffed by women, of an exclusive kind, with a large turnover. His arguments were:—"A woman can never be a leader in business because she is a woman and carries her sex's capability for worry into her business life. If things go wrong at home she lets it influence her attitude towards her staff, so that they are uncertain any day as to how they will be treated. Women cannot stand this excess of emotional storm added to their day's work, and therefore prefer the male 'boss,' who is more level-headed and forgets his home except when he is in it."

The obvious answer was that all women are not the daily subjects of domestic worries, any more than that all men are bankrupts. The business woman instanced a very well known woman who has opened shop after shop in the West-end and exclusive shopping centres and has great work-rooms for the making of frocks which cost a little less than French models and are worn by some of the best-dressed women in London. Reluctantly he agreed that she might be an exception. The business woman he was speaking to did not give any inkling of her own claims to distinction, yet her work-rooms are filled with women who serve her as they would serve no man, her unruffled spirit and her kindly humour as well as her unerring judgment making her an ideal employer.

Recently a young university woman who had taken her LL.B. degree and looked forward to a career of a very different sort found herself forced to take over a licensed house owing to the sudden death of her father and the constant illness of an invalid mother. She has made it a success. Her barmen and cellarmen give her good service, and see nothing extraordinary in her having taken over her father's business. There are many women buying on a large scale for London and provincial firms who are quite capable of managing big businesses if they were given the chance, but the majority of them will never have the opportunity, as men are reluctant to give them directorships or put up capital for them. In one of the largest firms in London, however, there was recently a notable exception to this, when a lingerie buyer, who had the biggest turnover of any department in the house, was made a director lest she should be tempted to go over to some other firm.

OUT-OF-WORK WOMEN,

WAR RECREATION SCHEMES MAINTAINED.

The value of the instruction centres which were officially established for unemployed boys and girls has been recognized, but the activities which are bridging over the passage of industry from war to peace, in the case of women above the age of 18, are less well known. It has been realized that the responsibility of the State with regard to the women who came into the factories during the war is not discharged in full by the payment of an out-of-work donation, and the transference of the Welfare Department of the Ministry of Munitions to the Ministry of Labour has been accompanied by the direction of attention to the needs of the women who have been demobilized.

The position of the discharged woman munition worker is one of peculiar difficulty. The loss of her job means not only the cessation of wages but also of comradeship and organized recreation. Her labour, which she could at one time regard as of national importance, is now a drug in the market. The situation is one which might easily create an atmosphere of unrest, and the protection of demobilized women, which is being quietly carried on all over the country, is therefore of considerable social importance. Among the methods adopted to deal with the problem is the opening of clubs during the day and evening in those towns where it is known that numbers of women are drawing out-of-work pay. Many of the clubs are situated near to employment exchanges, and at these institutions or at rooms rented for the purpose, the women can rest or wait their turn for registration or payment at the exchange. Arrangements have also been made for babies to be cared for while their mothers visit the exchanges.

Where discharges are still taking place at the munition factories, and large numbers of girls are known to be travelling home, welfare officers are attending at the stations to see parties of girls safely away. For girls travelling at night waiting-rooms are specially set apart at the stations. In districts where discharged women and girls are seeking other work in the same locality it has been arranged that the hostels used during the war shall be kept open for their use until they find work. Such hostels are available at Woolwich, Coventry, Gloucester, and Bristol, and the women can live in them at the usual rates and under the protection of hostel supervision. Similar protection exists for girls living in lodgings who are seeking for work in munition areas. Another useful form of assistance is made possible by a special fund belonging to the Welfare Section of the Ministry of Munitions. This is now being applied to girls seeking to get into domestic service in the munition districts, and who have not got the necessary clothes nor the money with which to buy them.

More interesting, perhaps, than anything else is the fact that many of the recreation schemes which brightened the lives of war workers are still in operation, and care is taken that ex-munition workers are allowed to share in them. Various towns have been circularized by the Welfare Department asking that, where civic schemes are instituted, clubs or recreation centres opened during the war shall provide accommodation for women discharged from factories in other districts and who come to the town. Birmingham, Coventry, Liverpool, Leeds, Newport, Sheffield, Southampton, Swansea, Stafford, and other places have agreed to offer hospitality and recreation to out-of-work women as a result of this appeal. In some cases clubs in munition areas have been taken over, on the closing of the factories, by the Y.W.C.A. or other social workers, or even by the local authorities, and where this has happened the Welfare Section, conditional on ex-munition workers being received, has given assistance, by a grant of money or in some other useful way.

703

PEACE WORK OF WAR FIRMS.

MUNITION MAKERS' NEW ACTIVITIES.

While the unemployment figures are likely to remain high for some time to come, and the payment of the out-of-work donation steadily averages more than a million a week, the work of trade reconstruction is quietly proceeding. Slowly but perceptibly the world of industry is being remade.

From one end of the country to the other munition factories are being closed, dismantled, and then adapted and refitted for the work of peace. The manufacturers concerned are not saying very much during the period of transition, but when a full account can be given of the changes which are taking place there will be an interesting story to tell. This is made clear by the information already available of the many directions in which industrial activities are seeking a new outlet.

If swords are not being beaten into ploughshares, there is at least one firm in the South of England which has turned from the manufacture of Stokes bombs to the production of ploughs and spare parts for agricultural machinery. Other munition factories in the southern counties are now turning out dynamos and electric fittings, "art" bronzes, drop-stampings, oil engines, and even lace. From the extreme North of England a report is received of a firm which has cleared out its shop, used in war time as a cast-iron shell foundry, and refitted it for the manufacture of railway material, castings for marine engines, and colliery plant. Another munition factory is fully occupied with the manufacture of wire-rope machinery, and there is a firm which has reverted from bombs to railway appliances and signalling apparatus.

From Yorkshire comes news of a turnover from bombs and shrapnel shell to gas and steam pipes, general shipyard castings, and builders' ironmongery; and from shell-work to the manufacture of railway wagons. Bottle-working machinery is absorbing the attention of another ex-munition firm in this area, while standard clothing for civilians has replaced the weaving of khaki cloth in the Yorkshire mills. Factories in the East Midlands are going back to the production of woodworking machinery, the making of pumps, sewing machines, cranes, agricultural machinery, and electrical plant. In other cases German industries, such as the manufacture of sugar machinery, bootlaces, paper d'oyleys, and fish-plate papers, have been undertaken.

From Shells to Oil Cake.

In the North-West area there is an abundance of work at the ports in connexion with ship repairs and general wheelwrighting. One firm has passed from the making of 18-pounder H.E. shells to the manufacture of propellers for motor-launches and small steamers, and another firm previously engaged on similar war work has dismantled the special machinery for shells and is now manufacturing oil cake. There is a firm, too, in the district which is specializing in brick-making machinery and is likely to establish an industry of some importance, which should ultimately provide considerable employment. One factory in the North-West area is converting fuse cases left over from war contracts into ornaments. This is accomplished by the addition of three legs and a coat of electro-copper.

In the Metropolitan district a manufacturer of small arms is producing a hay and straw baling press, and another firm, until recently busy with munition work, has settled down to the manufacture of food machinery. Aircraft companies in the area are hoping to develop the aeroplane industry on commercial lines.

Scotland is actively engaged in turning from war to peace industries. One firm is specializing in the manufacture of internal combustion engines suitable for fishing boats, a class of machinery which before the war was mainly imported. In the North-east of Scotland a factory has turned from munition work to the production of chocolate machines, an industry once claimed by Germany, while in Glasgow war output has been superseded by toy-making, which gives employment to a number of discharged soldiers. An instance of adaptability is recorded in South Wales, where a firm is utilizing machinery, associated with the finest precision in war work, for the manufacture of micrometer gauges of an improved type.

The Future of Women.

The future position of women in many industries has yet to be determined by the trade unions, but arising out of the present transition there are indications that women have their own peculiar value in the manufacturing world. A firm in Scotland, for example, that is absorbing its staff of war workers on the post-war work of pump-making, is retaining women employees, who have given the greatest satisfaction during the last two or three years. There is even a report of a steel foundry in the North of England finding peace employment for its female workers. An unusually appropriate way of finding fresh duties for women employees has been developed by an aircraft firm which, during the transition period that must intervene before the construction of passenger aeroplanes becomes a definite industry, has arranged for the temporary fitting up of a shop where the women can fill in their time making ready-made blouses. The experiment, it is stated, is proving quite successful.

Toy-making has been mentioned, and this seems to suggest an industry where women's work might be used to a much greater extent than is now the case. The value of the import of toys into the United Kingdom in 1913 was £1,452,700. Openings, we understand, can be provided for the training of girls who are willing to take up this craft. The work is regarded as peculiarly suitable as a seasonal occupation, for women living in rural districts. The Germans have shown that toys can be made in the homes of the people, and the spread of a toy-making movement in our English villages might lead to the complete capture of a former enemy monopoly.

Manchester Despatch 5/5.19.

WHY NOT WOMEN JURORS?

The question of allowing women to act as jurors has recently been discussed by several provincial City Councils, and memorials on the subject are being sent to the Prime Minister.

Of course, there will be considerable diversity of opinion on this question. Women themselves have always thought the innovation would be beneficial to their sex and in the interests of justice generally. Years ago the Women's Labour League discussed a resolution urging the Government of that day to make it a legal obligation to empanel women on all juries where matrimonial cases were to be tried. It was suggested also that breach of promise actions should be tried before a woman judge and twelve women jurors, or that there should be a mixed jury of six men and six women.

In America women have long taken a share in the administration of justice by serving as jurors, and it has been found that juries of women are sterner and more logical than men. "They appear," says an authority, "to be consistently anxious to punish the guilty, and do not seem to be swayed so much by the possibilities of doubt which so often influence the men."

The State Attorney of Illinois declared on one occasion that it was absolutely essential in the interests of justice that women charged with murder should be tried by women jurors. "Even when the evidence is overwhelming," he said, "women cannot be convicted in the United States on any charge of murder if a male jury is empanelled. Men simply refuse to convict the other sex of that crime." Only a woman, he declared, can really read a woman's heart and tell whether her emotional displays are true or false; only the women can determine rightly when a lie falls from a woman's lips or when she speaks the truth.

* * * * *

In a recent discussion at Nottingham City Council, it was argued that women are frequently placed at a grave disadvantage through having to give evidence to courts composed exclusively of men, and a Halifax magistrate also recently protested against the fact that man-made laws were administered wholly by men. On the other hand, most people with experience in the courts will readily admit that male juries invariably lean a little to the woman in the case, and, unconsciously, but none the less surely, make it harder for the man. Women would get much less sympathy from women jurors.

It seems, therefore, as though the women jurors would be welcome to many people, and doubts as to their capacity for impartial judgment need not be too seriously considered. Several coroners have in the past expressed themselves as favourable to the admission of women jurors, and years ago one of the Metropolitan police surgeons commended the idea, remarking that "the women have a lot of commonsense and their verdicts would compare favourably with those of the men."

* * * * *

Besides, think of the happy release it would mean to business men if they could be assured that instead of wasting days at an Assizes Court or other place where justice is dispensed, they could leave the duty to their wives! That thought itself should make many men keen supporters of the women's claim.

Daily Chronicle 2.6.19.

A NEW

CHANGES THE WAR HAS BROUGHT ABOUT IN THE SPIRIT OF THE PEOPLE.

After four and a half years as a war correspondent on the Western Front, and a recent tour in the United States, Mr. Philip Gibbs is making a study of English life as it has changed during his absence, owing to the influence of war on the mentality and social state of our people.

He will write in the "Daily Chronicle" from time to time on various aspects of this new England of ours, in town and country.

By Philip Gibbs.

I.—OLD LONDON AND NEW CONDITIONS.

Like many other men who have been in exile for something like five years, with seven days' leave, or a bad illness now and then, I have been exploring London again and rediscovering its types, with fresh eyes and a spirit that has changed because of things seen and remembered.

It is with a queer sense of emotion that one goes to old haunts, like a Rip Van Winkle back from another life, because those five years of war seemed so long—so long!—and now one walks the streets with memories of England before the war, when peace seemed secure in the ways we knew, and human nature to be jogging along in the old familiar tracks, not knowing that forces were driving it on to a world conflict, in which civilisation itself was threatened with downfall.

"The same old London!" said a friend, back, like myself, from the other side, and then, after a long silence, he added: "But with a different spirit in it. Somehow I feel that I don't know the people. They are a different crowd from those we used to know in the old days when you and I used to watch Royal processions, suffragette rows, and the latest sensation at the Law Courts. I suppose it's because one misses the faces of old pals."

THE SPIRIT OF LONDON.

He was right. There is a different spirit in London, because the life of the people has been altered in a thousand ways by the influence of war, and old London has adapted itself to new social conditions.

At Euston Station the other day I saw one little scene which would have been incredible in pre-war times, though familiar enough during the war. The interest to me was that it should be happening nearly six months after the last shot was fired in Armageddon. There was a wild turmoil of luggage on the platform, and the passengers were sorting out their own trunks and searching for them in the luggage - van. A Brigadier - General hoisted a heavy bag, and carried it down the platform. A Rear-Admiral winked at me because he had been lucky in capturing a trolley for his own bags. A young woman sitting behind the desk of the cloakroom was scornful with a foreigner who asked, "Are there no porters here to carry my baggage?"

The young woman patted her front hair and sniffed loudly.

"There's been a war," she said. "All our men have been killed. Haven't you read about it in the papers?"

OLD FRIENDS IN NEW GUISE.

She exaggerated a little in her bitterness. Not all our men have been killed. On the contrary it is comforting to see great numbers of young men walking about the streets of London, crowding into the trains and tramcars; young men in civil clothes, though I notice that they still wear their trench coats on cool days and brown socks under their serge suits. They are well-set-up fellows, and stride down the street in a soldierly way, and have a keener, more alert look than the boys who used to play dominoes in tea shops in the luncheon hours of the days before the war.

It was a well-being with a daily apprehension of tragedy at the bang of the postman's knock, which struck at the heart of many a woman waiting for her mate or her first-born. But it has changed the aspect of back streets in London, down which I used to wander with a heart stricken by so much human misery among those poor, grey, cheerless lives.

They are the fellows I met along the roads in France and Flanders before they were taken prisoner in the March offensive or before a Blighty wound saved their lives in the Flanders fighting. Many of them do not seem to have settled down to any job yet. They sit in the sunshine of Hyde Park listening to the music of a red-coated band. They make long lines with their girls in the queues outside the matinee theatres. They line up for boats on the Serpentine. They seem to have all their time on their hands in these days of armistice. Plenty of time for talking about the new conditions of their life, as I hear them when they sit, with straw hats tilted back, over marble-topped tea tables.

"Found anything to do yet?"

"No; I'm looking round. It isn't easy. What's your plan?"

"Not a ghost of an idea. What can I do? I'm a pretty good machine-gunner—do you remember that stunt outside Le Cateau?—and I'm not bad as a bayonet instructor. But I've no trade, and there's a glut of unskilled labour. I shall sit tight awhile, on twenty-nine bob a week. I did my bit all right. Now it's up to the country."

"The women have taken our jobs."

"Oh, well, I don't grudge it to them."

There are women on the tramcars, and women ticket collectors at the stations. This morning I saw two women bill-stickers, and very smart they looked in light linen skirts. I watched them putting up the posters in the Underground Railway, with nimble fingers, making a clean job of it, and remembered the old scarecrows, the dirty, beery, old fellows who used to have this job before the war.

WOMEN DOING MEN'S WORK.

I have watched the women window-cleaners polishing up the panes of London houses so that the sun shines through them. There was a group of land-girls at Victoria Station a few days ago, strutting about in linen smocks and breeches; strapping, rosy-cheeked, strong-limbed young women, indifferent to the glances of discharged soldiers, none too friendly, it seemed to me.

This arrival of women in the Labour world stares in the face of the man who has come back to London after years of exile. It was all right during the war. It was splendid, and helped to win the war, and the men in the trenches were proud of the spirit of the women, and gained strength through it. But now—after the war? Are they going to say: "Well, there you are, boys. There's the job. I'm going back to the little kitchen and the wash-tub—or me for a maid-servant in a semi-detached villa, with one evening a week, and no visitors?"

Women are not going back, I imagine. They have come out into the open, on equal terms with men, and with the same wage for the same work, or they will know the reason why. . . .

But the men are not all dead, in spite of the young woman in the cloak-room and the memory of a million dead boys in the homes of England, and in the sadness of England's heart. There are many idle brothers, with working sisters in this strange new London of ours, and I see a frightful problem coming when there is no 29s. for a soldier who has done his job, and wants another.

So far there is plenty of money about in London. The war—which corrupted the fields of Europe, and made a wide track of desert land through France and Flanders, and a graveyard where thousands of white crosses rise above the cratered earth as memorials of youth's great sacrifice—cleansed the London slums and brought prosperity and a new sense of well-being into little homes in mean streets.

The ragamuffin children are gone. They wear stockings now and lace-up boots. Their frocks hold together without rags and tatters. The frowsy, blousy women of Poverty Court are smartened up. They wear "summer blouses," and furs if the wind is shrewd. The young girls come out into the courtyard of an evening with silk stockings and bows on their shoes, and new skirts short enough to show the neatness of their ankles.

A great wind has blown through Poverty Court—the wind of war—and in spite of the groans of dying men borne on its breeze, and heard o' night by sleepless women, it has blown the old filth out of these courtyards and blown in paper money, good to spend—while it lasts.

NEW LIFE IN OLD PLACES.

There are flowers in windows which used to be stuffed up with rags; and gramophones in rooms which used to be almost bare of furniture, with pawnshop tickets in the cupboard drawer. In these districts there is a new life in old London, and there is hope in it for people who knew nothing but hopelessness. They will not go back to the old conditions without a desperate struggle, fierce as escaped animals thrust back to the cage.

As yet I do not see the drift of things. I see a kind of restlessness in the spirit of London as of people waiting for something else to happen after one act in a sensational drama. In all classes and in all places there is this sense of waiting and expectancy, a kind of hanging-about in the corridors of life before the Messenger comes with a new announcement.

So it seemed to me when I went into a club for officers in Pall Mall. It is a great rendezvous in halls where all day long there is a seething crowd of young men—mostly young, though with senior officers among them—who a few weeks or a few months ago were with the Army of Occupation, pulling every string to get demobilised.

Many of them are in civil clothes now and greet each other with laughter, because a fellow looks so different in a grey suit and straw hat, after years in khaki. But others still wear their "war-paint," with chevrons and wound stripes and ribbons and all, with regimental badges and Scottish tartans.

THE ONE GREAT PROBLEM.

There are one-armed men and one-legged men, and every afternoon an ambulance drives up with a crowd of cheerful cripples, rather weak on their pins as they cross the marble floor, badly mauled by the luck of war, still wearing the blue armlet of the Army hospital.

"Hullo, old buck!"

"Anything doing?"

There seems to be nothing doing, except the latest theatre, or a race-meeting, or a flying stunt, as far as the younger men are concerned. They are like the fellows of "other ranks," who sit talking across the marble-topped tables of tea-shops. The conversations are very similar.

"What the dickens can a fellow do? I can fly all right, but I don't want to, and it's no use, anyhow. To hell with flying, except as a Hawker game with the Press to boom you. I had enough of it when I crossed the lines every blessed morning, with the Archies going full blast and no crowds to cheer me. But now? I've no training for civil life, and I'm 23, and want to marry the best girl in the world, and I can't see how I can earn five quid a week, which is no good to me at all. I'm waiting for something to turn up, like old Micawber."

"Same here, and I'm fed up with it. Back to the Army again! I don't think."

There was music at the corner of a northern suburb on Sunday morning. It was a military band, played with a military beat. I strolled over to it, and saw a circle of bandsmen in plain clothes. By the look of them, more than by their badges, I knew them as discharged soldiers, the heroes of the war—young Tommy Atkins in mufti. The tune stopped, and one of them mounted a kitchen chair and addressed a crowd which had gathered round.

"The discharged soldier asks for justice—and work. Twenty-nine shillings a week is not good enough. We want work, and good wages after serving England. Some of us want a bit of the land we fought for. It is our right to have it. There are 500,000 members of the Discharged Soldiers' and Sailors' Federation, and we are out for the just reward of service in the war—for ourselves and for our crippled and helpless pals. It is up to England, and we are waiting to see what England is going to do."

In London I find that everybody is waiting, expectantly, anxiously, for the next phase of history which has already changed all their habits and all their thoughts.

Manchester Guardian

24/6/19

Women in Industry.

One the gravest domestic problems left for set ment by the war is that of the hundreds of thousands of women workers who have taken the places of the men who went to fight. Two distinct lines of argument are advanced to support the general dismissal of women workers from the tasks they have performed in the war years. The first urges that the men who fought must be given the places they left, whatever the effect on their substitutes. This is a just if not an ideal solution of an unusual and artificial industrial condition. But the argument is also sometimes put forward, both by employers and employed, that women should be excluded from an industry because they are women. The manager of the Manchester Tramways lately pronounced his women workers less efficient and less courteous than his men, and a similar line is taken in support of the provision in the Government's Restoration of Pre-war Practices Bill, which, in deference to trade union opinion, seeks to exclude women from the engineering trade. Of course promises to the unions must be kept, but any attempt at the indefinite exclusion of women is doomed ultimately to stultification and failure. The many faults women have shown in tackling men's work in these exceptional years that have given them their chance have been due in the main to the handicaps that their education, mainly controlled until now by men, has put upon them. The Women's Advisory Committee of the Ministry of Reconstruction recognise this fact when in their report, now published, they plead for a sounder training for that secretarial work which attracts so many girls. The traditions and atmosphere of forensic work are not acquired in a day, and for centuries we have educated woman for the home in the belief that that was her complete and sufficient destiny. The war has shown that we were wrong. As a nation we have admitted our error in extending the franchise, and ultimately we shall find it no more possible to shut the gates of industry than those of suffrage. The war antedated the education of many women to fill the rôles which they are capable of filling and destined to fill, but the attempt to rule them out of industries as a sex can only be wasteful and temporary. Let us see to the reinstatement of the men who left their civil work to take on a more vital task, and let us at the same time recognise that, with the exception of certain labour in which greater physical prowess must always dominate, the ability of women to take part in industry depends not on sex but on education, and make our plans accordingly.

NEW PROFESSIONS FOR WOMEN.

(FROM A CORRESPONDENT.)

The annual meeting of the National Council of Women, heretofore known as the National Union of Women Workers, always throws light on the future of girls' education, directly or by implication.

This year's gathering was held in the last week in June amongst the archæological antiquities and very modern commercial developments of Leicester, and was especially interesting as showing the trend of movements which have been somewhat in abeyance during war time. It was soon evident that, in the minds of the more advanced, at least, the concession of Parliamentary suffrage with its corollary of eligibility for a seat is not that goal of women's aims which some have supposed it. On the contrary, it proves a jumping-off point for the demand that no occupation which a woman may desire to enter shall be closed to her by a barrier of sex. The thorny question of admission to the priesthood was not taken up by the conference. But amongst the literature exhibited were copies of a newly-formed league which has this object definitely in view, and however small may be the numbers at present making the demand, it foreshadows a development of theological college training for women, and of qualifying examinations that will go further than the present one for the Archbishop's diploma.

The position of women in law administration, however, was very fully discussed. One of the most important aspects of this subject is of course that which regards the child. Apart from any desire of women to establish themselves in a great profession which may be said to range from police point duty to the Woolsack, there is a growing feeling among all who consider the delinquent boy and girl that they need something more of maternal influence both in penalty and in protection. One wave of opinion removed the child-criminal from the tainted atmosphere of an ordinary court. But the child-witness may still appear there, and an instance was quoted of a child of eight who was cross-examined for an hour and 20 minutes.

The woman probation officer has proved her value and is consulted by magistrates while cases are under remand. The woman juror would seem to be equally desirable, and would certainly relieve the strain sometimes put on busy men by calls to attend tedious cases. Logically, therefore, it would appear that the woman magistrate should also sit, and if it is urged that as yet women know little of common law, the answer is that some are ready to begin to learn at once, and that also, as things stand, it is frequently the knowledge possessed by the Justices' clerk which saves the situation. It is certain that much work entirely suited to women needs to be done with regard to separation orders, affiliation cases, and many kinds of assault. As for the policewoman, it may unreservedly be said that she has had a success far beyond anything that was hoped for by early supporters of the movement. The acknowledgment of her value by authorities has taken the classical form of entrusting the faithful servant with more work. To give one instance only: A year ago the Bristol training school supplied two women to the Gloucestershire force as an experiment to be tried for one year. After eight months, however, the County Committee were so well pleased that they appointed 14. In many places where the services of women patrols, without specified training and at first with very limited powers, were asked for the special needs of war-time, their position has now been regulated for permanency, and both training and position will no doubt before long be standardized. As things are, in some places a woman is sworn in, not in others, and regulations, pay, and prospects vary greatly. At a moment when many women are asking for socially-useful salaried work this should appeal. Owing partly to the generous gift of £1,000 by the Carnegie Trust, training at the Federated schools at Bristol and Liverpool, to which Glasgow is now added, costs only £3 3s. for three to six months' course, while immediate employment is practically certain.

WOMEN'S POST-WAR WORK.

GOVERNMENT COMMITTEE'S RECOMMENDATIONS.

SHORTER WEEK; MOTHERS' PENSIONS.

The Women's Employment Committee, presided over by Major J. W. Hills, M.P., which was appointed in August, 1916, to consider and advise, in the light of the experience gained during the war, upon the opportunities for the employment of women, has presented its report, and it was issued yesterday in the form of a Blue Book of 116 pages, which deals with practically all aspects of women's post-war work.

It recommends that free entrance to all clerical posts in the local government service should be given to women, and that all clerical posts open to men should be open to women. Sufficient training for industry and, in the case of unorganised workers, a large extension of Trade Boards are deemed necessary. The time has arrived, the Committee urges, for the consideration of a Bill dealing with fines, deductions, and the "living-in" system for shop assistants, drafted on the lines of the Minority Report.

New Shops Act.

The relaxation of the Factory Acts allowed during the war, the Committee believes, should cease when peace is restored, and excessive overtime, long spells, night work and Sunday work should be forbidden. The Government is asked to consider the possibility of a 44-hours working week and an annual fortnight's holiday on full pay. Trades should be allowed, within statutory limits, to settle their own hours, subject to Government sanction, "a substantial majority having power to bind the minority." A new Shops Act is required to limit the existing excessively long hours and spells. Government factories should make experiments to see whether a working day much shorter than the present is not economically possible.

Welfare work must continue after the war under a single Government authority. Industries should determine their own conditions under Government supervision. "It should be the employer's duty to study conditions as he now studies cost of production, and workers should strive for good conditions as they have striven for good wages." The workers should operate through Whitley Councils and Works Committees, on which organised women must be fully represented. Factory inspectors should be encouraged to call conferences of employers and employed. "Compulsory action by the State should be used for the purpose of making universal that which experiment has proved to be right." Women superintendents should be appointed where women are employed in substantial numbers.

Roll of Trade Unions.

With regard to Trade Unionism, the report states, organisation should be encouraged in every way. "Trade Unions should play an important part in preventing unemployment. Unions comprising both men and women are stronger for bargaining purposes than those consisting of women only, but there is work for both classes of Unions to do."

The employment of married women outside their homes is not to be encouraged. A system of mothers' pensions, on the lines of that in operation in the United States, is recommended. An immediate inquiry should be held into conditions in offices. Home work should not be encouraged in any trade unless it is clear that the maintenance of adequate wages is possible.

Training Scheme.

Considerable emphasis is placed on the desirability of adapting the training scheme of the Ministry of Munitions to peace purposes. Training must be closely associated to trade methods and requirements. Apprenticeship, learnership, technical classes, instructional, national, or local factory courses should be utilised. Maintenance for women during training must be provided, and the cost of training and maintenance should be a national charge. The Ministry of Labour, it is urged, should appoint a Committee at an early date to deal with this phase of the problem.

THE RIGHT TO WORK.

NOT SOLELY ON HARD JOBS.

The first resolution adopted at yesterday's sitting of the National Council of Women's Conference at Leicester was one to the effect that no restrictions on the employment of women should be included in the Restoration of Pre-War Practices Bill, and particularly that the right to work in new trades which had been organised during the war should not be taken from them.

Mrs. Oliver Strachey, who submitted the proposal, said that before the war women had all the nasty, hard, and unpleasant jobs thrust upon them at the worst possible pay, all the best and most highly-paid work being reserved and preserved for the men. Now that women's spheres had been expanded they must be very careful and determined or they would be driven back ruthlessly to the old and bad conditions.

Lady Lawson-Tancred, who seconded, said no woman worth her salt would for a moment wish to keep the brave soldiers who had fought for their country out of their old employment, but there was a wide difference between that and going to the other extreme of displacing women especially in new industries. (Applause.)

After a most animated discussion, the Conference approved the Bill for the State Registration of Nurses. It was also resolved to ask the Government to empower the Ministry of Health to take steps to ensure an uncontaminated milk supply.

Times Educational Supplement continued

703

703/36

The position of women in engineering was also shown to be important. When we remember that as the result of the Government agreement of March, 1915, with the trade unions no fewer than 792,000 women entered trades previously closed, it is evident that much experience and result of education, as well as scrapping of new machinery, will be wasted if all are turned out. It is also an open secret that an Act to bring about the return to pre-war conditions has been sought with intention to use in agreement rather than for complete execution. Some of the crafts also are new to this country.

The most "advanced" suggestion laid before the conference was that of Dr. Christine Murrell, who brought forward the complete endowment of motherhood, pleading this as the true solution of the equal pay for equal work problem. Grant that no man will have a family to support, because the State will free him from all obligation and claim his children as its own, and certainly the whole argument for men's wages on a higher scale vanishes. A conference composed of practical workers listened with more interest to the case for those pensions for widows and deserted wives left with children which a majority of the American States have now adopted. While an income for a child *quâ* child may undermine the foundations of family life, this measure abolishes the need for Poor Law schools, except for total orphans, and seeks not only to preserve the family life but to improve and raise it by wise inspection and guidance. And this, again, points the way to more and better domestic teaching, both for visitor and visited.

LEAGUE OF NATIONS UNION.

THE QUESTION OF CONSCRIPTION.

A meeting of the General Committee of the League of Nations Union was held yesterday in London, to consider the report of the special committee on the reorganisation of the Union. Lord Robert Cecil, M.P., was elected chairman of the Council, on the motion of Professor Gilbert Murray, who remarked that their President, Lord Grey of Fallodon, owing to the lamentable loss of his eyesight, was unable to take a part in their counsels.

Lord Robert Cecil said the cause in which they were engaged was a worthy one, and the work of a society like that was of great importance. It had often been stated that the whole success of the League of Nations depended entirely upon the spirit of the nations forming it. If we failed in this country there was very little hope that the League would succeed in other countries.

In the discussion on the report of the special committee, objection was taken to the proposed admission to the League of "all peoples able and willing to give effective guarantees of their loyal intention to observe its covenants." The clause was amended to read "Admission to the League of all peoples able and willing to observe its covenants."

Another clause related to the advocacy of a "progressive limitation of armaments in all countries." To this Miss Mary MacArthur desired the addition of the words "and the abolition of conscription." Professor Murray said every nation in the League had to be ready to undertake military operations if necessary, and he could conceive a state of things where some form of conscription might be necessary. It was finally decided to add the words "and the abolition of the system of conscription."

Some 80 branches of the Union were approved, including those of Leeds, Bradford, Halifax, Harrogate, Hull, Scarborough, Todmorden, Liverpool, Manchester, Derby, Nottingham, Glasgow, and Edinburgh.

The report, as amended, was adopted.

Manchester Dispatch

EMANCIPATED WOMAN.

THE House of Lords has gallantly passed the Second Reading of a Bill to remove sex disqualifications which is pretty much on the lines of the Bill on which the Government were defeated in the House of Commons last week.

Their lordships, that is to say, the few of them assembled, have agreed that women may hold civil and judicial offices, professions, and vocations, and so on, and serve on juries, but their lordships were not so hearty about peeresses in their own right sitting in their House. This Bill says peeresses may do so by permission of the King.

An anomaly was pointed out that the existing peeresses in their own right would be debarred, and it was suggested this interesting question should be left over until the Government "next session" introduced their Bill to reform the House of Lords. But there is no pledge there will be such a Bill next session.

Wits, of course, are saying that to have old women on the Bench will not be a drastic change, but with the arrival of the woman doctor the woman lawyer was inevitable, and there never was any reason why women should not adopt those and other professions, though there may be some domestic friction if a man consults his lady solicitor too frequently!

As for jurywomen, they are long overdue, though we believe there will be found to be many unfortunate women in the dock who would prefer the tender mercy of the male to the stern condemnation of the immaculate jurywoman.

WHERE WOMEN OF 40 ARE WANTED.

ROOM FOR HUNDREDS IN THE HOSIERY INDUSTRY AT LEICESTER.

BEST WORK AT MIDDLE AGE.

No woman, whether she is young and fair or in the mature stage of forty, need want work at Leicester. There is a big demand for such women in the hosiery trade.

Their work is greatly appreciated in Northampton, among other provincial centres of industry.

Miss M. A. Storey, manageress of the Women's Department of Leicester Labour Exchange, says: "Our difficulty is to find sufficient women to fill the positions. We have in this populous city less than fifty women on our register, and they are largely unemployable and quite unfitted for industrial work. Women of all ages, including those over forty, can find employment at once at very good wages and under excellent conditions.

"We could find work for hundreds more if we only had the housing accommodation. I have a committee now sitting to devise a means of extending the hostel accommodation. Women of fifty as well as young folk are trained quickly for the hosiery industry, in which there is every scope for artistic and manual work. Over 80 per cent. of the operatives engaged are women and it is work which specially appeals to women. In fact, women who wish to succeed have never had better opportunities."

These statements were confirmed by Mr Tanner, the manager of the Exchange.

VALUE OF EXPERIENCE.

NORTHAMPTON TESTIMONY TO WORK OF WOMEN OF FORTY.

Rev. C. W. Crump, in charge of the financial department of the South Midland and Cambridge division for the Y.M.C.A. and general organising secretary for Northampton and district, said to a "Daily Chronicle" correspondent:—

"At one period during the war I had 600 women workers under me, of whom nearly two-thirds were forty or thereabouts, and they did splendid service. I should think it would be almost impossible to carry on any big social undertaking without women of that age and experience.

"I cannot understand anyone suggesting that women are too old at forty, because I should think that is about the age at which they are capable of doing their best work."

Mr. Sidney Adnitt, of Messrs. Adnitt Brothers, the largest drapers in Northampton, who employ a very large number of women, said:—

"Our experience is that it is all nonsense to say that women are too old for business at forty, for in many cases we find women, both of that age and older, very capable business women. We have got some employees of that age, and I for one should be very sorry to lose them.

"The whole question is one of brains. If you have anyone who is capable, when they reach the age of forty they are usually better still, because they are using their accumulated experience, and from that point of view are additionally valuable to any business."

NOT ACUTE AT CARDIFF.

WOMEN CLERKS OVER FORTY ARE PRACTICALLY UNHEARD OF.

The problem is not in an acute stage in the Cardiff district.

Commander Evan Owen, whose business interests at Cardiff and in the South Wales coalfield entitle him to speak with authority, told the "Daily Chronicle" correspondent that in Cardiff the woman clerk as a considerable factor in the business life of the city was a comparatively recent innovation.

Mr. Owen, who is secretary of the South Wales and Monmouthshire Clerks' Association, added that it was quite true that among the women clerks of Cardiff he knew none over 40, and he was unaware of any seeking office positions at that age.

In further inquiries our correspondent found this view generally supported, but there was no evidence to show that women of 40, with business training and experience, would be regarded with disfavour for vacant positions.

AGE NO BAR AT HULL.

WOMEN NOT LIKELY TO GET MARRIED PREFERRED.

The too old at 40 attitude towards women does not apply at Hull, so far as clerical work is concerned, telegraphs the "Daily Chronicle" correspondent. The number of middle-aged ladies thus employed is only small, because, in most offices, the lady clerk is a war-time innovation.

Mr. Kirk, of the firm of Messrs. J. Watt and Company, ship brokers, thinks that a woman of 40 would be preferable to a younger one, because of her experience and because she would be more reliable and less likely to fritter away her time. This, too, was the view expressed by Mr. A. J. Goodison, a stockbroker.

Speaking for the corporation, Councillor Wokes said that 40 years would not make a bar to the employment of women. "The Sanitary Committee," he said, "have engaged ladies of that age for important work in the people's homes, and at the last meeting of the Education Committee we appointed at least one lady of those years to one of our principal schools. I will admit that if there were two candidates, one 30 and the other 45, but in all other respects equal, the younger one would be most likely to get the appointment. But the latter would by no means be ruled out.

"Marriage is the chief cause of lady teachers retiring, and when we appoint one of 35 or so, we know she is not going to leave us in five minutes to get married."

Reliability of Age.

Alderman Rose, of Barnsley, told a "Daily Chronicle" representative that there was plenty of scope to-day for educated women. He expressed the opinion that women of 40 and over were more reliable than younger women.

He agreed that a woman with a knowledge of tailoring, cooking, and domestic service found a suitable situation quicker than the educated woman, there being a bigger demand for the former.

WOMEN AND THE LEAGUE OF NATIONS.

The attitude of women towards the League of Nations was considered yesterday at a conference of women's organisations in London. Mrs. Rackham, who presided, said the object of the conference was to try to transform into effective action the words of the League of Nations covenant, which had said that all positions under the League which applied to men should equally be open to women.

Miss Macarthur (Industrial Women's Organisation) moved a resolution, which was agreed to, urging the need of the representation of women on the governing bodies of the League.

A resolution appealing to the Government and the League of Nations to support the appointment of women to serve women in the various capacities connected with the League was also passed. Mrs. Allen Bright, seconding, said all Governments were susceptible to pressure, the present Government notably so, and she advocated such pressure being applied.

Another resolution adopted provided that in making appointments in connection with the League, the Governments of various countries should consult the most representative of organised women. Miss Macarthur pointed out that the most suitable women for the job were not always those in the limelight.

The Countess of Selborne pointed out that the conference did not, by any means, represent the whole of the female opinion of the country. There were wives and mothers who did not join any society, who should have a voice in the questions before the conference. "We are regarded as cranks," said her ladyship, "and I am proud of being a crank myself, but there are the great mass of the nation who are not cranks and whose sound common-sense is one of the great pillars of society. It is the common-sense of these women that I want to get on to any representative body such as this might be."

Various schemes for the nomination and recommendation of women representatives were discussed, and a resolution, proposed by Miss M. Macarthur, was ultimately carried that measures be taken, by a provisional committee, to receive and consider and, if necessary, to recommend nominations of women to be submitted to the British Government and the League Secretariat as suitable for appointment on the various bodies, or in the capacities for which the Government or the Secretariat are responsible. The recommendations will be submitted to a further meeting of the conference. A resolution was carried for the establishment of a permanent International Women's Office, similar to that of the International Labour Conference and the International Labour Office already set up.

Morning Post 4.9.19.

DANGER OF CRANKS.

Women's Representation on the League of Nations.

Receptions of various women's organisations in the country met in conference in London, yesterday, to consider their representation on the League of Nations and the best methods of securing such representation.

Resolutions urging upon the Government the just demand for representation of women in the Assembly of Delegates in the International Court of Justice and in all commissions and other bodies set up in connection with the League were submitted and passed.

Speaking in support, Miss Mary MacArthur, of the Standing Joint Committee of Women's Organisations, strongly contended that no one should be appointed to any office simply because she was a woman, but on the other hand she should not be excluded for the same reason.

Miss Allen argued that women should be more fully represented upon the delegation to the forthcoming American Labour Congress at Washington.

The Countess of Selborne, of the National Council of Women, was alone in her opposition to a resolution to the effect that in making appointments to all bodies connected with the League of Nations the Governments of the various countries should consult the most representative bodies of organised women of each nation. She maintained that the whole of the womanhood of the country should be consulted, and not only those connected with organisations, for if the latter only were consulted they would be in danger of being represented by cranks. She would like to see the representation of the normal women of the country, the wives and mothers, of whom there were many who would be more fit to represent them than many organised women.

The resolution was carried.

Daily Chronicle 10.9.19

703/38

PLIGHT OF THE WOMEN OF FORTY.

THOUSANDS UNABLE TO GET EMPLOYMENT, ALTHOUGH WELL EDUCATED.

MIGHT REPLACE FLAPPERS IN WHITEHALL OFFICES

Are thousands of middle-aged women of education doomed to unemployment and want in the post-war industrial order, as suggested by "A Woman of Forty," whose despairing appeal was published in the "Daily Chronicle" yesterday?

Inquiries made by a "Daily Chronicle" representative show that the fears expressed are only too well founded, except where women have retained their adaptability and elasticity of mind.

The older women employed in Government offices during the war are in precarious plight, and it is suggested that a number of them should be absorbed into the permanent staff, in the same way as discharged Service men, in preference to the flapper and the woman of independent means.

MORE ADAPTABILITY.

WOMEN WITH TRAINING NOT IN A HOPELESS POSITION.

The plaint of "A Woman of Forty" that the middle-aged, well-educated woman cannot get employment is tragically true in thousands of cases, writes a "Daily Chronicle" representative.

The position, however, is not hopeless. There are two organisations which exist for the purpose of assisting educated women to obtain posts, and the officials of both take an optimistic view of the future. These bodies are:—

The Professional Women's Registry (Ministry of Labour), 16, Curzon-street.

The Central Bureau for the Employment of Women, 5, Prince's-street.

Both lay emphasis upon two points:

Adaptability;
Mobility.

The woman who has lost her elasticity of mind, or who is not prepared to accept a position away from her home town, stands little chance of securing a situation which will enable her to support herself.

PROSPECT NOT HOPELESS.

Miss M. G. Spencer, secretary of the Central Bureau, has had 20 years' experience in dealing with applications for employment, and she has rendered useful service in advising Government Departments on questions of women labour. Her views, therefore, are worthy of attention.

"If 'A Woman of Forty' will write to me and arrange an interview, I will see what can be done to obtain employment for her," she said to a "Daily Chronicle" representative. "The prospect for middle-aged women is not at all hopeless, if they are adaptable. It all depends upon their personality.

"I found a position for a woman of 60 only a few days ago. We deal with 35,000 written applications and 10,000 callers in a year. The woman who wants £5 a week for supervising a few girls or who declines to go more than three miles out of London is hopeless.

"If, however, she has not lost her elasticity, it is quite possible for her to obtain a post where she will be able to support herself. We invite educated women to get into touch with the bureau; but we do ask that they should write and arrange an interview. We have only small premises for the work, and applicants become disheartened if they have to wait a long time.

"With regard to trained women, the demand is brisk, and is likely to remain so, although salaries are going down."

SCOPE IN SUPERVISION.

A woman official at the Ministry of Labour, who is in close touch with the question of employment, held similar optimistic views. She suggested that the untrained educated woman could adapt herself to:—

Welfare supervision in peace-time industry.

Supervision of domestic day servants in hostels.

Health visiting.

Assistance in households where only day girls are kept.

Working partnerships with professional women.

House property management on the Octavia Hill plan.

"There will be a big demand for women supervisors in peace-time industry," she said. "A number of factories are already writing to the Ministry asking us to recommend supervisors from the panel which we started, and which is being continued. The big shops always have supervisors, and they will be absolutely necessary in Government offices where a large number of women clerks are employed.

"Those who have had, or can obtain, first-aid training will find this an additional asset in the work of supervision.

DOMESTIC POSTS.

"My own view with regard to domestic service is that a new system will arise, in which day-girls will be grouped into hostels near the houses where they work. Here is another opportunity for the well-educated woman—to 'mother' them and look after them.

"Educated labour must be mobile; London women are usually reluctant to taking positions in the provinces. I think, as we settle down, there will be many openings for middle-aged women on the domestic side. There is the opportunity for women of taste to assist in the decorative side of house furnishing and to make themselves so useful in the modern household, where the servant problem is acute, that, while retaining their independence, they would be able to secure a comfortable home.

"Then there are infant welfare creches and nursery schools which offer openings for the capable, adaptable woman, and the training required for health visiting is quite short.

"And there must be many professional women who either cannot afford or are unable to get a servant at the present time who would willingly offer a home in exchange for light household duties. These would only occupy a portion of the day, leaving the remainder for needle-work, or any other occupation, which would produce a small income."

NEED OF TRAINING.

Miss Evans, the secretary of the Association of Women Clerks and Secretaries, pointed out that while there is not now the same antipathy on the part of employers towards employing women as there was several years ago, unless a woman has had some sort of training for a profession she is not likely to find employment when she is getting on in years.

"This difficulty is being experienced by a large number of really well-educated women who never had to work for their living until the war came," she said. "Then they found their incomes reduced very considerably, and they were obliged to seek employment—many in Government offices. They had had no training, and they are too old usually to begin a business life now that they are not wanted.

"I have known women of 40 who were determined to make something of their life, and they have succeeded. But at that age women must make up their minds that they have got to receive training.

TO REPLACE FLAPPERS.

"There is very little demand for the older women in the commercial world, unless they have had previous secretarial training. If they have been doing clerical work for many years they have a good chance of employment, but an employer, if he has to engage an untrained woman, prefers the girl of 18 to the woman of 40.

"A trained woman ought to have a good chance of getting employment, for there are plenty of openings. The demand, in fact, is greater than we can meet.

"We recommend that a certain number of these middle-aged women should be absorbed by the Government departments, in the same way as discharged Service men are. There is a considerable amount of very ordinary routine work that will have to be done in the new Civil Service, and we think it would be better for the Government departments to utilise some of the older women who can do this work rather than the young girls of 15 to 17 years of age or the women of independent means."

Times 4.11.'19.

CAREERS FOR WOMEN.

WIDER OPPORTUNITIES NOW OPEN.

A new edition of *Careers*, with the sub-title "After the War," has been issued by the Students' Careers Associations, 5, Princes-street, Cavendish-square. It contains a foreword by Lady Bryce, and covers the increasingly wide field of opportunities now open, or, as in the case of the legal profession, about to be opened to women.

It is hardly a book for women seeking some immediate work, for which a short "smattering" of knowledge would suffice; it is written for the woman who is prepared to undergo training. The teaching profession in all its grades, from elementary school teaching to lecturing and coaching, is dealt with, and the salaries, most of which are higher than in pre-war days, are quoted. Details of the medical, dental, nursing, and allied professions are given; other careers include social work and library work, with information concerning the new school of librarianship; literary work, secretarial work, accountancy, work in banks, insurance, advertising work, dress-making, hairdressing, house agency, house decoration, millinery, tailoring, and tea-room management (the profits from which are said to be three times greater than before the war though the initial cost is also greater); horticulture, agriculture in all its branches; arts and crafts, from black and white work to the stage; public work, including all branches of the Civil Service, and appointments under local authorities; architecture, engineering, the teaching of riding, and work overseas are all among the subjects covered.

In articles dealing with wholesale business, it is stated that girls have largely drifted into such positions as shorthand-typists, and that where the youngest male clerk may rise to the post of departmental manager or managing director, the girl usually remains only a shorthand-typist. This is at present open to question, for there are to-day many women holding important positions with wholesale firms in London, particularly in the drapery and millinery trade, some as owners of their business, some as managers of special departments. It is, however, very truly pointed out that a strong obstacle to their advancement in the world of commerce lies in the fact that the exchanges are closed to them, and that as long as this is so, their place in the world of commerce must be an inferior one.

Dancing is perhaps not the profession many ambitious fathers would choose for their daughters, but Mrs. Wordsworth, who has trained some of the most successful teachers and solo dancers, says:—"There are hundreds of young girls on the verge of choosing a career who would become splendid dancing mistresses with proper training. The ideal age for training is between 16 and 18." The salaries earned, as quoted by Mrs. Wordsworth, appear to compare very favourably with those offered in duller professions.

A warning is given that since demobilization began there has been an over-supply of drivers, both men and women; the demand for women motor-drivers has almost completely ceased.

Miss Mildred Ransom, in describing how to run a shorthand, typewriting, and translating office, has a sensible word to say against working overtime. "Working in shifts is reasonable," she writes, "but allowing the work to dribble on until after 10 or 11 at night is objectionable in every way. It is a matter very greatly to be regretted that overtime has been so encouraged in Government offices."

The book is compiled by educated women, each of whom has found a successful career in the vocation of which she writes. An interesting point is made in the preface by Miss M. G. Spencer, secretary of the Central Bureau for the Employment of Women, when she says, "Work with children was extraordinarily unpopular during the war, the chief reason being that it implied residence. But there are signs that with demobilization many girls will return to what is both a fairly paid and interesting profession."

Daily Chronicle 11.12.'19

WOMAN INSURANCE MANAGER.

BIG COMPANY'S PIONEER APPOINTMENT.

MOTHERHOOD POLICY.

The "new" women, the post-war women with their independence and self-reliance, have already made their mark on the world in many ways. Insurance methods and plans have now been adapted to meet their especial needs.

A "Daily Chronicle" representative yesterday had a chat with Mrs. M. R. Verden, who has recently been appointed manager of the women's section of the Eagle Star and British Dominions Insurance Company. This is pioneer work, for, up to the present, insurance companies have not concerned themselves specially with women.

"As a matter of fact," said an authority on insurance, when questioned on this point, "insurance companies have never regarded women's lives or business concerned with them as being as good as those of men."

WOMEN'S BIG SACRIFICE.

But this opinion has been changing since the coming of the Armistice released thousands upon thousands of women, whose wits and abilities have been sharpened by war work for business and commercial ventures.

"I have always been wrapped up in work for women," Mrs. Verden said yesterday. "And I have always realised that the modern, independent woman who marries is making a big sacrifice. The woman worker most often gives up her income, and, consequently, her economic independence, when she marries.

"When children come, there are the inevitable expenses. Cots, perambulators, and so on, have to be purchased, and there are the hundred and one expenses to be met which are such a heavy drag on an ordinary middle-class income.

WAR WIDOWS.

"In addition, there are thousands of war widows who have to educate their children and bring them up to be worthy citizens. They cannot do this on their pensions. Consequently, they must work. And while they are working they must think of the future.

"I have discussed all these aspects exhaustively with a company of well-known women, who have agreed to act as an honorary board of reference for the women's section of the insurance company. They include Lady Frances Balfour, Viscountess Hampden, Miss Lilian Barker, C.B.E., Miss Damer-Dawson, O.B.E., Miss Ruth Young (chairman of the Association of Women Clerks and Secretaries), Mme. Clara Butt, and Miss Lilian Braithwaite. As a consequence there has been drawn up a scheme of insurance policies which, I think, meets the needs of the modern woman.

A MOTHERHOOD POLICY.

"I am especially proud of the Motherhood Policy, a three-fold scheme which enables a woman to do three things, by means of yearly contributions, which may be broken up into detailed payments to suit individual incomes. These three benefits are:—

1. **An annuity or lump sum at the age of 55.**
2. **Payments of £10 at the birth of each of five children.**
3. **£100 if death occurs within a month of the birth of a child.**

"Many fathers and mothers are helping their young daughters to take these policies out," said Mrs. Verden. "It may be that, when they get married, their husbands will pay a proportion of the insurance for them.

"Anyhow, whichever way it may be arranged, I am glad that we have been able to fix up a scheme which should, I think, be of real use to the woman of to-day in helping her to make independent provision for herself, even should she give up her career."

Daily Chronicle 18.12.'19 703

LADY CHARTERED ACCOUNTANT.

IN PRACTICE FOR OVER THIRTY YEARS.

NEW 'OPEN' CALLING.

Latest of doors to open to women's imperious knocking is that which leads to the profession of accountant, writes a "Daily Chronicle" special representative.

One or two women have been practising for many years as accountants, some with the certificate of the London Association of Accountants, which admitted women to its ranks about ten years ago, when Mrs. Ayres Purdie was made the first woman member.

Until recently, however, neither the Institute of Chartered Accountants nor the Incorporated Society of Accountants and Auditors admitted women.

HONORARY MEMBER.

Now the latter society has capitulated, and women who are interested in figures and money as the means to providing an interesting career are wondering how long the oldest professional society of the three will hold out.

A woman who wishes to be admitted to the Incorporated Society can enter in two ways. She can prove that she has been practising for ten years, or she can be articled for five years, or three years if she has a degree, to a firm of accountants. The first woman whose name will be entered on the register of the institute will, however, not be asked to enter by either of these two ways.

Miss Harris-Smith.

Miss Harris-Smith, who has been practising for over 30 years, is to be made an honorary member.

HOW TO GO ABOUT IT.

Mrs. Ayres Purdie, probably the most famous woman accountant in the world, explained to a "Daily Chronicle" representative yesterday that the fact of a woman enjoying membership of a professional association enables her to give certificates when these are required at the end of an investigation.

"A girl who intends to take up this work," said Mrs. Ayres Purdie, "should have a good education of the matriculation standard.

"The most practical course for her to take, now that membership of two of the professional societies is open to her, is for her to get herself articled to a firm of accountants.

"She must pass an intermediate examination in mercantile law, auditing, general commercial knowledge, partnership and executorship accounts, book-keeping, and accounts generally. For her final she must study company and bankruptcy law."

Mrs. Ayres Purdie, it may be mentioned, did good work as auditor to some of the biggest of the women's charitable funds during the war.

703/39

WOMAN'S HOSPITAL IN WAR

By Flora Murray, C.B.E., M.D., D.P.H. Common Cause Jan 23 - 1920

The Military Hospital, Endell Street, was opened early in 1915, in the old workhouse of St. Giles, Bloomsbury. At request of the Director-General, Army Medical Service, the management and work were undertaken by the Women's Hospital Corps, which had been working in France since the previous September. On March 22nd the buildings were handed over to the organisers (Dr. Louisa Garrett Anderson and Dr. Flora Murray) by the colonel who was then in charge of the work of reconstruction. This gentleman was seriously disturbed by the innovation of giving women a command, and strove to make them realise the impossibility and the indelicacy of the proposal. Finally, having accepted receipts for the keys and the coals, he wrung his hands and exclaiming, "Oh, good God, what difficulties you will have!" he left them in possession.

The work of conversion of the old buildings had been in hand for some weeks. Lifts were being placed in each block, sanitation and lighting renewed, operating theatres and laboratories constructed, and painting and cleaning carried out. Some four hundred workmen were on the premises. There was an indescribable chaos, and a great mass of lumber and useless furniture impeded progress.

Out of it all order gradually was evolved. The workmen really worked; fatigue parties of Guardsmen were obtained to clear up the mess; indents went in for equipment, stores, instruments, and all the thousand things a hospital needs, and, though the delivery was slow and uncertain, the supplies brought home from France by the Corps made it possible to be ready in the first days of May.

The medical staff, which numbered fifteen women, included many well-known specialists. It comprised Dr. Louisa Garrett Anderson (chief surgeon), Dr. Winifred Buckley (surgeon), Dr. Amy Sheppard (ophthalmic surgeon), Dr. Louisa Woodcock (physician), Dr. Helen Chambers (pathologist), Dr. E. M. Magill (radiologist), and Dr. Handley Read (dental surgeon). The death of Dr. Woodcock in 1917 deprived the hospital of one of its most valued members. She was succeeded by Dr. Margaret Thackrah. The work of administration fell to Dr. Flora Murray as Doctor-in-Charge, assisted by Miss Olga M. Campbell, the Quartermaster. The doctors were graded as officers and drew the pay and allowances of the various ranks, as well as the bonus and rates which were subsequently granted to officers.

Miss Hale, the matron of the Elizabeth Garrett Anderson Hospital, and a member of the Territorial Forces Nursing Service, was seconded, by request, for service under the War Office and accepted the post of matron. She had thirty-six trained nurses under her. The rest of the nursing and the work in the stores and offices was undertaken by women orderlies. The orderlies were, perhaps, the most distinctive feature of the hospital. They were young, with all the beauty and charm of youth. They brought courage and inspiration to their work. Girls who had never worked before took up the daily grind in the wards or stores, and brought to it such gaiety and buoyancy of spirit that patients and staff were alike uplifted and sustained. They wore their graceful uniform of drab with blue facings with pride and dignity. They worked splendidly. They laughed and the men laughed with them. They were the spirit and the life of the hospital. They were ready to get up tea-parties, to dress-up the men, to act for them, sing to them, to disguise themselves in cats' skins and horses' skins, and play antics, till every sick man in the ward forgot himself and laughed till he cried. And with it all they were tender and careful. They had sympathy and knew how to comfort, and whatever demands were made upon them they never failed.

The hospital contained five hundred and seventy beds in seventeen wards, which were named after women saints—St. Anne, St. Barbara, and so on. They were fine, large wards, well lighted and airy, and gay with coloured blankets and flowers. There was a recreation room also, with a small, but well-equipped stage, on which wonderful plays and pantomimes were frequently produced, by the kindness of many of our best known artistes. Miss Bessie Hatton, the organiser of amusements, provided at least two entertainments a week, and eventually the hospital could boast of its own orchestra and its own troupe of "Follies." The "shows," as the men called them, were very popular. The room used to be crowded with beds, and wheel-chairs, and men in blue, forming an enthusiastic audience. On one occasion, when Her Majesty, Queen Alexandra, was coming to see a play, a very sick man asked to be taken down in his bed. The surgeon demurred, thinking it was too much for him, but he said, "Doctor, you wouldn't be hard on me. The only one of the Royal Family I've seen is Sir Edward Carson and I would like to see the Queen"; so he went, and, when Her Majesty was told about him, she went to his bed and spoke to him specially, making him very happy.

The Library was a very important department, and under the fostering care of Miss Beatrice Harraden, it made itself felt in every ward. Day by day, with note-book in hand, Miss Harraden went round taking orders. She taught many men to read, leading them on through the paths of literature from "Tit Bits" to Shakespeare. For some patients there would be subscriptions at Mudie's, with books changed daily; for others, fiction, history, or technical books were provided. Whether Dante or "Don Quixote" in the original, or mathematics, or a treatise on old china was asked for, it was always procured. The means for providing these books and entertainments and many other small comforts came through the liberality of friends outside, who, for four-and-a-half years, generously supported the fund for extra comforts. One man, addicted to the perusal of stories published at twopence, was persuaded by the Librarian to read a book of H. Seton Merriman's in the sevenpenny edition. Next time she went round, he said, "Librarian, I think this sevenpenny author is an improvement on the twopenny one. Now I might try something else? Have you got a shilling author for me?" Of course, she found one. A great deal of poetry was read. Shakespeare was popular and technical books of every kind were in great demand. The book-cases were not locked and, though a few books would disappear, that only meant that the patients and the staff were reading.

The War Office method of opening a new hospital is to transfer cases to it from other hospitals, and, on the opening day, a hundred such cases were received. The method has its disadvantages, because hospitals are wont to transfer cases which are undesirable for some reason, and this does not make things easier for the opening hospital. In the case of Endell Street, the convoys of wounded poured in during the first week, and the staff worked night and day to receive them and to get the hospital into working order. It was situated near the stations and, at all times, received a high proportion of stretcher cases and heavily wounded men.

The R.A.M.C. staff attached to the hospital numbered eight non-commissioned officers and men and it was necessary to train the orderlies for stretcher work. They did it very well and enjoyed it. If the convoy bell rang in the day time, the girls would run out of the offices and stores and line up ready to help, and, at times of pressure, a squad from the nursing section would voluntarily stand by till 10 p.m. to help if need be. Convoys most frequently came between midnight and 3 a.m., and the staff was often up every night for a week taking in.

In the dawn of an August morning in 1915, a large convoy of Australians from Gallipoli arrived. The men were dreadfully wasted and ill and the few who were on their feet were like grey ghosts in the dim morning light, as they wandered off to inspect the occupants of the beds under the glass screen in the square. Some thousands of Australian and New Zealand men passed through the hospital. They were pleasant patients and very responsive. They had, too, a welcome point of view where women were concerned. One would say that it was "a queer

country this, that lets its women do work like this and won't give them the vote," and the whole group would agree. But response to gentle influences marked all the men. They always thought that their ward was the best in the hospital, and their doctor the best on the staff, and that no one else could possibly have saved the leg or arm under discussion: and, indeed, the ward medical officers did such gallant and devoted work, that no man could ever feel that he had been passed over. The men would point out to visitors, generally quite wrongly, that the worst case in the hospital was in their ward, with conscious pride, and, at the tea-parties to which they were invited, they would boast about their hospital and their doctors and their nurses, while the hostesses sat amazed and edified. The sight of the dental surgeon crossing the square never failed to thrill them, for her power to extract teeth was considered marvellous. The photograph which had the best sale in the canteen was a scene in the operating theatre. Their faith in Dr. Garrett Anderson was unbounded. She used to go round the severe cases quietly, between five and seven in the evening. She would sit by a man talking to him about his case, comforting him, and explaining gently and clearly what she felt should be done for him, seeking his confidence, but never hurrying his decision, until at last it would come: "I leave it to you, Doctor. If you think it's best, I'll have it done."

A kind friend introduced the electrophone into the serious case wards and the men took immense pleasure in listening to the Halls. Perhaps the "Bing Boys" was the favourite turn. It helped to cure many of them. They would lie with rapt smiles, gazing at the ceiling, chuckling gently, till they fell asleep, with the receivers still on their heads. New cases could hardly believe it and waited eagerly for the evening to come. One, who had just come in and who was having an operation done that afternoon, made the others promise to rouse him in time for the "Bing Boys." His operation was a severe one, but they kept their promise, and he was found thoroughly happy, with the receivers on his ears and a smile on his face, in the evening.

Christmas was a great festival. It seemed to last a month, for decorations and rehearsals and preparations began early and entertainments went on after the New Year. The staff formed a carol choir and sang at night in the square, and on Christmas Eve in procession round the wards. In 1917 they were singing in the square of peace and goodwill when the air raid warning came through and the anti-aircraft guns began to fire; they had to put out the lanterns and finish in the dark with "Abide With Me." The ward decorations were most wonderful, and there would be a succession of teas, entertainments, dinners, and pantomimes, which everyone enjoyed thoroughly. As one patient said: "I never knew you could have such pleasure and enjoy yourself like that without getting drunk."

Now and then there would be a staff supper and dance, when everyone joined in the revel. The C.O.'s would personate Colonel Dugout and his lady; the matron, Mrs. Gamp; the Sergeant-Major, a lady doctor, and the fun would be tremendous.

In the four and a-half years that the hospital was open twenty-six thousand patients, of which two thousand were women, passed through the wards, and seven thousand operations were performed. The hospital was closed on October 31st, 1919.

The staff had lived and worked together in great happiness and harmony. Their hospital had grown very dear to them, and they could not bear that its memory should be lost. They have decided to raise a Commemoration Fund, with which to endow beds in the Roll of Honour Hospital for Children, 688, Harrow Road, in memory of the Military Hospital, Endell Street. The appeal for this endowment has gone out to former patients all over the world, and the first £1,000 has been nearly subscribed already. The collecting cards come back with a few shillings collected in threepences and sixpences, and with touching illiterate notes, which show that Endell Street is not forgotten:—

". . . . I was cared for kindly at that hospital and I was sorry to leave it. I was wounded twice after being at that hospital, but I wasn't cared for anywhere else as kindly as I was at Endell Street."

Messages and donations are coming too from mothers and wives whose men have been killed since they left the hospital but who were "set on Endell Street," and these little tokens are justly treasured in memory of a great opportunity given to women.

WOMAN'S ECONOMIC STATUS AND OUTLOOK.

III—IN INDUSTRY AND BUSINESS. WOMEN'S GUILDS.

By Mary Ward.

In a previous article* it was contended that a considerable percentage of the wives and mothers of the working classes—and we might well add of the poorer middle class also—are overworked and ill provided, that they command no fair remuneration for their labour either in cash or kind, and have practically no security for *any*, though their labour is directly and on a large scale productive of wealth. But this being granted, the fact remains that women in general can take, and ought in the future to take, a much larger part in the work of production. Unless they do so no very great improvement in their economic position is likely to take place—or will indeed be possible.

Along with her new powers and privileges the "free woman" will have to shoulder some new burdens; and the first of these is to increase her economic output. Will women shirk the task? The temptation of the "fleshpots of Egypt" in the way of a parasitic life with comfort and ease "provided," with leisure and irresponsibility, may well prove too strong for some. But this temptation, in the hard times ahead of us, is not likely to assail so very many. And women's war-work record augurs well. When women come to realise the necessity, in the national interest as well as their own, of this increased production the majority will assuredly rise to the occasion, and they will then find that this new burden is a much lighter and more agreeable load than some of the old ones which it will enable them to shake off. The "lion in the path" is not likely to be women's want of will but the difficulty of finding under present conditions proper outlet and scope for their productive energies.

The position of helpless economic dependence in which long ages of subjection have placed women has resulted not only in the drudgery and penury of multitudes, but in the creation of numbers of wholly or partially unemployed women—women who are practically "unproductive consumers" and contribute nothing—in normal times—by head or by hand to the national income. Such are to be found in all classes of the community. "Unemployed" here does not altogether tally with "unoccupied," for some of the busiest women may fall into the category. It only means that their work, whatever it is, serves no useful purpose, or at any rate yields a wholly inadequate result. That this should be so is in most cases more women's fate than their fault. Idleness and inefficiency have been fostered, and often even enforced, by the conditions imposed on them. Every discouragement has been theirs that social conventions, that lack of suitable education and training, that poor rewards (no *carrières ouvertes aux talents*) and a very limited range of choice of employments could offer.

From similar causes it results that much of the hard work women actually do in many important fields is wasteful and inefficient. This is particularly true of their home work, and it is likely so to continue as long as men alone are responsible not

Women Magistrates.

WITH the passing of the Sex Disqualification (Removal) Bill into law there has come into effect a revolution in the standing of women the magnitude of which has hardly as yet been fully realised. One practical result of it—and a smallish one in the light of the larger activities that are simultaneously thrown open to women—is give immediate effect by the LORD CHANCELLOR announcement that at least a beginning in the appointment of women magistrates is to be made at once. The announcement is a timely proof that the new Act is not to be regarded as a dead letter, but, as will be seen from the terms of the LORD CHANCELLOR's statement, there is no official intention of proceeding with headlong haste in the dilution of the male magistracy. But a point in the outlined scheme that is much more open to criticism than the speed with which it is to take effect is the new machinery that is to govern the appointment of the women magistrates. The first few women J.P.'s (whose names are already given) are to constitute a central advisory committee that is to assist in the gradual appointment of their colleagues throughout the country. But if the appointment of male magistrates is best controlled by the local advisory committees set up by Lord LOREBURN, why should these committees be discarded in the case of women, and that case left in the hands of a body that cannot possibly be in close touch with widely scattered neighbourhoods and differing populations? The women who are needed on the Bench are not so much those who have nationally "distinguished themselves in the "public service or by the possession of ex-"ceptional private gifts"—the LORD CHANCELLOR's phrase, for all its amiability, is just a little too strongly reminiscent of old abuses in the appointment of male magistrates and the view which regards their post as a minor social distinction rather than a responsible office. Where women are needed for magistrates they are needed for their special knowledge of labour and social conditions in the districts where they live, and many of them have already gained, through service in connection with police court missions and in the care of juvenile offenders, a working knowledge of the duties that they could most usefully discharge. We do not see how a central committee is to discover such women with any informed accuracy. And if the existing local committees cannot be trusted with the work, then no more are they to be trusted with the appointment of male magistrates.

A NEW JOB FOR WOMEN.

Any suggestion of employment for women in these hard days is welcome. In pet-farming there is not merely a demand, but an outcry for capable women. It is an occupation, moreover, which does not require any long preliminary training or capital outlay.

In almost every family there is a pet of some kind—a dog, a cat or a bird. And it is a fact, though one not generally comprehended, that animals in becoming domesticated are liable to many of the ills that the human flesh is heir to.

Conscientious pet-possessors may seek the advice of a veterinary surgeon, but in many cases all that he can do is to prescribe careful nursing, and nursing of this kind means a full-time job.

It is a nurse that is the solution, not a "vet." At one time a "vet" would sometimes keep a nursery staffed with trained attendants for the treatment of sick pets, but this was abandoned owing to the stress of war work and to the difficulties of heating and getting labour.

There is a golden opportunity now for women to start similar establishments. The essentials are a fondness for animals, boundless patience and interest in the work, and a large room which can be kept moderately heated by a fire or stove.

The room must be fitted with wire-netting enclosures of a suitable size for dogs, but beyond this, nothing; the barer the room the better. If cat patients are also taken, another room will be necessary.

The lady nurse should work in conjunction with a vet and under his direction. The fees she can charge vary from 7s. 6d. to 12s. 6d. a week per animal, according to the amount of attention that is needed.

I know a Frenchwoman who makes a good living out of this kind of work. She came to England without friends or connections; she was, however, fond of animals, and she attached herself to a vet who is only too glad to recommend her to his clients, and she always has nine or ten dog patients in her nursery. JURYWOMEN.

Women over thirty years of age will henceforth be accorded the final privilege and responsibility of free citizens. As jurywomen they will sit in judgment on their fellow men and women, and it will be interesting to observe their attitude towards this new recognition. Will they deem it an irksome duty, and resort to expedients and subterfuges more subtle even than those of husbands, fathers, and brothers in their efforts to avoid it? Or will they welcome it in its more attractive aspect as an introduction to a phase of human activity without which no education can be said to be complete?

In either event, the result will have far-reaching effects. Women, hitherto, have studiously ignored the law, boasted their incomprehension of its subtleties, and waxed indignant at its insistence on giving a fair hearing to both sides of every case. Trained in this new school, it is not to be supposed that female characteristics will undergo no alteration. Their studies of human life in its infinitely varied aspects from the sordid to the sublime will be immeasurably widened, and though some may deplore this result, yet since the widest and fullest comprehension of human perplexities is indispensable to their solution, it is impossible to refuse congratulations or a welcome to the new explorers of our weaknesses and approvers of our virtues.

WOMEN AS JURORS.

THE Home Secretary's announcement that in boroughs where the panel of jurors is drawn from the burgess list women whose names are on such lists are now qualified to serve on juries, and that elsewhere the parish lists to come into force next year will include women, is of special interest. It is one more logical outcome of the extension of the franchise to women, and it is in a direction where more opposition has been met, perhaps, than any other. Prejudice dies hard, and that against women serving on juries was a very lively one. It was based on a distrust of woman's emotional nature. There was a feeling that a woman juror might allow her heart to rule her head, or might permit herself to be swayed from an impartial view by the eloquence of a particularly clever counsel. Cynics went farther, and expressed a fear that she might be so swayed by the manner in which that counsel brushed his hair or tied his tie. Six years ago this feeling was general; even now it has probably not entirely disappeared. But we now know by experience many things about the capacity of women for public duties which were hidden from us six years ago, and there is no reason why a woman should not prove herself as deserving of trust in this fresh sphere of activity as she already has in so many others equally new to her. In one direction in particular this new announcement will further the course of justice. It has always been an inherent principle of the law of these islands that an accused person had the right to be tried by his peers. In future this will be true in a sense deeper and wider than any that could have been contemplated at the time when that principle came into being. The principle took no account of sex. It might well have done so, for the spirit underlying it is that every accused person has the right to be tried by people who will be able to assess his motives at their proper value and sympathise with his reasons so far as they are sound. But differences of sex are far more fundamental than those of station. A duke would find it far easier to probe the mental processes of a dustman than those of a duchess. So it is a matter for real satisfaction to think that in future, when a woman is before the tribunal of the law, some at least of the "twelve good men and true" will be women. The cynics already referred to may point the finger of scorn, and request to be informed when a woman in trouble has ever received as much sympathy from another woman as she would from a man. There is, indeed, behind this question a great deal of evidence, from all kinds of sources and dealing with all classes, which gives the cynic good ground for his attitude of doubt. But the cynic would do well to note that woman is approaching public life in a very different frame of mind from that in which she has gossiped at her tea-table. Little pre-occupations are giving place to big interests. Women will have nothing to fear from the prospect of being tried by their peers.

INSTITUTE OF CHARTERED ACCOUNTANTS.

FIRST WOMAN FELLOW.

The thirty-ninth annual meeting of the Institute of Chartered Accountants was held yesterday at Moorgate-place, E.C., under the presidency of Mr. J. W. Woodthorpe, who, in the course of his Presidential address, reminded members that the institute was incorporated by Royal charter on 11th May, 1880, so that within a few days they would have been in existence for no less than forty years.

He said the members now numbered 5,079, or more than in August, 1914, notwithstanding the deplorable losses sustained during recent years. It was clear from the number of candidates for the forthcoming examinations that during the next three or four years the membership of the institute was going to be considerably augmented; he ventured to anticipate that in five years' time there would not be less than 7,000 members on their register.

With regard to the admission of women to membership, one woman ~~Miss Harris Smith~~ had been admitted to Fellowship, and she occupied the proud position of being the first and only woman chartered accountant in the world. Miss Smith had been in practice as a public accountant since 1878.

During the year a member was suspended from practice for giving a certificate based on estimates and prophesying as to future results. Members should be careful not to exceed their duty and should restrict themselves to certify as to facts only. Two or three cases had occurred in which members had allowed their names to be inserted as advertisers in classified trades directories' lists at the end of telephone directories. In conclusion, Mr. Woodthorpe urged every member of the institute to do his utmost to maintain the high standard to which the profession had been brought.

The report and accounts were adopted.

SOCIAL RECONSTRUCTION.

CULTURE FOR THE WORKER.

Some of the important social problems which will have to be grappled with after the war, and the lines on which a solution should be sought, are considered in a striking interim report which has been presented to the Minister of Reconstruction by the Committee on Adult Education, presided over by the Master of Balliol. The committee, consisting of representatives of employers, workers, and educationists, earnestly plead for such a reconstruction of the conditions of daily life and work as will afford men and women alike greater opportunities for satisfying that craving for education in its widest sense which is a permanent human need—the desire "for knowledge, for self-expression, for the satisfaction of intellectual, æsthetic, and spiritual needs, and a fuller life."

Evidence obtained from men and women, both students and tutors, in all branches of non-vocational adult education throughout the country shows that the industrial and social conditions of to-day are only too often of such a character as to form insuperable obstacles to adult education. What, in the committee's opinion, the chief obstacles are is best indicated by the proposals they put forward. These are briefly as follows:

A maximum legal working day of eight hours, with strict regulation of overtime and night work.

Effective measures to ensure reasonable security of livelihood by guarding against and mitigating the effects of unemployment.

Reasonable holidays with pay for wage-earners.

A comprehensive scheme of housing reform, in the carrying out of which women should have an effective voice.

Reconstruction in the conditions of rural life; a public hall for every village.

Excessive and irregular hours of work are specially pointed to by the committee as tending to unfit the worker for taking advantage of educational opportunities.

We are convinced that long hours, and irregular hours of labour, night work, and the "shift" system, deprive those who suffer from them of the freedom that all men prize, and the community of the full service of its citizens. The loss, both to the individual and to society, from conditions which thwart the desire for self-expression, it is impossible to calculate. The view that the community must suffer economic loss as a result of a shortening of working hours is not one to which modern economic science lends any confirmation, and it has indeed received an impressive practical refutation from investigations made by the Ministry of Munitions during the present war.

SECURITY OF LIVELIHOOD.

In the committee's opinion the maximum legal working day should not be more than eight hours, and in certain heavy and exhaustive kinds of work even eight hours appears to them too long. Overtime should be more closely regulated and reduced to a minimum, and there should be special consideration for workers whose hours of labour are irregular. Further, regular night work, except where absolutely essential, should be prohibited by law.

The report goes on to analyse the effects of monotonous work and to suggest that alternative forms of employment should be encouraged to counteract its depressing mental effect. "The more industry becomes a matter of machinery, the more necessary it becomes to humanise the working of the industrial system." Pointing to the fatigue not only of the muscles but of the nerves which affects heavy manual workers, the committee say that excessive labour regularly pursued "undoubtedly degrades those who follow it," and recommend that particularly exhausting occupations should be scheduled and more closely regulated by law, and that, wherever possible, mechanical devices should be introduced, so that these heavy, degrading forms of labour should be altogether superseded.

Unemployment, and not less the fear of unemployment, are serious obstacles to mind-culture on the part of the workers, and the committee recommend steps to guarantee them a reasonable security of livelihood either by some reorganisation of industry to minimise fluctuations in the volume of production or by some extension of the principle of insurance.

More generous treatment in the matter of holidays is strongly urged. The committee believe that a reasonable holiday without stoppage of pay would have a beneficial effect upon the national life, and they think it important that the present custom among salaried workers of payment during holidays should be extended to wage-earners and incorporated in the Factory Acts. They think it equally important that the weekly half-holiday should be extended by law to agricultural workers, and that Sunday workers should be given a week-day "off" in compensation.

WOMEN AND THE HOME.

Discussing the reaction upon human personality of the conditions of industrial life and of what they call "the industrial background," the committee remark that though the modern industrial system has solved the problem of supplying the material needs of the world's population and largely removed the gross evils of a century ago, when vast masses of the working population lived in abject misery, nevertheless the subtle mental influences of industrial life—as well as its physical influences—are often anti-social in their effects. The age of mechanical developments, with the growth of large firms as units and of central controlled administration has effectually degraded the worker until he has become a "mere cog in the machine." The degradation of human beings to the position of mere "hands" and the treatment of labour as a commodity to be bought and sold have created a revolt in the minds of a large section of the community. The conditions of industrial life have only too often outraged human personality.

It is not possible, in our view, to accept the suggestion that the exigencies of industrial efficiency are of such paramount importance that the development of personality must inevitably and rightly be subordinated to them. Industry exists for man, not man for industry, and, if it be true—as it is—that modern industrial conditions have often tended to deprive the worker of the education which he previously derived from the intrinsic interest offered by his work, that fact makes it doubly important to supplement their deficiencies by a humane and generous educational policy. Adult education, and, indeed, good citizenship, depend in no small degree upon a new orientation of our industrial outlook and activity.

Bad and insufficient housing is prominent among the social conditions which impede the development of intellectual interests, and in this connection the committee emphasise the special interest of women in reform. "With the extension of the franchise to some six millions of women, it is to be expected that in future women should take a larger interest in public affairs, and that they will turn to a greater extent than in the past to the acquisition of knowledge to fit themselves for their new responsibilities." But for many women under present conditions it will not be possible to find time for these new interests. The difficulties of their many and exacting duties are "aggravated by cramped, ill-arranged houses, built without thought of convenience, and innocent of labour-saving devices." A comprehensive scheme of housing reform is therefore of vital importance to women, and upon it will depend in no small measure the extent to which they will be able to play their part in public affairs and to develop intellectual and social interests. Hence the committee consider it important that housing reform should be hurried forward, and that women, who are the persons most concerned, should be included in the housing, town-planning, public health, and other committees dealing with this question.

A NEW ERA.

Reconstruction in the conditions of village life and work is regarded as no less important. For the rural population, the committee point out, there are very special disabilities—isolation of the individual, class prejudice, long hours, rare holidays, low wages, besides lack of opportunities for social life and for intellectual development. In some cases there is even opposition to their provision. "In the majority of cases where we started rural groups (said one witness, speaking of a southern county), the principal farmer in the neighbourhood attempted to upset it by going down and protesting in person."

A large number of villages are without any meeting place under public control. The village institutes are few and are usually under private control, not always of an enlightened kind. Church and chapel buildings are by no means always available for secular purposes. Good village libraries are few and far between. The committee recommend the provision of a hall under public control in every village, adding that the general question of accommodation for educational purposes will be considered in a further report.

They conclude with a striking appeal for closer consideration of the lot of the worker and of the handicaps by which his development is hindered or prevented.

Few can fail to feel the force of inspiration and experience which is being born of the war, or to recognise the strength of the new hope with which the people are looking forward to the future. The nation ardently desires to order its life in accordance with those principles of freedom and justice which led so many of its best sons into the field of battle. . . . A new era has come upon us. We cannot stand still. We cannot return to the old ways, the old abuses, the old stupidities. As with our international relations, so with the relations of classes and individuals inside our own nation. If they do not henceforth get better they must needs get worse, and that means moving towards an abyss. It is in our power to make the new era one of such progress as to repay us even for the unmeasurable cost, the price in life lost, in manhood crippled, and in homes desolated. . . .

To allow this spirit to die away unused would be a waste compared with which the material waste of the war would be a little thing. It would be a national sin, unpardonable in the eyes of posterity. . . . We have awakened to the splendid qualities that were latent in our people, the rank and file of the common people, who before the war were often adjudged to be decadent, to have lost their patriotism, their religious faith, and their response to leadership; we were even told they were physically degenerate. Now we see what potentialities lie in this people, and what a charge lies on us to give these powers full play. . . . We owe it to our dead that they shall not have died in vain, but that their sacrifice shall prove to have created a better England for the future generation.

PUBLISHER'S NOTE

File 703/44.

Please note that this election address has been reproduced elsewhere and we are therefore only filming the front page.

Please see 604 III/74.

FELLOW CITIZENS

AT the request of the STOURBRIDGE DIVISIONAL LABOUR PARTY, I have decided to stand as candidate for this Division at the forthcoming Parliamentary Election.

My candidature is endorsed by the National Labour Party, and has the warm support of the National Federation of Women Workers.

I STAND FOR THE AIMS and OBJECTS OF THE LABOUR PARTY, with whose comprehensive programme* you are doubtless familiar.

Its objects can be summarised as follows:—

TO UNITE ALL WHO CONTRIBUTE TO THE WEALTH AND WELFARE OF THE WORLD BY HAND OR BRAIN, TO SECURE, NOT PRIVILEGES FOR ANY SECTION OR CLASS OF THE COMMUNITY, BUT A FULL SHARE OF THE GOOD THINGS OF LIFE, MATERIAL AND SPIRITUAL, FOR ALL.

I DO NOT APOLOGISE FOR MY SEX. It takes a man and a woman to make THE IDEAL HOME, and I believe that neither can build THE IDEAL WORLD without the help of the other. In the new Parliament, where laws affecting every household in the land will be framed, the point of view of THE MOTHER, AS WELL AS THE FATHER, should find expression.

If I am returned to the House of Commons, I shall try to voice in a special sense the aspirations of THE WOMEN WORKERS OF THIS LAND, to whose cause I have been privileged to devote my life, and who, in every industrial centre in the United Kingdom and Ireland, are voluntarily contributing their pennies to the expenses of my Candidature.

I shall also feel entitled to speak for the WOMAN WHOSE WORK NEVER ENDS—the woman in the home, who faces and solves a multitude of problems every day—the woman who has been too often neglected or forgotten by politicians, the mother of the children upon whom THE FUTURE PRIDE AND STRENGTH OF THE NATION DEPENDS.

At the same time, I shall not be deflected from my duties to my constituents, men and women.

No legitimate grievance (individual or collective) which may be reported to me will remain unredressed, if it is humanly possible for me to get it rectified.

No reasonable request for any assistance within my power, as a Member of Parliament, and consistent with the Principles for which I stand, will be refused.

MY FOURTEEN POINTS

1.—A PEOPLE'S PERMANENT PEACE.

There must be NO MORE WAR, and the policy laid down by President Wilson seems to me most likely to achieve this aim. The Peace settlement must be based on Justice and Equity between the nations.

There must be an end of Secret Diplomacy. I am opposed to the contemplated SITTING IN SECRET of the Peace Conference. Its meetings must take place in the FULL LIGHT OF DAY. THE VOICE OF LABOUR FROM ALL LANDS—and not only from the vanquished countries—must be heard, and its accredited representatives must have place at the Council Table of the Nations.

*It is fully expounded in a pamphlet entitled "Labour and the New Social Order" which can be obtained by any elector on application.

The Rise of the "Unskilled"

THERE ARE MANY reasons which make the organization of skilled workers in Trade Unions far easier than that of the less skilled. The skilled workmen are better paid and can therefore more easily afford to make a regular contribution. Moreover they often pay a high contribution, receiving in return not only dispute benefit but also insurance against unemployment, sickness, and old age; and whatever the disadvantages of the mingling of "friendly" and fighting activities may be, it undoubtedly conduces to stability and permanence of organization, as well as to conservatism of spirit. Yet again, the skilled workers have a closer bond of craft pride and craft interest than is possible for the less skilled workers.

This of course is commonplace. What needs explaining is not the fact that organization has usually been weak among the less skilled workers, but the fact that during the years preceding the war and still more during the war period it has made remarkable strides. The number of members in the "general labor" Unions in Great Britain, which represent principally this type of workers, rose from 118,000 in 1910 to 366,000 in 1914, and the total is now something like 800,000. Why has this extraordinary growth taken place?

The principal explanation of the pre-war growth lies in the increasing prevalence of industrial unrest during the years preceding the war. Industrial unrest, which some call "the swing of the pendulum" of public opinion from political to industrial action, always means, naturally, a large accession to Trade Union membership. To this must be added as a further cause the fact that the sharp line of cleavage between the skilled and the unskilled was gradually being blurred, and that the tendency of machinery and management was towards the creation of a growing body of semi-skilled workers, recruited from the ranks of the unskilled, who encroached on the trades of the skilled workers and at the same time very greatly reduced the proportion of really unskilled workers in industry. Together with the growth of "semi-skill," went a tendency towards organization, not so strong as that of the skilled workers, but still appreciable and definite.

The creation of "semi-skill" was, of course, a process enormously accelerated by the war. Practically all the pre-war workers in the war industries were absorbed into jobs which were at least semi-skilled, and the lower ranges of jobs were more and more filled either by newcomers to industry, whether girls or adults, or by workers transferred from inessential or "sweated" trades. The whole body of semi-skilled and unskilled workers gained greatly in status as a result of war conditions. Also their pay in most cases increased; and even where this increase was offset by the rise in the cost of living, the expenditure of a few pence weekly on Trade Union membership seemed a far smaller thing than before.

At the same time a common consciousness began to grow up among the less skilled workers. They found the attitude of the old-established Unions toward them often hard and unsympathetic, because the skilled men often felt that the less skilled were doing them out of their jobs, and feared the cutting of rates by their competition in the crafts. The general labor Unions therefore grew, as it were, facing both ways. They confronted the employers with demands for better conditions, but they also confronted the skilled Unions with claims for better consideration. Their consciousness of their common opportunity and their common danger in industry took the place of craft spirit and acted as a powerful incentive to combination.

It is still an open question how far this consciousness, and the organization which has sprung from it, will survive the shock of the return to peace-time conditions. Severe unemployment or dislocation is likely at once to show its effect in a reduced membership in the general labor Unions. This type of membership has always been peculiarly unstable, and there are many who prophesy that it will not outlast the special conditions which called it into being. I do not know, but I believe that enough of it will survive to be a powerful factor during the coming years of reconstruction.

What, then, is the relation which this mass of newly organized workers bears, and is likely to bear, to the older established Trade Unions, and to the rank and file movements which I discussed in my last article? Clearly, there are large possible divergences of attitude between them, and these divergences, without wise handling, may easily become divergences of actual policy.

The official Trade Unionism of the skilled workers is apt to ignore, if not to repudiate, the claims of the less skilled. Its members have patriotically suspended during the war their customs and regulations, which it had cost them more than half a century of struggle to establish. They have received in return an absolute promise from the Government that these customs and regulations will be restored intact at the end of the war. To the redemption of that pledge they are clearly entitled; but their reasoning is apt to stop at that point, and to pay too

703a/2

little regard to the practical expediencies and exigencies of the situation.

The less skilled workers, on the other hand, conscious both of pre-war repression and of war-time service, are likely to adopt the standpoint of meaning to hold their gains, *J'y suis: j'y reste.* Some of them say in effect to the skilled workers: "We could not trust our interests in your hands before the war, and we cannot trust them now. The war has brought us into a position from which you selfishly excluded us before the war, and we are not prepared, because pledges have been given which do not bind us, to revert to our pre-war condition of servitude and inferiority." The case is not always so plainly stated, but that is the case, reduced to its essential elements.

Clearly this is a position which presents considerable dangers to the Trade Union movement. If the skilled and the less skilled workers spend time and effort in these internal struggles, the employers will reconstruct industry according to their own plans, and Labor will have no effective voice in its reconstruction.

This point however must not be pressed too far. It is still possible, and even likely, that the official Trade Unionism of the skilled workers and the official Trade Unionism of the less skilled, realizing their common danger, will reach at least a temporary agreement and meet the employers with a common program, in which each will concede something to the other. This is strongly to be hoped; and for this the best elements in both sections are working. But even if a temporary agreement is reached, and skilled and less skilled cooperate effectively in dealing with the problems of reconstruction, there will still remain big differences between them which it is essential to transcend if the recurrence of trouble is to be avoided.

The plain fact is that while the Trade Unionism of the skilled workers is built upon a basis of craft which excludes and antagonizes the unskilled, the Trade Unionism of the less skilled workers is largely based upon this antagonism, at least in the minds of many of the leaders. To mention only two of the most prominent, Mr. J. R. Clynes of the General Workers and Mr. J. N. Bell of the National Amalgamated Union of Labor have both dwelt frequently upon the function of the general labor Union in protecting the less skilled workers, not only against the employers, but against the skilled workers. The two forms of organization are thus built upon ideas which are mutually exclusive and partly antagonistic.

This means that in neither is there any resting place. The idea of craft and the idea of "no-craft" are alike inadequate to fit modern industrial conditions or to combine into a common program of a lasting kind. The need is for a bigger idea, and for a bigger basis of combination, to replace both alike.

We saw, in the last article, that the "rank and file" movement, which has its origin and its main strength among the skilled workers, is largely based on the repudiation of the "craft" principle and on the assertion of the rival principles of class and industry. We saw also that a considerable "rank and file" movement exists among the less skilled workers, though it is not so strongly organized as are the shop stewards of the skilled trades. The main difference is that, whereas the younger skilled workers tend to favor the combination in one Union of all the workers in a particular industry, whatever their degree of skill, the unskilled are led by their present form of association, which extends over most industries, to look forward rather to the combination in one Union of all workers, without regard to skill or industry. Reconciliation of these two problems is by no means impossible; but the difference of attitude is at present a barrier to effective common action and to the unity of all the advanced forces.

Union by class—the One Big Union idea—involves too sharp a break with the present to be immediately practicable. Union by industry can hard' be accomplished, in some industries at least, in i of the present strength of the general labor Unic The moral seems to be that the process of consolidation must be pushed as far as possible in each camp separately on the official side, and that in the shop steward and workshop committee movement the two must find their immediate field for common action and for propaganda. In the end, I believe that the One Big Union idea will prove to be the only way of straightening out the tangle of British Trade Union organization; but the time for that is not yet.

It may be a matter for surprise that in this article I have said nothing about the women workers as a distinct factor. The truth is that only in one respect can they be regarded as a distinct factor: generally speaking the women in the war trades count mainly as a section of the less-skilled workers, a majority of those who are organized being found in the general labor Unions which admit both sexes, and only a minority, though an active one, in the National Fe eration of Women Workers. The respect in whic the position of some women is different from that of the less skilled men is that, as the men have passed from the unskilled to the semi-skilled grades, the women have in many cases taken their place on unskilled work, though many women have of course been employed on semi-skilled and even on skilled jobs. The unskilled women and girls hold their

703a/3

position in the vital industries only precariously, and are unlikely to count for much as a factor in reconstruction. They must be considered and provided for; but they will not exercise any considerable force. Men's and women's interests will not diverge in any important respect: the real cleavage that needs healing is that between the skilled and the less skilled workers. This I believe can and will be temporarily met by mutual concessions; but it can only be met permanently by the emergence of a broader spirit and the achievement of a more comprehensive form of organization.

G. D. H. Cole.

The Modern Point of View and the New Order

VII

Live and Let Live

The nation's inalienable right of self-direction and self-help is of the same nature and derivation as the like inalienable right of self-help vested in an irresponsible king by the grace of God. In both cases alike it is a divine right, in the sense that it is irresponsible and will not bear scrutiny, being an arbitrary right of self-help at the cost of any whom it may concern. There is the further parallel that in both cases alike the ordinary exercise of these rights confers no material benefit on the underlying community. In practical effect the exercise of such divine rights, whether by a sovereign monarch or by the officials of a sovereign nation, works damage and discomfort to one and another, within the national frontiers or beyond them, with nothing better to show for it than some relatively slight gain in prestige or in wealth for some relatively small group of privileged persons or vested interests. And the gain of those who profit by this means is always got at the cost of the common man at home and abroad. These inalienable rights are an abundant source of grievances to be redressed at the cost of the common man.

It has long been a stale commonplace that the quarrels of competitive kings in pursuit of their divine rights have brought nothing but damage and discomfort to the peoples whose material wealth and man power have been made use of for national enterprise of this kind. And it is no less evident, though perhaps less notorious, that the pursuit of national advantages by competitive nations by use of the same material wealth and man power unavoidably brings nothing better than the same net output of damage and discomfort to all the peoples concerned. There is of course the reservation that in the one case the kings and their accomplices and pensioners have come in for some gain in prestige and in perquisites, while in the case of the competitive nations certain vested interests and certain groups of the kept classes stand to gain something in the way of perquisites and free income; but always and in the nature of the case the total gain is less than the cost, and always the gain goes to the kept classes and the cost falls on the common man. So much is notorious, particularly so far as it is a question of material gain and loss. So far as it is an immaterial question of jealousy and prestige, the line of division runs between nations, but as regards material gain and loss it is always a division between the kept classes and the common man; and always the common man has more to lose than the kept classes stand to gain.

The war is now concluded, provisionally, and peace is in prospect for the immediate future, also provisionally. As is true between individuals, so also among the nations, peace means the same thing as Live and Let Live, which also means the same thing as a world made safe for democracy. And the rule of Live and Let Live means the discontinuance of animosity and discrimination between the nations. Therefore it involves the disallowance of such incompatible national pretensions as are likely to afford ground for international grievances—which comes near involving the disallowance of all those claims and perquisites that habitually go in under the captions of "national self-determination" and "national integrity," as these phrases are employed in diplomatic intercourse. At the same time it involves the disallowance of all those class pretensions and vested interests that make for dissension within the nation. Ill will is not a practicable basis of peace, whether within the nation or between the nations. So much is plain matter of course. What may be the chances of peace and war, at home and abroad, in the light of these blunt and obvious principles taken in conjunction with the diplomatic negotiations now going forward at home and abroad—all that is sufficiently perplexing.

At home in America for the transient time being, the war administration has under pressure of necessity somewhat loosened the strangle-hold of the vested interests on the country's industry; and in so doing it has shocked the safe and sane business men

703a|4

into a state of indignant trepidation and has at the same time doubled the country's industrial output. But all that has avowedly been only for the transient time being, "for the period of the war," as a distasteful concession to demands that would not wait. So that the country now faces a return to the precarious conditions of a provisional peace on the lines of the status quo ante. Already the vested interests are again tightening their hold and are busily arranging for a return to business as usual; which means working at cross-purposes as usual, waste of work and materials as usual, restriction of output as usual, unemployment as usual, labor quarrels as usual, competitive selling as usual, mendacious advertising as usual, waste of superfluities as usual by the kept classes, and privation as usual for the common man. All of which may conceivably be put up with by this people "lest a worse evil befall." All this runs blamelessly in under the rule of Live and Let Live as interpreted in the light of those enlightened principles of self-help that go to make up the modern point of view and the established scheme of law and order, although it does not meet the needs of the same rule as it would be enforced by the exigencies of the new order in industry.

Meanwhile, abroad, the gentlemen of the old school who direct the affairs of the nations are laying down the lines on which peace is to be established and maintained, with a painstaking regard for all those national pretensions and discriminations that have always made for international embroilment, and with an equally painstaking disregard for all those exigencies of the new order that call for a de facto observance of the rule of Live and Let Live. It is notorious beyond need of specification that the new order in industry, even more insistently than any industrial situation that has gone before, calls for a wide and free intercourse in trade and industry, regardless of national frontiers and national jealousies. In this connection a national frontier, as it is commonly made use of in current statecraft, is a line of demarkation for working at cross-purposes, for mutual obstruction and distrust. It is only necessary to recall that the erection of a new national frontier across any community which has previously enjoyed the privilege of free intercourse unburdened with customs frontiers will be felt to be a grievous burden, and that the erection of such a line of demarkation for other diplomatic work at mutual cross-purposes is likewise an unmistakable nuisance.

Yet in the peace negotiations now going forward the gentlemen of the old school to whom the affairs of the nations have been "entrusted"—by shrewd management on their own part—continue to safeguard all this apparatus of mutual defeat and distrust—and indeed this is the chief or sole object of their solicitude, as it also is the chief or sole object of these vested interests for whose benefit the diplomatic gentlemen of the old school continue to manage the affairs of the nations.

The state of the case is plainly to be seen in the proposals of those nationalities that are now coming forward with a new claim to national self-determination. Invariably any examination of the bill of particulars set up by the spokesmen of these proposed new national establishments will show that the material point of it all is an endeavor to set up a national apparatus for working at mutual cross-purposes with their neighbors, to add something to the waste and confusion caused by the national discriminations already in force, to violate the rule of Live and Let Live at some new point and by some further apparatus of discomfort.

There are nationalities that get along well enough, to all appearance, without being "nations" in that militant and obstructive fashion that is aimed at in these projected creations of the diplomatic nation-makers. Such are the Welsh and the Scotch, for instance. But it is not the object-lesson of Welsh or Scottish experience that guides the new projects. The nationalities which are now escaping from a rapacious imperialism of the old order are being organized and managed by the safe and sane gentlemen of the old school, who have got their notions of safety and sanity from the diplomatic intrigue of that outworn imperialism out of which these oppressed nationalities aim to escape. And these gentlemen of the old school are making no move in the direction of tolerance and good will—as how should they when all their conceptions of what is right and expedient are the diplomatic preconceptions of the old regime. They, being gentlemen of the old school, will have none of that amicable and unassuming nationality which contents the Welsh and the Scotch, who have tried out this matter and have in the end come to hold fast only so much of their national pretensions as will do no material harm. What is aimed at is not a disallowance of bootless national jealousies, but only a shift from an intolerable imperialism on a large scale to an ersatz-emperialism drawn on a smaller scale, conducted on the same general lines of competitive diplomacy and serving interests of the same general kind—vested interests of business or of privilege.

The projected new nations are not patterned on the Welsh or the Scottish model, but for all that there is nothing novel in their design; and how should there be when they are the offspring of the imagination of these safe and sane gentlemen of

703a/5

THE LANCET.

LONDON: SATURDAY, MAY 24, 1919.

Women in Industry.

THE report of the War Cabinet Committee on Women in Industry, which has just been presented to Parliament, is a document of the first interest. The Committee, it may be remembered, was composed of the following members: Sir J. R. ATKIN, Miss JANET CAMPBELL, M.D., Sir L. L. MACASSEY, K.C., Sir W. W. MACKENZIE, K.C., Mrs. SYDNEY WEBB, and Sir MATTHEW NATHAN, who acted as secretary, assisted by Mr. J. C. STOBART. For a time Mr. J. L. HAMMOND sat on the Committee as representative of the special Women's Employment Committee of the Ministry of Reconstruction. The War Cabinet Committee was appointed to investigate and report on the relation which should be maintained between the wages of women and men, having regard to the interests of both, as well as to the value of their work. Further, the Committee was asked in its recommendations to think not only of the output necessitated by the war, but of the progress and well-being of industry in the future. Several alterations in circumstances since the original reference to the Committee have obviously taken place, owing to the suspension of hostilities, making the output of war material a matter of history, while the grant of unemployment donations introduced a new factor into the deliberations. The report took definite colour from these circumstances.

The recommendations of the Committee, dealing with the principles governing the relations between men's and women's wages—alike those suggesting the respective remuneration of men and women, those dealing with the conditions of the future employment and wages of women, and, lastly, those replying to the various allegations as to non-fulfilment of Government pledges to women—will certainly be circulated in full for the immediate and earnest attention of all employers and all employed, which in the Great Britain of the future is another way of describing the great majority of the adult population. They form 31 brief, businesslike, and drastic messages to the public, and are covered to some extent by the first, which runs: "That women doing similar or the same work as men should receive equal pay for equal work in the sense that pay should be in proportion to efficient output." This recommendation is intended to cover the principle that on systems of payment by results equal payment should be made to both sexes for equal accomplishment, while the relative value of the work done by women and men employed on time, on the same or similar work, should be agreed between employers and trade-unions, acting through recognised channels of negotiation, as, for instance, Trade Boards or Joint Industrial Councils. The recommendations take note of the introduction of women to do work hitherto performed by men, the onus of proving that the women's work is inferior to the men's work lying with the employer; and if, in order to maintain the principle of equal pay for equal work, it is essential to employ men and women of the same grade, capacity, and training, equal pay is found not to attract the same grade of man as of woman, then the difference of attractiveness, it is suggested, may be counteracted by the payment to married men of children's allowances. It is unnecessary to medical readers to dwell on the vital importance of this recommendation. A valuable memorandum from Dr. JANET CAMPBELL upon the health of women in industry follows the majority recommendations of the Committee, from which Mrs. SYDNEY WEBB alone dissents in a minority report. Mrs. WEBB dwells on the industrial chaos produced by the war, rejects the principle of individual bargaining and the formula "equal pay for equal work," and recommends the adjustment of money wages to meet increases in cost of living, and the adoption of the principle that there must be closer correspondence of occupational rates to relative efforts and needs. Mrs. WEBB'S able document indicts the Government for ignoring the pledge given to women that, where substituted for men in the performance of war work, they should receive the same pay.

The relation of men's and women's wages being clearly dependent in large measure on the relative health and physical capacity of the two sexes—for physical and industrial efficiency are mutually interdependent—the medical issues raised by the inquiry are thus fundamental, and Dr. JANET CAMPBELL has dealt with them thoroughly. After discussing the general and physiological considerations arising out of the physical development of women, the function of maternity, the relative amount of food required by men and women respectively, and the particular bearing of industrial fatigue and its causes in relation to women, Dr. CAMPBELL outlines the conditions in which women were employed prior to the war. It is difficult to differentiate the effect of employment upon the health of the woman worker from the effect of social conditions in general—indeed, Dr. CAMPBELL says that it is admitted to be impossible to obtain particulars of the occupational death-rates of women, and not easy to state definitely the ailments which arise directly from employment; but she comes to the conclusion that while the conditions of work have been such as not to cause actual disablement and disease, they have favoured general constitutional ill-health and lowered power of resistance. Women have been attracted by the conditions of work yielding relatively high pay, and neither they nor their employers have appreciated the serious damage to health which might possibly result. This is a state of things which existed before war employment exaggerated its effects. The incidence of sickness among women was revealed for the first time under the operations of the National Health Insurance Act, when a remarkable frequency of minor and major sickness among girls and young women came to light. The Departmental Committee on Sickness Benefit

703a/6

Claims, appointed under the National Insurance Act to inquire into alleged excessive claims in regard to sickness benefit, showed a great deal of anæmia and debility directly attributable to the conditions of employment, and proved that the impression among medical men that the amount of sickness was greater among women than among men was justified beyond a doubt. Further evidence received by the War Cabinet Committee has supported and emphasised the fact. Again, an indication of the injury to health which may follow increased industrialism among women is suggested by the rise in the tuberculosis death-rate during the war. A Special Committee of the Medical Research Committee, under the chairmanship of Dr. LEONARD HILL, has, in the columns of THE LANCET,[1] discussed recently the high incidence of phthisis in the urban male population, and Professor BENJAMIN MOORE, a member of this Special Committee, pointed out that after the thirtieth year of age there was found a great preponderance of the disease among urban males not shared by females, attributing the circumstance to the conditions of daily occupation. Since 1914 the mortality rate of tuberculosis among urban women is shown by Dr. T. H. C. STEVENSON, Superintendent of Statistics, General Register Office, in a review of the vital statistics of the country for 1916, to have undergone substantial increase, and there is no doubt that the subjection of women, at a susceptible age, to increased risks of infection has had a serious outcome. Dr. JANET CAMPBELL'S general conclusions cannot be summed up by stating that the average woman is physically weaker than the average man, but her opinion that she cannot compete with him satisfactorily in operations requiring considerable physical strength will be generally accepted. Competition between the average man and the average woman in operations of even a less arduous and exacting character may be detrimental to the woman's health, in that her power of endurance and her reserve energy are usually less than a man's, while she is often obliged to spend time and strength on domestic tasks which do not fall to his lot. That is the great point, and this valuable report teems with information to us all as to the various social difficulties which underlie the situation, their causes, their fostering influences, and their remedies.

The Hygienic Conscience in Relation to Coal-getting.

THE Coal Industry Commission as they proceed with their deliberations are clearly establishing one fundamental matter—viz., the absence of reliable and scientifically collected information relating to the social conditions and well-being of miners, and yet, after agriculturists, they form numerically the largest industrial group in the kingdom. When the question of their hours of labour was under review no information was forthcoming as to the interdependence in the mining industry of fatigue and output; or as to the effect upon working capacity of the high humid temperature often existing in mines. The housing conditions are now admitted to be bad, but no investigation has established the number of miners' families domiciled in one, two, three, or four rooms; but the conditions were drawn attention to in CHADWICK'S reports as long ago as 1842. Beat knee, beat hand, and beat elbow occur, but their distribution according to process is not worked out. The miner is compensated, the owner is insured: there the matter ends. The miner works in darkness, and may say with Wên T'ien-hsing: "My dungeon is lighted by the will-o'-the-wisp alone; no breath of spring cheers the murky solitude in which I dwell"; nystagmus follows; the miner is compensated; the owner is insured; no remedy is found. Explosions and accidents occur, and these are considered in a fashion. They are intimately associated with getting the coal upon which dividends and royalties depend, and they must be kept in check somehow.

Evidence is presented that the mortality of miners, apart from accidents, compares not unfavourably with that of agriculturists. True; but mortality rates do not tell of oscillating eyeballs and crooked joints. Compare rather a miner 70 years of age—there are a few—with an agricultural labourer of that age. Yet evidence has declared that the miner must once have been strong in wind and limb in order to have become a miner. Appeals to statistics resemble the waters of the Dead Sea—buoyant, indeed, but brackish: no amount of figures will make us think well of the social conditions at present existent in the mining industry. Whatever step may be taken with regard to the nationalisation of mines, we would urge with all emphasis that immediate action be taken on the lines suggested by Dr. FRANK SHUFFLEBOTHAM, who gave evidence out of his experience in the Ministry of Munitions. His recommendations were:—

1. That provision be made for reducing the temperature of hot seams in the coal-mines, and that a temperature of greater than 77° (Fahr.) (wet bulb) be regarded as injurious to the health of the worker.
2. That the question of increased candle-power of the miners' safety lamp be considered without delay.
3. That the housing question of miners be dealt with in a practical way, and with all possible speed.
4. That investigations be made by a Research Committee as to the causation and prevention of miners' diseases.
5. That means be taken to ensure the best possible after-treatment for miners who sustain injuries or contract diseases which are directly due to their employment in the mines.

The first of these recommendations embodies the actual standard adopted in France, and every one of them requires only a moment's attention to see that it embodies a practical reform. That improvements in conditions of labour are possible of attainment under State control has recently been demonstrated by the pioneer work of the Ministry of Munitions during only three years. Workers were housed; canteens were erected; washing accommodation and cloak-rooms were provided; personal supervision was established; and doctors working whole-time were appointed to different factories, directed in their work by a medical headquarters staff associated with a

WOMEN IN THE LEAGUE ADMINISTRATION.

DANGER OF "CRANK" CANDIDATES

Representatives of various women's organizations in the country met in conference at Caxton Hall yesterday to consider the best methods of securing the representation of women in the working of the League of Nations. It is provided in the Covenant of the League that all positions connected with the League, including the secretariat, shall be open equally to men and women, and the women's organizations propose to submit to the Government a list of suitable candidates for appointment upon the various bodies.

Mrs. Rackham presided. She said that their object was to put into effective action the words contained in the League of Nations Covenant. As the vagueness of the League of Nations proposals was a challenge to the democracy of the world, so were those words in Article 7 of the Covenant a challenge to women. They desired to make these words effective by selecting women who were most capable of service.

Resolutions urging upon the Government the just demand for representation of women in the Assembly of Delegates, in the International Court of Justice, and in all commissions and other bodies set up in connexion with the League, were submitted and passed.

Miss Mary Macarthur, of the Standing Joint Committee of Women's Organizations, strongly contended that no one should be appointed to any office simply because she was a woman, but, on the other hand, she should not be excluded for the same reason.

Miss Allen argued that women should be more fully represented upon the delegation to the forthcoming American Labour Congress at Washington. It was the present intention of the Government, she said, to send a male Labour delegate, a male Capital delegate, and, so far as Labour was concerned, four male advisers and only one woman adviser.

Lady Selborne, of the National Council of Women, was alone in her opposition to a resolution urging that in making appointments to all bodies connected with the League of Nations the Governments of the various countries should consult the most representative bodies of organized women of each nation. She maintained that the whole of the womanhood of the country should be consulted, for if organizations only were consulted they would be in danger of being represented by "cranks." She would like to see the representation of the normal women of the country, the wives and mothers, of whom there were many who would be more fit to represent them than many organized women.

The resolution was carried.

Recommending Candidates.

Various schemes for the nomination and recommendation of women representatives were discussed, and a resolution, proposed by Miss M. Macarthur, was ultimately carried to the effect that measures be taken by a provisional committee to receive and consider, and, if necessary, to recommend from, nominations of women to be submitted to the British Government and the League Secretariat as suitable for appointment on the various bodies or in the capacities for which the Government or the Secretariat are responsible. The recommendations will be submitted to a further meeting of the conference.

Lady Selborne said that in order to get the best suited women, party qualifications should be eliminated as far as possible, and in putting forward candidates it would be better to mention only the public work of the individual.

It was decided also to invite the cooperation of women in other countries, and a resolution was carried urging the setting up of machinery in connexion with the League of Nations for holding an annual International Women's Conference, and for the establishment of a permanent International Women's Office, similar to that of the International Labour Conference and the International Labour Office already set up.

future.

NURSES AND THE NATION.

The Women's Conference held last week at Caxton Hall was one which, as women of the nation, closely concerned nurses. It was convened to consider the representation of the female sex on the League of Nations, and the best form this representation could take. Many notable women were present, including Mrs. Rackham, who made a wise, just, and equable Chairman; Miss MacArthur, the Countess of Selborne, Miss Gibson (late matron of Birmingham Infirmary), Miss E. C. Barton, R.R.C., Miss Amy Hughes, Mrs. Bedford Fenwick, and Miss Blanchard (of the Women's Sanitary Inspectors' and Health Visitors' Association). Resolutions were passed urging the Government to demand representation of women in the Assembly of Delegates, in the International Court of Justice, and other bodies set up in connection with the League of Nations. Much difficulty arose over the question of the wisest method of putting before the Government the most able women to act as representatives. It was ultimately suggested that in making appointments the Governments of the various countries should consult the most representative bodies of organised women in each nation. Lady Selborne dissented, as she considered the whole of the womanhood of the country should be consulted. She feared that if only the organised societies were consulted they might be represented by cranks. A resolution was passed inviting women of other countries to co-operate with Great Britain in order to secure the establishment of a Women's International Conference, to meet annually.

Morning Post 4.9.'19.

THE LEAGUE OF NATIONS.

Women's Representation in the Various Offices.

Representatives of various women's organisations in the country met in conference at Caxton Hall yesterday to consider their representation in the League of Nations and the best methods of securing such representation. It is provided in the Covenant of the League that all positions connected with the League, including the Secretariat, shall be open equally to men and women, and the women propose to submit to the Government a list of suitable candidates for appointment upon the various bodies, or in the capacities for which the Government or the Secretariat is responsible. Mrs. Rackham presided.

Resolutions urging upon the Government the just demand for representation of women in the Assembly of Delegates, in the Internatioual Court of Justice, and on all Commissions and other bodies set up in connection with the League were submitted and passed.

Speaking in support, Miss Mary Macarthur, of the Standing Joint Committee of Women's Organisations, strongly contended that no one should be appointed to any office simply because she was a woman, but, on the other hand, she should not be excluded for the same reason.

Miss Allen argued that women should be more fully represented upon the delegation to the forthcoming American Labour Congress at Washington. It was the present intention of the Government, she said, to send a male Labour delegate, a male Capital delegate, and, so far as Labour was concerned, four male advisers and only one woman adviser.

Mrs. Allen Bright, of the National Council of Women, strongly advised the application of pressure on the Government, which, she said, was noticeably susceptible to pressure, and for this purpose the strong combination of women's organisations was essential.

Fear of "Cranks."

The Countess of Selborne, of the National Council of Women, was alone in her opposition to a resolution to the effect that in making appointments to all bodies connected with the League of Nations the Government of the various countries should consult the most representative bodies of organised women of each nation. She maintained that the whole of the womanhood of the country should be consulted, and not only those connected with organisations, for if the latter only were consulted they would be in danger of being represented by cranks. She would like to see the representation of the normal women of the country, the wives and mothers, of whom there were many who would be more fit to represent them than many organised women.

The resolution was carried re-

Various schemes for the nomination and commendation of women representatives were discussed, and a resolution, proposed by Miss M. Macarthur, was ultimately carried to the effect that measures be taken by a provisional committee to receive and consider and, if necessary, to recommend from nominations of women to be submitted to the British Government and the League Secretariat as suitable for appointment on the various bodies or in the capacities for which the Government or the Secretariat are responsible. The recommendations will be submitted to a further meeting of the conference. Opinions differed as to the advisability or otherwise of indicating the organisation responsible for the nomination of each candidate.

Political Women.

The Countess of Selborne pointed out as an objection that a great many women's organisations were party political. In order to get the best suited women party qualifications should be eliminated as far as possible, especially in dealing with international questions, and for that reason she submitted it would be better to mention only the public work of the individual.

It was decided also to invite the co-operation of women in other countries, and a resolution was carried urging the setting-up of machinery in connection with the League of Nations for holding an annual International Women's Conference, and for the establishment of a permanent International Women's Office, similar to that of the International Labour Conference and the International Labour Office already set up.

NEW VOCATION FOR THE WOMAN OF 40.

"HOME HELPS" TO RELIEVE SICK WIVES WITH HOUSEHOLD DUTIES.

INDUSTRIAL COUNCIL'S BUREAU

In the opinion of the Women's Industrial Council the right class of work has been found for the much-discussed woman of 40.

Looking round on the England which has emerged from the war, the members of the council have noticed two things:—

1. Numbers of women, aged 40 and over, who have been left with little or no incomes and no specialised training.
2. Many households lacking just the responsible help that would release the mistress of the house from some of her house duties when there is sickness in the home.

To bring into touch the women whose knowledge of domestic affairs is their great asset, and the women who could obtain an hour or two of much-needed leisure if they had an efficient understudy, the council have decided to open a bureau, which has been registered by the L.C.C.

Home-helps is the promising name the council has chosen for the women who are to find that they are of great use in the post-war world after all.

FOR CASES OF SICKNESS.

Discussing the project with a "Daily Chronicle" representative yesterday, an official of the Women's Industrial Council explained that the home-helps are primarily intended to go to homes where the ordinary routine has been upset by sickness.

"This new class of household assistant is not intended to interfere with the trained nurse's work. That is not her vocation. Neither is she intended to replace a servant.

"But our inquiries have shown that there is a great need for educated, tactful women who can go into a household where the mistress is sick, or where she is fully occupied with a case of sickness, and can run the house for her and attend to the many duties that fall to the lot of the mistress of a house, even when there is a staff of servants.

RED CROSS CERTIFICATES.

"These home-helps might sit with patients while the nurse has her day off. They might attend to the affairs of a small household, the head of which has had to give up and go to bed for some minor reason which hardly means real illness. In case of serious illness they might look after the children, keep things running smoothly, do the shopping or ordering, or the dusting, &c., which the mistress of the household usually does herself.

"Our home-helps will be required to take the Royal Red Cross certificate in first aid, home nursing, and invalid cookery. They will not be for the use of people who cannot afford to pay a living wage, because other agencies exist to afford help in such cases. They will ask not less than 10d. an hour, 5s. a day with food, or 25s. a week if they live in the house.

"It has been a great pleasure to everyone who has had anything to do with arranging the scheme to find how delighted the women who have come to us to be registered as home-helps have been to learn that they are likely to be of some use after all.

RIGHT TYPE OF WOMAN.

"Many of them have pensions which are entirely inadequate in these days. Some are the widows of professional men and of Service men. Some are women whose husbands are still alive, but who find it necessary to augment their joint income.

"We have been very much impressed by the charming women who have come to us, through the various associations which have been informed of our scheme. Most of them probably never expected to have to earn money for themselves. All their attention was concentrated in the past on running homes, either for themselves or for their parents, or other relatives.

"We feel that we have got into touch with the right type of women for our purpose—that is, educated women who can be trusted, and who have the necessary social instinct to enable them to be an acquisition to a household."

Women who wish to become home-helps, or women who want to engage one, should apply at the offices of the Women's Industrial Council, 6, York-buildings, Adelphi, W.C., on Tuesdays, Thursdays, or Fridays, between the hours of 10.30 and 12.30. Telephone, Gerrard 3872.

Women and the League of Nations.

A conference of women representing 95 societies and associations met at Caxton Hall to discuss the clause in the League of Nations Covenant which declares that "All positions under, or in connection with, the League, including the secretariat, shall be open equally to men and women.' If either the British Government, or the League of Nations when it comes into being finally, think that women are going to be contented with a few minor posts, I gather that they will be quickly undeceived, for the Conference was unanimous about the importance of "adequate" representation of women of all nations.

Evening Standard
5. 9. '19

Outstanding Delegates.

About the means that were to be taken to secure this representation there was, I confess, a good deal of difference, and at times the atmosphere was a trifle electric. I could not help being struck by the tact and cleverness with which the two foremost Labour women—Mrs. Andersen and Dr Marion Phillips—managed to compose differences and throw oil on troubled waters, and generally, without anyone noticing it, get all their own way. The idea of the Conference, according to a letter read from the Marchioness of Aberdeen, originated with her pet National Council of Women of Great Britain and Ireland, which had done much of the necessary organisation. Mrs. Ogilvie Gordon held her own for the Council very well, and among other lucid speakers were Mrs. Swannick and Mrs. Rackham (in the chair).

The Value of Clarity.

The absolute necessity for real clarity of thought among women and the importance of being able to make impromptu speeches without wandering from the point was once more clearly demonstrated by the Conference.

The women who knew what they wanted to say and were able to say it convincingly were very few—and, with one or two exceptions, the women who represented the more moderate section of women's thought did not contrast at all favourably with the advanced section. It is a point worth noting.

CORISANDE.

WOMEN AND THE LEAGUE.

A conference of women's organisations to urge the necessity of securing the representation of women in the League of Nations was held at Caxton Hall today.

Miss Mary Macarthur moved a resolution urging the need of the representation of women on the governing bodies of the League.

This was agreed to.

Mrs. Allen Bright said that all Governments were susceptible to pressure—the present Government notably so, and she advocated such pressure being applied so that women should not merely have a nominal, but a real place in the counsels of the League of Nations.

WOMEN'S LABOUR LAWS.

Miss Macarthur Pleads for Proper Representation in Washington.

Miss Mary Macarthur, at a women conference on the League of Nations at Caxton Hall to-day, protested against what she believed to be the Government's decision to be represented at the International Labour Conference in Washington next month by five men and one woman.

"I am one of those women," said Miss Macarthur, "who is prepared to admit that a good man may be better than an indifferent woman; but a good woman is better than an indifferent man. Our Government circles seem to think that any man is better than any woman.

"In Washington all the subjects to be discussed affect women in some degree; some affect women exclusively.

"We must be thankful for small mercies, but it would be more appropriate if of the five advisers four were women and only one a man."

One delegate expressed the hope that women would be represented on the service committees of the League of Nations by members of the three women's services.

A CRANK ON CRANKS

WOMEN AND LEAGUE OF NATIONS.

How to secure the representation of women on the League of Nations was discussed yesterday by women's societies at Caxton Hall, Westminster.

Miss Mary MacArthur moved that in making appointments in connection with the League Governments should consult the most representative bodies of organised women.

Lady Selborne, who alone voted against this resolution, maintained that the whole womanhood of the country should be consulted, and not only those women connected with organisations.

"We are regarded as cranks, and I am proud of being a crank myself, but there are all round us the great mass of the nation—normal, that is, not cranks—whose sound commonsense is one of the great pillars of society. It is the commonsense of these women that I want to get on to any representative body such as this might be."

It was decided to invite women's societies of other countries to co-operate by forming national committees, with a view to setting up an international committee.

Daily Herald 5.9.19.

WOMEN AND LEAGUE

CAXTON HALL CONGRESS' DEMANDS

A conference of women's organisations to urge the necessity of securing the representation of women in the League of Nations was held at Caxton Hall yesterday. Mrs. Rackham, who presided, said the object of the conference was to try to transform into effective action the words of the League of Nations Covenant, which said that all positions under the League which applied to men should equally be open to women.

Miss Mary Macarthur, on behalf of the Standing Joint Committee of Industrial Women's Organisations, moved a resolution urging the need of the representation of women on the governing bodies of the League. This was agreed to.

Another resolution moved by Miss Macarthur made the demand that in making appointments in connection with the League the Governments of the various countries should consult the most representative bodies of organised women. She pointed out that it was necessary to have the most suitable women for the job, and they were not always the women who were in the limelight or whose names were frequently in the Press.

The Countess of Selborne pointed out that the conference did not by any means represent the whole of the female opinion of the country. "We are regarded as cranks," said her ladyship.

Daily Chronicle 5.9.19.

LEAGUE OF NATIONS.

WOMEN DEMAND A SHARE OF BRITISH REPRESENTATION.

Representatives of women's organisations in conference yesterday at Caxton Hall passed resolutions urging upon the Government the just demand for representation of women in the Assembly of Delegates, in the International Court of Justice, and in all Commissions and other bodies set up in connection with the League of Nations.

Miss Mary MacArthur, of the Standing Joint Committee of Women's Organisations, strongly contended that no one should be appointed to any office simply because she was a woman, but, on the other hand, she should not be excluded for the same reason.

The Countess of Selborne, of the National Council of Women, maintained that the whole of the womanhood of the country should be consulted, and not only those connected with organisations, for if the latter only were consulted they would be in danger of being represented by cranks. She would like to see the representation of the normal women of the country, the wives and mothers, of whom there were many who would be more fit to represent them than many organised women.

Daily Telegraph - 5.9.19.

LEAGUE OF NATIONS.

WOMEN'S REPRESENTATION.

Representatives of women's organisations in the country met in conference at Caxton Hall yesterday, to consider their representation in the League of Nations, and the best methods of securing such representation. It is provided in the covenant of the league that all positions connected with the league, including the secretariat, shall be open equally to men and women, and the women propose to submit to the Government a list of suitable candidates for appointment upon the various bodies, or in the capacities for which the Government or the secretariat are responsible. Mrs. Rackham presided.

Resolutions urging upon the Government the just demand for representation of women in the Assembly of Delegates, in the International Court of Justice, and in all commissions and other bodies set up in connection with the league were passed.

The Countess of Selborne, of the National Council of Women, was alone in her opposition to a resolution to the effect that in making appointments to all bodies connected with the League of Nations the Government of the various countries should consult the most representative bodies of organised women of each nation. She maintained that the whole of the womanhood of the country should be consulted, and not only those connected with organisations, for if the latter only were consulted women would be in danger of being represented by cranks. The resolution was carried.

Various schemes for the nomination and recommendation of women representatives were discussed, and a resolution, proposed by Miss M. Macarthur, was ultimately carried to the effect that measures be taken, by a provisional committee, to receive and consider, and, if necessary, to recommend from, nominations of women to be submitted to the British Government and the League Secretariat as suitable for appointment on the various bodies or in the capacities for which the Government or the Secretariat are responsible. The recommendations will be submitted to a further meeting of the conference. Opinions differed as to the advisability or otherwise of indicating the organisation responsible for the nomination of each candidate.

It was decided to invite the co-operation of women in other countries, and a resolution was carried urging the setting up of machinery in connection with the League of Nations for holding an annual International Women's Conference, and for the establishment of a permanent international women's office similar to that of the International Labour Conference and the International Labour Office already set up.

A deputation on the subject of women's appointments at the International Labour Bureau waited upon Mr. Barnes at the War Cabinet Committee offices on Monday. The interview, which was organised by the Women's Industrial League, arose out of the previous deputation taken by the same League to Mr. Barnes in July, when a demand was made for direct representation at the International Labour Conference.

Mr. Barnes, in his reply, said he had every sympathy with the two pleas urged on behalf of the women now being displaced from Government offices, and against the exclusion of women from a fair chance of obtaining positions in administrative work. As regards the promise made to the deputation in July, he was unable to go further than his undertaking that all posts should be equally open to men or women without distinction of sex, where qualifications were equal. It was open to the deputation to suggest names, which he (Mr. Barnes) would submit to the Director of the International Labour Office. The number of such names should be limited, and it was essential that only fully qualified women, able to speak French as well as English, should be suggested.

Morning Post 4.9.19 - 703 B.

WOMEN AS STATE WORKERS.

Undertaking by Mr. Barnes.

Mr. G. N. Barnes, Minister without Portfolio, received at the War Cabinet Committee Offices a deputation organised by the Women's Industrial League with reference to the displacing of women from Government offices and women's appointments at the International Labour Bureau.

In reply to the several speakers Mr. BARNES said he had every sympathy with the two pleas urged, namely, on behalf of the women now being displaced from Government offices, and also against the exclusion of women from a fair chance of obtaining positions in administrative work. As regards the promise made to the deputation in July, he was unable to go further than his undertaking that all posts should be equally open to men or women, without distinction of sex, where qualifications were equal. The power to make appointments, however, to the International Labour Office did not rest with him. The Organising Committee for the Washington Conference, which had been set up, included women in its staff, and its work in this country was now on the point of completion. Further appointments would be made after the Washington Conference by the director of the International Labour Office, when he had been appointed. In view of the fact that Sir Eric Drummond had been appointed Secretary-General to the League of Nations, there was not much likelihood that the director would be British. But whoever he might be, it was open to the deputation to suggest the names of qualified women, which he (Mr. Barnes) would submit to the director of the International Labour Office, when appointed. The number of such names should be limited, and it was essential that only fully-qualified women, able to speak French as well as English, should be suggested.

Miss VARLEY, of the Women's Industrial League, undertook to submit the names of fully qualified women.

ORGANISED WOMEN AND THE LEAGUE OF NATIONS.

THE Covenant of the League has been offered to the nations as a kind of framework on which they can build the future of the world. The fact that the principle of equal opportunities is recognised in it is one of the greatest victories our cause has ever won. It lies with us to make that victory effective. As Mrs. Rackham said at a great conference of organised women last week, "the Covenant of the League is a challenge to the nations, Article VII. is a challenge to women."

The Conference showed that in this country at any rate, organised women have already accepted the challenge. It represented ninety-five Societies, including the National Union of Societies for Equal Citizenship, the National Council of Women, and the chief women's Labour organisations. The women present belonged to every group and to every shade of political opinion that has found organised expression at all. They were, it is true, all women who, for one reason or another, care about politics. Lady Selborne spoke of the great mass of ordinary women up and down the country who do not belong to any group and whose wants are constantly overlooked by those in power because they are inarticulate. In her concern for these she seemed to feel that no representation of women on the League which left them out could be of any real use. To most of those there, however, it appeared, that in one sense these women cannot be represented, and that, in another, they are represented by those in the organisations. The unorganised have no machinery for representation and it is impossible to express the political opinion of those who are totally uninterested in politics. In that sense, then, Lady Selborne's "ordinary women" cannot be represented. In another sense, it may be said that the women in the organisations are simply types of ordinary women. Few would agree with Lady Selborne's theory that all those present last Thursday were cranks (a title which, she said, she was proud to claim for herself). It rather seemed that it was just their ordinariness that drew them together. They were women belonging to different political parties, to different social groups, and to different occupations all united by the ordinary human desire to have some share in deciding matters which, they now understand, affect their own lives and the lives of their children. The only real difference between the organised and the unorganised women is that the former have realised that what touches all is the concern of all and have begun to act upon this knowledge, and the latter have not.

The League of Nations, with its vast implications for the future of mankind, is certainly one of the things that touches all, and it concerns women as much as men. There could be no doubt of the unanimous feeling of the Conference on that point. Among the vast and complicated subjects with which the League will have to deal, there is not one, no, nor any bit of one, which does not in the long run affect women as well as men. About all of them, the opinion of women should be sought and they should have equal opportunities of representation with men. Organised British women hold this belief and are determined not to rest till it has been translated into practice. So much was evident at the Conference.

But there are some subjects which seem, primarily at least, to concern women more than men. Ought there to be a special machinery for expressing women's opinion on these subjects; ought women to be organised in the League not only with the men, but separately, as women? This is a more debatable question, and although the Conference did not come to any conclusion about it, both points of view were ably expressed. One opinion is that if women set up a special machinery they will appear to be claiming a special privilege and will weaken their claim to be included with the men. The supporters of this theory, among whom are Miss Mary Macarthur, Dr. Marion Phillips, and other Labour women, hold that if women could really succeed in obtaining a double representation, by themselves and with men, they would be gaining a most unfair privilege; but this is not in the least likely to happen; what is much more likely is that the women will be pushed away into their separate organisations, and will occupy only a little corner in the affairs of the League; their claim to share all responsibilities with the men will then be hopeless. In support of the opposite opinion (which is that of the National Union of Societies for Equal Citizenship), it is urged that though the ideal to be sought for is the *equal* representation of women and men in the League, and everywhere else, the present practice is so much the reverse of this ideal that special machinery is still needed in order to redress the balance. Without such machinery, indeed, it is hardly possible to attain the ideal. Women are still so weak politically as compared with men, and their representation for some time to come is certain to be so inadequate, that the few of them who are included with men in the different departments of the League will find it difficult to give weight to their views, unless they are strengthened by a special organisation outside. In the long run, it is true, all human questions concern men as much as women and women as much as men. But men have not realised this, and, in practice, men and women do not feel equal interest in the same questions. Men will not yet admit women's share in the special questions in which they have up till now felt more interest than women; and the questions about which women have up till now felt more interest than men tend to be neglected in practical legislation. The question of military defence, for instance, is one in which men and women are both slow in recognising women's concern; the question of the White Slave Traffic, on the other hand, is one in which women's special interest is recognised, but which will not be dealt with effectively unless women have a special machinery of their own. Just as the Labour movement is everywhere urging its demand for equal representation, and yet feels that a special organisation is necessary in order to enforce its claims against the entrenched interests of those who have hitherto held all the power, so the women's movement believes that a special machinery is necessary in order to enforce its claims in what is still to such a very great extent, a man-made, man-ruled world.

The only other difference of opinion which emerged at the Conference was on the best practical method of proceeding in collecting the names of women suitable for work under the League and in pressing them on the attention of the Government. Agreement was reached on this point, and measures were taken for setting up a provisional Committee to begin the work. This is, of course, most important; it is not enough to press for the inclusion of women, we must find the suitable women and put them forward with zeal. They will be sharing in an immense task; the attainment and preservation of peace without which there can be no happiness, no growth, no continued existence for the human race, and the development of the good life, without which peace itself is merely a negation. The League of Nations is something more than a League to prevent war, it is the beginning of the international polity of the future. It is good to know that women will have a share in building it up from its foundations; the Conference last week was an important step to this end.

EDITORIAL.

FROM SICK-HOUSE TO SCIENCE-HOUSE.

There have been some very pessimistic articles in the Press during the past week on the financial condition of the voluntary hospitals; and, indeed, with the enormous cost of upkeep and labour, very serious consideration of the whole question is imperative. We have no fear that these valuable national institutions will suffer in the long run. The sick must be cared for, and the medical and nursing schools kept up-to-date; but evolution from the sick-house to the science-house is taking place, and must be recognised and organised. In the process, no doubt, co-ordination must be effected, and the care of sick people entrusted only to recognised authority. The present system, by which anyone, no matter how ignorant, may inaugurate and govern hospitals, is wasteful, and must be discontinued. Let the Ministry of Health consider the matter, call to its aid the best social, medical, and nursing expert opinion possible, and then deal firmly with the situation. The matter is too serious for further drifting and delay.

THE REPRESENTATION OF WOMEN ON THE LEAGUE OF NATIONS.

The blessed month of August with no meetings has passed; in September we begin to talk again and at the Conference of women's organisations to consider the representation of Women in the League of Nations, held at the Caxton Hall, Westminster, on Thursday, September 4th, the talk was very good.

It is provided in the Covenant of the League that all positions connected with the League, including the Secretariat, shall be open equally to men and women, and the women's organizations propose to submit to the Government a list of suitable candidates for appointment upon the various bodies.

Mrs. Rackham presided. She said that their object was to put into effective action the words contained in the League of Nations Covenant. As the vagueness of the League of Nations proposals was a challenge to the democracy of the world, so were those words in Article 7 of the Covenant a challenge to women. They desired to make these words effective by selecting women who were most capable of service.

Resolutions urging upon the Government the just demand for representation of women in the Assembly of Delegates, in the International Court of Justice, and in all commissions and other bodies set up in connection with the League, were submitted and passed.

Various schemes for the nomination and recommendation of women representatives were discussed, and a resolution, proposed by Miss M. Macarthur, was ultimately carried to the effect that measures be taken, by a provisional committee, to receive from the organisations forming the Conference, and consider, and, if necessary, to recommend from, nominations of women to be submitted to the British Government and the League Secretariat as suitable for appointment on the various bodies or in the capacities for which the Government or the Secretariat are responsible. The recommendations will be submitted to a further meeting of the Conference.

The proposal to set up in connection with the League of Nations, machinery for a permanent International Women's Office, with status similar to the International Labour Office, was left undecided. The previous question was moved and agreed, and it was decided, upon the suggestion of Mrs. Ogilvie Gordon, that should the Secretariat of the League propose to establish a Women's Bureau, the draft scheme should be submitted to National Committees of Women, and that the views and recommendations of these bodies should be considered before any such bureau be constituted and given authority.

There should be no difficulty in suggesting names of women well fitted to take part in the International Work of the League of Nations when it is formed.

In the meanwhile, President Wilson is touring the United States in a special train in support of the Covenant of the League, and his opponents in the Senate are "camping on his trail."

WOMEN AND "THE LEAGUE."

MASS MEETING AT ALBERT HALL.

Following upon the issue of the women's manifesto in support of the League of Nations, a mass meeting of women, under the auspices of the League of Nations Union, will take place at the Albert Hall on February 6.

The speakers will be Lady Astor, M.P., Miss Maude Royden, Miss Mary Macarthur, and Lord Robert Cecil; Mrs. Randall Davidson (wife of the Primate) will take the chair.

"Times" 14. 1. 20.

WOMEN AND THE LEAGUE.

A meeting of women, under the auspices of the League of Nations Union, will take place at the Albert Hall on February 6, at 8 p.m. Admission is free, and the doors will open at 7 p.m. The speakers will be Lady Astor, M.P., Miss Maude Royden, Miss Mary Macarthur, and Lord Robert Cecil. Mrs Randall Davidson (wife of the Primate) will take the chair. Tickets for admission may be obtained in advance on application to the League of Nations Union, 22, Buckingham-gate.

Glasgow Herald 17. 1. 20.

Now that it has actually come into being, the League of Nations Union is making strenuous efforts to rouse the interest of women and make them realise their great responsibility in connection with the League. A special Women's Section has been started under Mrs Croxton, who organised the entertainment scheme for the Women's Services. Interviewed at the headquarters of the Union in Buckingham Gate, Mrs Croxton was full of enthusiasm for her new work. "As you know," she said, "we have just issued a manifesto, signed by public-spirited women of all parties and of no party. We intend to have a great campaign all over the country, and the inaugural meeting will be held at the Albert Hall on February 6. Mrs Randall Davidson will take the chair, and the speakers will include Lady Astor, Miss Maude Royden, Miss Mary Macarthur, and Lord Robert Cecil. The various societies, such as the Women Citizen's Association, Women's Institutes, etc., are all helping; and we are also doing our best to get the schools and colleges interested. Women teachers predominate, and if the League continues as a permanent organisation it will be their duty to educate the children as to its objects and use."

League of Nations Union

Pall Mall Gazette 31. 1. 20

The Talk of the Town — The League of Nations.

It is hoped that a great many women will attend the great League of Nations Union meeting on February 6 to hear Lady Astor, M.P., Miss Maud Royden, and Miss Mary Macarthur speak. Mrs. Randall Davidson is to take the chair, and we shall, I expect, be told how we are to influence public opinion. Certainly the three speakers are experts on this subject.

Daily Sketch 2. 2. 20

Women's Mass Meeting.—Women are going to have a mass meeting at the Albert Hall—a thing which I don't think has happened since "Suffrage Days." It is in support of the League of Nations, and is to be on February 6. Mrs. Randall Davidson will be in the chair, and the speakers will be Lady Astor, M.P., Miss Maude Royden, Miss Mary Macarthur and Lord Robert Cecil.

Morning Post 2. 2. 20.

Mrs. Randall Davidson will preside at a mass meeting for women in support of the League of Nations at the Royal Albert Hall on Friday next at eight o'clock. The speakers will include Viscountess Astor, M.P., Miss Maude Royden, Miss Mary Macarthur, and Lord Robert Cecil, M.P.

Dundee Courier 31. 1. 20.

In support of the League of Nations a mass meeting for women will be held at the Royal Albert Hall on Friday, Feb. 6, at 8 p.m. Mrs. Randall Davidson will preside, and the speakers will include Lady Astor, M.P., Miss Maude Royden, Miss Mary Macarthur, and Lord Robert Cecil, M.P.

LEAGUE OF NATIONS RALLY.

There is to be a great meeting of women at the Albert Hall this week in support of the League of Nations. Among those who are to take a prominent part in the proceedings are Lady Astor, M.P., Miss Maude Royden, Miss Mary Macarthur, Mrs Randall Davidson, and Lord Robert Cecil.

Daily News 7. 2. 20.

WOMEN & WORLD PEACE.

12,000 VOTE FOR THE LEAGUE OF NATIONS.

KING'S MESSAGE.

STIRRING SPEECHES AT ALBERT HALL.

Twelve thousand women crowded the Albert Hall last night and enthusiastically and unanimously supported a resolution declaring the League of Nations to be essential to the peace of the world. So great was the crush that two overflow meetings had to be arranged, one in the open-air outside and the second at the Imperial Institute.

Miss Maude Royden

Mrs. Randall Davidson presided at the Albert Hall meeting, and was supported by Princess Helena Victoria, Lord Robert Cecil, the Archbishop of Canterbury, Viscountess Astor, M.P., Viscount and Viscountess Gladstone, Miss Maude Royden, Miss Mary Macarthur, Mrs. W. A. Cadbury (Lady Mayoress of Birmingham), Lady Islington, and others.

The following telegram from the King and Queen was read amid loud cheers:

> The King and Queen have received with much gratification the message you have addressed to their Majesties. . . . Mindful of all that womanhood has sacrificed, endured, and achieved in these years of war, their Majesties feel with you that British idealism can have no more noble aim than to secure to the world enduring peace.

THE SHADOW OF WAR.

Miss Mary Macarthur put the first resolution: "That this meeting regards the League of Nations as essential to the peace of the world." "We are still living in the shadow of war," she said. "The peace that preceded the war was no peace, and at present we are living in the shadow of the horor which has just ended. What man or woman with a heart to feel can look on Central Europe unmoved? We have dreamed dreams of the New World—free from war, and based upon justice between man and man. We realise that it will not be built in a day, and that we must go to war again, this time against greed, envy, fear, and hatred, the foes of all mankind. All mankind must unite, not some nations against some other nations, for the sake of a fetish, called the Balance of Power."

Lady Astor, M.P., in seconding the resolution, begged her audience to trust America. "I believe America has started," she said. "The League may be too ambitious, and reservations necessary, but remember there are twenty million people in America already urging the Senate to sign the Covenant, with or without reservations. Lord Grey's letter has done more to alter the situation for the better than any event in the last few months. I repeat, we must trust America, and I am certain she will not be long before she too comes into the League."

MISS ROYDEN'S STIRRING APPEAL.

Miss Maude Royden put the following resolution:—"That this meeting pledges itself to support the League of Nations Union by every means in its power." She received a wonderful reception upon rising to speak, and carried the great audience completely with her.

"Women have learned from the war," she said, "not that some things are impossible, but that they are intolerable. (Applause.) It is time for the women of the world to refuse to hear that some things are impossible. The League may be imperfect, but it offers an alternative to war. Not again shall the world be plunged into hell in four days, as it was in 1914."

She then addressed specially those who felt that the League as it now is is merely the offspring of an unjust peace, drawn up by statesmen whom the women do not trust. "But it contains within itself the power to revise," she said. "Are you going to take hold of it and make of it the thing of which you dreamed? Revise it; do not let it be your fault that when sanity returns there is no channel for the awakening pity of the world.

"The springs of pity are opening with the spring of the earth. Bradford, to its immortal honour, has been the first to offer its hospitality to one thousand of the children of those who were once our foes.

"The world has bought this hope of the League at such an awful price of suffering. If you withdraw your help now, because it is not the League of your dreams, how will you re-create the hope of a world which you have taught to despair?"

"WAR CRIMES" PRISONERS.

Lord Robert Cecil also delivered an impressive speech. He said the outlook for peace was still dark. We were rightly anxious to see those who ill-treated our prisoners in Germany punished. "There is no meaner or more despicable crime," he proceeded, "than to ill-treat men who are absolutely defenceless. That does not mean that a wholesale demand for the surrender of generals and statesmen and princes, if it be really true that such a demand has been made, is right. I shall not believe this story until we are assured officially that it is true.

"But if we were indignant over the sufferings of our prisoners, are we to close our eyes and steel our hearts against those terrible stories from Russia? Remember, these things are said to have happened under Allied Government. I don't say we are responsible for them, far from it. I do not know how far they are responsible themselves. But if it be the case—as I am sure it is—that thousands and tens of thousands have perished and many more have gone mad, surely we should do what we can to help save the rest." (Cheers.)

Lord Robert proceeded to pay a very warm tribute to the great service Lord Grey had rendered to the League of Nations by his recent letter, which had given rise to new hope. They welcomed his intervention and ventured to say to him that our country, our Empire, nay, the whole world, could not afford to lose again his help and guidance. (Applause.) In the dark situation which he had depicted the one hope was in the League of Nations. It must be made a reality. Above all, they were anxious for the first steps towards disarmament.

Dundee Courier 6. 2. 20

MEN AND WOMEN OF TO-DAY.

This is the day of the great gathering of women at the Albert Hall, London, in support of the League of Nations, and the portrait you see above is that of Mrs Arthur Croxton, who is organising the mass meeting. Among those who are to be taking a prominent part in the proceedings are Lady Astor, M.P., Miss Maude Royden—who, you will remember, gave an interesting address in Dundee quite recently—Miss Mary Macarthur, Mrs Randall Davidson, and Lord Robert Cecil.

WOMEN OF ENGLAND
AND THE
LEAGUE OF NATIONS.

LORD R. CECIL AND RUSSIA.

At a crowded meeting of women held in the Albert Hall last night, under the auspices of the Women's Section of the League of Nations Union, an inspiring message from the King and Queen (given in another column) was read in reply to one forwarded by Mrs. Randall Davidson, who presided. It was announced that telegrams had been received from Mrs. Humphry Ward and Mrs. Fawcett regretting inability to attend on account of illness. At an overflow meeting, held in the Jehangir Hall, Imperial Institute-road, Mrs. Ogilvie Gordon (president, National Council of Women) occupied the chair. Both meetings were addressed by Viscountess Astor, M.P., Lord Robert Cecil, M.P., Miss Maude Royden, and Miss Mary Macarthur. The following resolutions were passed unanimously:

That this meeting regards the League of Nations as essential to the peace of the world.

That this meeting pledges itself to support the League of Nations Union by every means in its power.

Mrs. Davidson, in her address from the chair, said that they were there to further the cause of the League of Nations—a great cause, which could only succeed if it was the outcome of the fervent and determined purpose of all of them throughout the whole land. It was not the purpose of statesmen only. It must be everyone's purpose if it was to prevail—the people's purpose, the people's will. That purpose was not merely the stopping of great wars, not merely the resolve, vital as it was, that there should be no "next time." It was that by the common effort of all people "righteousness" should prevail, both between the nations and within the nation's life. If that purpose were carried to its utmost end it would make them able to bear better the terribleness of this most terrible war and its after-effects. It would make even the sacrifice of their best and dearest to have been worth while. (Hear, hear.) The dear lives laid down would then have won a greater victory for the world than most of them had dared to dream. (Hear, hear.)

AMERICA'S RESERVATIONS.

Viscountess Astor said women knew what war meant, and so they were overwhelmingly behind the League of Nations, because it was a sincere and practical effort to correct the causes which lead to war. The real cause of war lay in the hearts of individuals. But while they were all agreed on the ends which they were pursuing through the League of Nations, she did not think they were equally clear about the means. Half the misunderstanding in our own private worlds was caused by letters or messages or reports through third persons. And that was equally true of the great world of affairs. Nations got distorted ideas of each other, and then made the trouble worse by despatches and all the complications of diplomatic intercourse. "You know the old game," said her ladyship, "where you start whispering a sentence at one end of the row and compare it with the original when it reaches the other end? Well, diplomatic negotiations are often rather like that." The League of Nations set up a system by which the responsible Ministers of the different nations met round a table and discussed any difficulties and differences they might have to face. Women were practical people, and she was sure they could all see the good sense of that. When they talked about the League of Nations, let them, therefore, always keep that very simple and practical idea before them. They should realise that Rome was not built in a day, and not despair if the League of Nations did not stop all wars at once. Let them not be plunged in despair because the United States made reservations regarding some articles in the Covenant. Reservations did not matter so much, provided the United States would make a start. Personally, she considered there was a great deal of sense in the reservations made by the American Senate. When a boy started high-jumping, he did not begin by trying to clear 6ft. He put the bar at 3ft, and put it up by inches till he failed and knocked it down. Then he practised hard at the point where he had failed, and after a time he managed to jump a few inches more. That was the way in which she believed the League of Nations ought to start. "Don't expect to clear the moon in your first jump," she added. "Begin with the footstool, and then go on to the sofa, and you may be able to clear the moon in due course." (Cheers.) She thought Lord Grey's letter had done more to alter the situation for good than any single event in the last few months. (Hear, hear.) She believed it was only by facing things in that spirit that we should get through these difficulties successfully. (Hear, hear.) She was very glad indeed to know what a warm reception Lord Grey's sympathetic and courageous statement was met with in America. She thought, however, that it was still going to take all the patience and open-mindedness on both sides of the Atlantic to withstand the powerful propaganda which seemed to be going on to separate us. They had to realise that the League of Nations was ultimately a spiritual matter, and that war would never be abolished until the seeds of war had been rooted out of our hearts and the seed of the Kingdom of Heaven planted there instead. Women, who had such an overwhelming responsibility for the coming generation, must see that they threw their whole weight into the task of meeting suspicion and jealousy and hate, not with their own weapons of force and bitterness, but with the invincible weapon of goodwill, beginning with goodwill in our relations with individuals. (Cheers.)

NEED FOR COMBINATION.

Lord Robert Cecil said we lived in a democratic country—a country in which the ultimate sovereignty rested with the electorate. In the last resort Governments could only carry out the policy which the electors approved. It was their business to see that the electors approved the League of Nations, not merely passively, but actively. For that combination was essential. Single, they could do little or nothing to influence the Government of the country; combined together they might do much. That was the reason for the existence of the League of Nations Union. (Cheers.) They wanted the League of Nations because the League of Nations was essential to the peace of the world. Last June he attended a great meeting in that hall in support of the League, under the chairmanship of their president, Lord Grey. They urged then that the League was necessary; it was far more necessary now. (Hear, hear.) The outlook for peace was not less dark than it was then. The terrible consequences of war were still in operation. Everywhere one saw measureless suspicion—the new States scarcely on their feet; the old States sore and resentful; charges and counter-charges of ambitions and aggressions; and on the top of all, vast numbers of the populations grossly underfed, or even starving. The pitiful cry of the children of Poland, of Bohemia, and of Austria, was still in their ears. Terrible epidemics were raging in Central Europe and in Russia, carrying off the weakest and most innocent of the population, slaughtering the prisoners and the captives.

PRISONERS' SAD PLIGHT.

The sufferings of the prisoners in Russia had been terrible. He feared that tens, and perhaps hundreds of thousands of them had perished from disease and starvation. They were anxious, and he thought rightly anxious, to see those who ill-treated our prisoners in Germany punished. (Hear, hear.) There was no meaner nor more despicable crime than to ill-treat men who were absolutely defenceless. (Hear, hear.) That did not mean that a wholesale demand for the surrender of generals and statesman and princes—if it were really true that such a demand had been made—was right. He should not believe this story until assured officially that it was true. But if we were indignant over the sufferings of our prisoners, were we to close our eyes and steel our hearts against those terrible stories from Russia? They should remember that these things were said to have happened under Allied government. He did not say we were responsible for them—far from it. "I do not know how far they are responsible themselves," he added. "But if it be the case—as I am sure it is—that thousands and tens of thousands have perished, and many more have gone mad, surely we should do what we can to help to save the rest!" (Hear, hear.)

One bright spark in the international horizon had appeared quite recently. In spite of the efforts of mischief-makers on both sides of the Atlantic, the last few days had given better hopes, and it was a gratification to the League of Nations Union to know that it was due to the letter of their President that these hopes had arisen. (Cheers.) Whatever help and support any one of them, or all together, could give to his efforts would be heartily given. They welcomed his intervention and ventured to say to him that our country, our Empire, nay, the whole world, could not afford to lose again his help and guidance. (Cheers.) They trusted he would leave his northern seclusion and come amongst them again, for there was much to be done. (Cheers.)

THE ONE HOPE.

In the dark situation which he had ventured to depict their one hope was in the League. It must be made a reality. Its organs must become living organs. That was why they asked that the Assembly, that great consultation of all the States in the world, should be summoned without delay. That was why they hoped that the other machinery of the League might quickly be put in order. They wanted the court of justice to begin its work. They wanted the mandates allotted and defined. Above all, they were anxious for the first steps towards disarmament. (Cheers.) At present they heard a great deal of rattling of the sabre on the Continent: They were told that the American fleet was being increased and that the military forces of our country were being reorganised. All these things might be necessary, but they could not be called encouraging to the lovers of peace, for without some measure of general disarmament they could feel no real security for peace. (Hear, hear.) The old days, when we could comfort ourselves with the belief that if we wanted peace we should prepare for war, were gone for ever. They had been shattered by the high explosives of the late war. Therefore they wanted the disarmament provisions of the Covenant put in force without delay. (Cheers.)

There were many questions which awaited consideration. The Executive Committee of the union had summarised the immediate steps that they thought should be taken about the Russian danger and the economic chaos in Europe. He had a picture in his mind of how the Council might proceed. He could see a special meeting of the Council of the League, attended by the chief Ministers of all the States which composed it. One chair would be unhappily vacant, but that only called for greater exertion and devotion on the part of the rest of the Council. Would it not be a great thing to read of the British representative coming down to that Council and making a great speech, not to his own countrymen only, but to all the world, calling their attention to the vast problems that awaited settlement, and urging them to abandon sectional and national prejudices and interests and join in a great effort to save humanity? (Hear, hear.) He would point to the starving peoples of Europe, the passions of hatred that afflicted us, and all the other legacies of war, and he would ask the assembled statesmen to put aside their desires for vengeance or for reparation, territorial aggrandisement, or commercial advantage, and, treating themselves as members of a great world assembly, to work for the re-establishment of the prosperity of mankind, and of that confidence between man and man without which prosperity cannot exist. He heard the day before someone quoting the old description of Europe as a number of wicked old gentlemen covered with decorations. It might be so; but he doubted if there were any of them so wicked or so strangled with decorations that they would not respond to such an appeal as that. In any case, let them try it, for there was nothing else to be tried. If that failed, the outlook was dark indeed; but he did not believe it would fail—not, at any rate, if it was supported by the determination of the peoples of the world. (Cheers.)

Miss Mary Macarthur said it was not so very long ago that people could be found who were prepared to defend war, but at any rate for the time being there was no one who upheld that point of view. They had seen enough to realise that there were things even more precious than life which might be destroyed by war. They had realised that it was not only the body which was destroyed by war, but that it affected the soul of man as well.

Miss Maude Royden remarked that her belief was that what women had learned from war was not that some things were impossible, but that some things were intolerable—(cheers)—and that the state of the world during the last five years and at the present moment of so-called peace was one of the things that were intolerable. The real soul of the League of Nations was a request that nations should be given an alternative to war. (Cheers.) Not again should the world be plunged into hell in four days, as it was in 1914. (Hear, hear.)

Among those who accepted invitations to be present were:

Princess Helena Victoria, the American Ambassador and Mrs. Davis, Archbishop of Canterbury, Mrs. W. A. Cadbury (Lady Mayoress of Birmingham), Mrs. Creighton, Lady Sykes, Dr. Jane Walker, Dame Sarah Swift, Viscount Astor, Miss Mary Crowdy, the High Commissioner for Canada, Miss Damer Dawson, Miss Beadsmore, Smith, Dame, Sidney Browne, Miss Rosamond Smith, Mrs. Ross, Miss Conway, Miss Major, the Hon. Lady Norman, Lord Emmott, Major-General John Davidson, Lord Shaw of Dunfermline, Mr. C. Barrie, M.P., Colonel J. W. Greig, M.P., Sir Ernest Pollock (Solicitor-General), Lady Islington, Sir Arthur Boscawen, Mr. H. B. Betterton, M.P., Major the Hon. Edward Wood, M.P., Col. W. T. Care, M.P., Dame Edith Lyttelton, Mr. R. Armitage, M.P., Lady Bective, Lady Cooper (Lady Mayoress of London), Viscountess Rhondda, Miss Eleanor Rathbone, Lady Moore, Dame Florence Leach, Miss Dorothy Evans, Mrs. Percy Bigland, Mrs. Stuart-Wortley, Lady Perley, Dame Maud McCarthy, Miss Adelaide Anderson, Mrs. Meynell, Miss Margaret Jones, Mrs. Atholl Stewart, Miss Young, Miss Rita Oldham, Mrs. Croxton, Colonel Hore Ruthven, V.C., Lieut.-Colonel G. Dalrymple White, M.P., Mr. C. A. McCurdy, M.P., Captain Benn, M.P., Mr. J. M. Hogge, M.P., Lieut.-Colonel N. Raw, M.P., Earl of Lytton, Mr. A. E. Morning Post. 7.2.20

Message From the King and Queen.

"The King and Queen have received with much gratification the message you have addressed to their Majesties on the occasion of the mass meeting representing the women of England assembled in furtherance of the movement for the League of Nations. Mindful of all that womanhood has sacrificed, endured, and achieved in these years of war, their Majesties feel with you that British idealism can have no more noble aim than that of securing to the world enduring peace."

This message, sent to a crowded meeting of women in the Albert Hall last night, was greeted with prolonged cheers when it had been read by Lord Robert Cecil. The object of the gathering, over which Mrs. Randall Davidson presided, was to support the League of Nations.

Viscountess Astor said: "I am perfectly certain that America will come into the League of Nations. I beg of you to go on trusting America—give her a little more time. My heart aches and my ire rises when I hear some criticisms of America and her people because they are really a misrepresentation of American views."

Lord Robert Cecil, having referred to the inspiring message received from the King and Queen, urged that if those present were sincere in support of the League of Nations they must join the Union under which that meeting was held. The League must be made a reality. Its organs must become living organs. Women were no longer voiceless and voteless; they had become full citizens of the Empire, with an influence as great as that of their male fellow-citizens. They could no longer stand aside, even if they wished to do so. The cause of peace must appeal to women even more than to men, and they must take care lest future generations might say that in the first great call to the enfranchised women they failed to do their duty.

Miss Mary Macarthur and Miss Maude Royden were also among the speakers.

Times. 7.2.20

"TRUST AMERICA!"

LADY ASTOR ON LORD GREY'S LETTER.

The meeting of the Council of the League of Nations at St. James's Palace has been fixed for next Wednesday.

The Albert Hall was crowded to overflowing last night on the occasion of a mass meeting of women in support of the League of Nations. So great was the demand for admission that two overflow meetings were held, one outside the hall and the second at the Imperial Institute.

Mrs. Randall Davidson presided at the Albert Hall, and among those on the platform were Princess Helena Victoria, Lord Robert Cecil, the Archbishop of Canterbury, Lady Astor, M.P., Lord and Lady Gladstone, Miss Maude Royden, Miss Mary Macarthur, Mrs. W. A. Cadbury (Lady Mayoress of Birmingham), and Lady Islington.

The following telegram from the King and Queen at Sandringham, addressed to Mrs. Davidson, was read amid loud cheers:—

The King and Queen have received with much gratification the message you have addressed to their Majesties on the occasion of the mass meeting representing the women of England assembled in furtherance of the movement for the League of Nations. Mindful of all that womanhood has sacrificed, endured, and achieved in these years of war, their Majesties feel with you that British idealism can have no more noble aim than to secure to the world enduring peace.—Private Secretary.

Lord Robert Cecil said that the terrible consequences of the war were still in operation, and the League was needed far more than it was last year.

"One bright spark on the international horizon has appeared quite recently. In spite of mischief-makers on both sides of the Atlantic, the last few days have given us better hopes, and it is a gratification to the League of Nations Union to know that it is due to the letter of their president that these hopes have arisen. Whatever help and support any one of us, or all together, can give to his efforts will be heartily given. We welcome his intervention, as we venture to say to him that our country, our Empire, nay the whole world, cannot afford to lose again his help and guidance." (Cheers.)

Lady Astor said she thought that Lord Grey's letter had done more to alter the situation for good than any single event in the last few months. It was only by facing things in that spirit that we should get through the difficulties successfully. It was still going to take all the patience and open-mindedness on both sides of the Atlantic to withstand the powerful propaganda which seemed to be going on to separate us. She believed that as the desperate facts came home to the people of America they would realize that the desire of the Allies for their cooperation was a genuine one without ulterior imperialistic motives. "Trust America," added Lady Astor, "I am perfectly certain that America will come into the League of Nations."

Daily Sketch 7.2.20

WORLD-WIDE PEACE.

The King and Queen's Message to Women's Mass Meeting.

AIM OF BRITISH IDEALISM.

There were remarkable scenes of enthusiasm at the Royal Albert Hall last night on the occasion of a mass meeting for women in support of the League of Nations.

The vast building, accommodating 10,000 persons, was packed an hour before the advertised time of commencement, and so great was the demand for admission that two overflow meetings were arranged.

Mrs. Randall Davidson presided at the Albert Hall, supported by Princess Helena Victoria, Lord Robert Cecil, the Archbishop of Canterbury, Viscountess Astor, M.P., Viscount and Viscountess Gladstone, Miss Maude Royden, Miss Mary Macarthur, Mrs. W. A. Cadbury (Lady Mayoress of Birmingham), Lady Islington and others.

Women's War Sacrifice.

The following telegram from the King and Queen was read:—

Mindful of all that womanhood has sacrificed, endured and achieved in these years of war, their Majesties feel with you that British idealism can have no more noble aim than to secure to the world enduring peace.

Lord Robert Cecil said that at present they heard a great deal about the rattling of the sabre on the Continent. They were told that the American fleet was being increased, and they read that the military forces of this country were being reorganised. All these things might be necessary, but without some measure of general disarmament we could feel no security for peace.

America Will Come In!

Lady Astor said she thought it was still going to take all the patience and open-mindedness on both sides of the Atlantic to withstand the powerful propaganda which seemed to be going on to separate Britain and the United States. She believed that as the desperate effects came home to the people of America they would realise that the desire of the Allies for their co-operation was a genuine one without ulterior imperialistic motives.

"I am perfectly certain," she added, "that America will come into the League of Nations."

The meeting unanimously carried resolutions declaring the League of Nations to be essential to the peace of the world, and pledging those present to support the League of Nations Union by every means in their power.

Yorkshire Post 23.2.20.

"A WOMAN'S POINT OF VIEW."

Sir,—May I make a few comments on the article in to-day's "Yorkshire Post"—"A Woman's Point of View"?

The writer complains of the futility of public meetings, and pours scorn upon women's meetings. She must surely be aware that meetings are convened for various purposes; the two meetings particularly referred to were undoubtedly organised for the purpose of spreading information and thereby educating public opinion. At the League of Nations meeting Lord Robert Cecil invited those who believe in the League to join the League of Nations Union, and help to establish branches wherever possible; that was surely giving the people something definite to do. Perhaps this is not a sufficiently novel way of helping a new movement to attract the majority of men and women, but as the League of Nations is a political instrument, it is only by educating public opinion in the uses and possibilities of the League that individuals can be of use. In an article in the "Woman's Leader," Lord Robert says of women's part of the work, "Let them throw themselves into the national campaign for the League. Let them bring to the help of the League of Nations Union their money, and their service, their matchless powers of organisation and devotion."

With regard to the meeting on the "Need of Women in Parliament," it is true that the need for them there has been established in the minds of some women and some men, but there are still many women and men to whom the idea is both startling and repugnant. There is need for a great deal of propaganda on this subject, and the only scheme that will help women into Parliament is the education of the electorate, men as well as women, for in spite of the preponderance of women in the country, the great majority of electors are men. This means steady hammering at the same topic until prejudice and opposition are worn away. It is most unsensational work, but it is the only way. Women have to find their way into Parliament by the same road as men; no other scheme, however well devised, will get them there. The meeting which your contributor considers futile was part of this educational campaign, and had the backing of the two largest non-party women's organisations in the country; moreover, there are being formed in all parts of the country women citizen's associations whose object is to educate the woman voter in her duties and responsibilies as a citizen. The writer of the article does not appear to be aware of these organisations.

The Sex Disqualification (Removal) Act does not "transform our lives" quite as much as your contributor seems to think. It is a very poor substitute for the Labour party's Women's Emancipation Bill, which would have removed practically all the legal disabilities as between men and women. However, we have learnt to be thankful for small mercies, and half a loaf is better than no bread.—Yours, etc.,

HON. SECRETARY,
Ilkley Society for Equal Citizenship.
February 20, 1920.

Progress of the League of Nations

In the historic atmosphere of the Picture Gallery of St James's Place, the League of Nations Council will on Wednesday, Thursday, and Friday of this week hold its second meeting, with Mr Balfour as British representative, and with representatives of France, Italy, Belgium, Greece, Japan Spain, and Brazil. Among the sumjects on the agenda are the duties which fall to the League under the Peace Treaty in relation to the Saar Valley and Dantzig and also the establishment of an international court of justice. The discussions and decisions in such supremely important and practical matters will be sufficient in the meantime to emphasise the reality of the League. But, over and above this, there are signs that the vital nature and indeed the inevitableness of the League are every day coming to be more widely recognised. The ton of het French press, for example, indicates that the utter hopelessnes of obsolete associations of militant or distrustful Chauvinisms as a permanent protection or as a remedy for the after-effects of war is beginning to dawn upon the French mind. As for our own country, no better testimony to the claimant need for an all-powerful international guarantee against war could be imagined than the mass meeting of women held in support of the League at the Albert Hall in London last Friday. The "platform" included a royal Princess and women of the most "advanced" opinions; every class and every shade of belief and opinion were represented in the vast audience that carried by acclamation a resolution moved by Mirr Mary Macarthur and seconded by Viscountess Astor. It is to women that the real horror and crime of war have been most tragically brought home, and British women have evidently made up their minds that—in the words of the message sent to the meeting by the King and Queen—"British idealism can have no more noble aim than to secure to the world enduring peace." Idealism, too, is being heavily backed by sheer economic pressure. It is to the League that Europe will ultimately turn for a solution of such problems as those represented by the present sate of the exchanges. And, except in the formation of an international court of justice under the ægis of the League, it is not very easy to see any way out of the difficulties that beset a belated execution of the clauses in the Peace Treaty regarding the trial of war criminals.

BRITISH WOMEN AND THE LEAGUE OF NATIONS.

Special to the "Sunday School Chronicle."

Twelve thousand women took part in a remarkable demonstration at the Albert Hall and the Imperial Institute, London, on Friday evening last. The object of these huge gatherings was to prove to the world that the educated women of England had a great faith in the League of Nations, that they regarded the League as essential to international peace, and that they were prepared to make sacrifices in support of the ideals for which it stood. It was a most interesting assembly. Royalty and ladies of high social rank mingled with members of the aristocracy of service. Statesmen and diplomats, including the American Ambassador, were there also, but they took a secondary position. Over eighty societies and organisations were allotted seats in the Albert Hall, most of them women's societies. It was undoubtedly one of the most inspiring meetings I have attended for a long time. The speeches were uplifting and helpful, and one had a foretaste of the real contribution which the thoughtful women of England will make to the progress of the world of to-morrow.

A Great Adventure.

Mrs. Randall Davidson, who presided over the Albert Hall meeting, reminded the audience that the League of Nations could only succeed if it was the outcome of the fervent and determined purpose of everyone. It could not be done by statesmen alone. That purpose was not merely the stopping of great wars, not merely the resolve, vital as it was, that there should be no "next time." It was that by the common effort of all people righteousness should prevail both between the nations and within the nations' life. "But let us not forget," she added, "that no League of Nations can have life unless it is founded on a clear vision of one great fact—the Love of God—which finds its expression in the words 'Our Father,' and recognising the people of the world as one family. If we took up the League as a great adventure, in the power of God, it would become a lasting force for the whole world's good."

Who Defends War to-Day?

Miss Mary Macarthur reminded the meeting that it was not so very long ago that people could be found who were prepared to defend war for its own sake. She quoted an amazing statement from a leading London daily, written just before the outbreak of the great war: "Peace means greater comfort, greater enjoyment, longer life, less suffering; but if war were ended the world would suffer, human character would deteriorate, and we should become a race of degenerates!" Who, she asked, would now defend that point of view? We had seen enough to realise that there were things even more precious than life which might be destroyed by war. We had seen that war not only destroyed the body, it warped the soul of man. Look at the world to-day, she said. Look at Central Europe. In Vienna 80 per cent. of the children under five were deformed, and children of two or three years had the appearance of shrivelled babies of six months. In some towns there were no children alive under seven years of age.

"We must have a new alliance," said Miss Macarthur a little later, "an alliance of the best in the world against the worst, and this the League of Nations would give us."

How Misunderstandings Occur.

Viscountess Astor made a rousing speech. She affirmed that the reason why women were so overwhelmingly behind the League of Nations was because they knew what war meant, and they saw in the League a sincere and practical effort to correct the causes which led to war. The real causes of war lay in the hearts of individuals. But while they were all agreed on the ends which they were pursuing through the League of Nations, she did not think they were equally clear about the means. Half the misunderstanding in our own private worlds was caused by letters or messages or reports through third persons. And that was equally true of the great world of affairs. Nations got distorted ideas of each other, and then made the trouble worse by despatches and all the complications of diplomatic intercourse. "You know the old game," said Lady Astor, "where you start whispering a sentence at one end of the row and compare it with the original when it reaches the other end? Well, diplomatic negotiations are often rather like that." The League of Nations set up a system by which the responsible Ministers of the different nations met round a table and discussed any difficulties and differences they might have to face.

But, added the speaker, they had to realise that the League of Nations was ultimately a spiritual matter, and that war would never be abolished until the seeds of war had been rooted out of our hearts and the seed of the Kingdom of Heaven planted there instead. Women, who had such an overwhelming responsibility for the coming generation, must see that they threw their whole weight into the task of meeting suspicion and jealousy and hate, not with their own weapons of force and bitterness, but with the invincible weapon of goodwill, beginning with goodwill in our relations with individuals.

Lord Robert Cecil's Hope of the League.

Lord Robert Cecil, who did so much to infuse the true British spirit into the Covenant of the League, made a statesmanlike speech. The League, he declared, was absolutely necessary to the peace of the world. Everywhere one saw measureless suspicion; new States scarcely on their feet; old States sore and resentful; charges and counter-charges of ambitions and aggressions; and on top of all vast numbers of the populations grossly underfed or even starving.

In the dark situation which he had ventured to depict their one hope was in the League. But it must be made a reality. Its organs must become living organs. That was why they asked that that Assembly, that great consultation of all the States in the world, should be summoned without delay. That was why they hoped that the other machinery of the League might quickly be put in order. They wanted the court of justice to begin its work. They wanted the mandates allotted and defined. The old days, when we could comfort ourselves with the belief that if we wanted peace we should prepare for war, were gone for ever. They had been shattered by the high explosives of the late war. Therefore they wanted the disarmament provisions of the Covenant put in force without delay.

The League in Action.

There were many questions which awaited consideration. The Executive Committee of the Union had summarised the immediate steps that they thought should be taken about the Russian danger and the economic chaos in Europe. He had a picture in his mind of how the Council might proceed. He could see a special meeting of the Council of the League, attended by the chief Ministers of all the States which composed it. Would it not be a great thing to read of the British representative coming down to that Council and making a great speech, not to his own countrymen only, but to all the world, calling their attention to the vast problems that awaited settlement, and urging them to abandon sectional and national prejudices and interests and join in a great effort to save humanity? He would point to the starving peoples of Europe, the passions of hatred that afflicted us, and all the other legacies of war, and he would ask the assembled statesmen to put aside their desires for vengeance or for reparation, territorial aggrandisement, or commercial advantage, and, treating themselves as members of a great world assembly, to work for the re-establishment of the prosperity of mankind, and of that confidence between man and man without which prosperity cannot exist.

An Alternative to War.

Miss Maude Royden made the final appeal. She reminded the women of England that the world was returning to sanity, instancing as proof of her contention the case of the town of Bradford, which, to its eternal honour, had offered a home, and food, and love to a thousand children of Central Europe. But what, she asked, if, when the whole world had come back to its right mind, there was no machinery by which it could express its altered judgment? Or if the machinery made for a great and good purpose was taken by the enemies of this peace of the world and used for a bad purpose? The real soul of the League of Nations was a request that nations should be given an alternative to war. It was not perfect, but its defects could be mended and it could be made good.

The meeting passed with great enthusiasm two resolutions, the first affirming that the League of Nations was essential to the peace of the world, and the second pledging the audience to support the League of Nations Union by every means in its power.

The following telegram from the King and Queen was read amid loud cheers:—

> The King and Queen have received with much gratification the message you have addressed to their Majesties. . . . Mindful of all that womanhood has sacrificed, endured, and achieved in these years of war, their Majesties feel with you that British idealism can have no more noble aim than to secure to the world enduring peace.

Women's Meeting at Albert Hall.

Although I had heard the Albert Hall was going to be very full for the massed meeting for women last night, organised by the League of Nations Union in support of the League of Nations, I was surprised to find it so packed with people.

Whether enthusiasm for the cause or interest in the celebrities on the platform formed the greater attraction it was hard to say, but those in the audience who were not very sure of the purposes of the League must have become its firm supporters after the clever speeches of Miss Royden and Miss Mary MacArthur. Lady Astor also spoke with her usual charm, but was not so convincing as her fellow-orators.

Lord Robert Cecil's speech, I thought, was all too short, and his remark—"that would be cured by time"—to the girl who complained that young women had no votes, was delightfully apt.

Miss Ellen Terry Deeply Interested.

Miss Ellen Terry was one of the guests in Mrs. Croxton's box. She looked very well, was most interested in the women speakers, and quite enthusiastic in her praise of Miss Royden's wonderful oratory and beautiful voice.

Mrs. Croxton, who had so much to do with the organising of the meeting, must have been pleased with the splendid result of her hard work.

WOMEN AND THE LEAGUE OF NATIONS.

GREAT MEETING AT THE ALBERT HALL.

("British Weekly" Special.)

Eight months have passed since Viscount Grey presided over an Albert Hall demonstration in support of the League of Nations. On Friday evening, in the same hall, the women of London proclaimed their ardent championship of the League. All the best places were occupied, though hundreds had preferred one or other of the overflow gatherings. The speakers moved between the hall itself, the Imperial Institute, and the crowd in the open air. It has been estimated that 18,000 persons were present, and that four-fifths at least were women. In the arena and stalls there was an unusual display of costly furs and expensive millinery, a sure sign that the leisured classes are backing the movement. Wealth will be needed if the League is to carry out its great task of international service. It was good, however, to see a throng of girls who had manifestly come at the close of a working day, and on the platform a large contingent of Salvation Army officers.

"What, no programmes?" was the murmur that buzzed round the hall during the hour of waiting. Leaflets were placed on every chair, women in uniform were selling books and pamphlets, chocolate-vendors moved along the gangway, warning the laggards, "You can't get chocolates after eight;" but by a singular oversight—unique, as far as my experience goes, at the Albert Hall—there was no plan of the meeting, not the scrappiest list of speakers.

As the daughter of one Archbishop of Canterbury and the wife of another, Mrs. Randall Davidson is ideally qualified to preside over an assembly of women. The Archbishop accompanied her to the platform, and was an attentive listener throughout the evening. Mrs. Davidson, in her opening speech, showed that the idea of this League has sprung from the very heart of Christianity. When wars are no more, we shall be nearer the fulfilment of our Lord's petition, "Thy Kingdom come."

A telegram of sympathy from the King and Queen was read amid hearty cheering The following sentence gave evident pleasure: "Mindful of all that womanhood has sacrificed, endured, and achieved in these years of war, their Majesties feel with you that British idealism can have no more noble aim than to secure to the world enduring peace."

Miss Mary McArthur.

Fair-haired Miss Mary McArthur (Mrs. Anderson) rose from her place on Lady Astor's right to move the first resolution, "That this meeting regards the League of Nations as essential to the peace of the world." Miss McArthur has lately returned from America, and she spoke with well justified indignation of wicked attempts in this country to create ill-feeling between the two English-speaking democracies. Her speech was clearly spoken and well delivered, without much help from notes. The grave, deliberate manner, slow enunciation, restrained and quiet gestures, told of long practice in the difficult art of talking to crowds. The Albert Hall echo, let me remark in passing, seemed to be especially troublesome on Friday. To my seat in the middle of the arena, every speech came in grotesque, half-mutilated repetition. Friends in the stalls made the same complaint, "as if the echo approved of militarism and wanted to spoil the peace oratory."

Viscountess Astor, M.P.

Beyond a doubt the chief interest centred in Viscountess Astor. This was apparent, not only from signs among the audience, but from talk on the underground trains, and conversations on Saturday. London is proud of its first woman M.P., and many compliments were paid her. "Such warm humanity," "so delightfully natural," "so clever and witty," were comments I overheard outside the hall. The lady Member was recognisable by all from her portraits in the newspapers. Press gallery pens have described the dainty black costume, white collar, close-fitting black hat, and immaculate white gloves. The small gloved hands were often raised to enforce a merry quip or clinch an argument. Once or twice Lady Astor got a trifle mixed with her notes, and had to turn back. "Trust America," was the watchword of her fine address, and she pleaded for a generous attitude. "I am perfectly sure that America will come into the League. . . . There are twenty million people in America already urging the Senate to sign the covenant, with or without reservations. Lord Grey's letter has done more to alter the situation for the better than any event in the last few months."

Strange as it may seem, I heard neighbours asking, "What letter?" "What Grey is that?" A lady near me was not even aware that a letter had appeared in the *Times*. Allusions to it were doubtfully taken up, and this proves, I think, the mistake of choosing one paper, however great, as a means of communication between statesmen and the people.

The resolution approving of the League was carried with enthusiasm.

Miss Maude Royden.

Miss Maude Royden, whose motion pledged the meeting to support the League, is, in some respects, a consummate orator. She, alone among the speakers, was unprovided with notes, yet there was never a pause in the full-flowing stream of eloquence. Her danger, I should say, lies in the opposite direction. Words and sentences rolling onward in an unchecked, resistless flood are like a newspaper article of five columns, printed as one unbroken paragraph. It might not be a bad thing if this highly-equipped woman preacher would study the sermons of Dr. Alexander Maclaren, and see how he condescended to the weaker brethren and sisters by orderly arrangement, sharp and clear-cut divisions.

Miss Royden's suggestion that the League is the offspring of an unjust peace, "drawn up by statesmen whom the women do not trust," left me cold. We London women have had our opportunity of cheering Clemenceau, Wilson, Lloyd George, Bonar Law and their colleagues. We have not gone back on our admiration and gratitude. If the Allied Nations had refused to trust these men while war was raging, Germany would at this hour be mistress of the world. Miss Royden's speech, as a whole, was admirable. Her allusion to Bradford's offer of hospitality to a thousand Austrian children drew forth a hearty response.

Lord Robert Cecil.

Last June we heard Lord Robert Cecil pronounce the stately manifesto of the League. He has put his heart into this enterprise, and means to carry it to victory. Friday's impromptu speech gripped the meeting by its single-mindedness and transparent honesty. While other Statesmen are occupied with many things, Lord Robert can say "This one thing I do." In the League of Nations he sees humanity's only hope amid the darkness, and he follows the gleam.

Globe - 7. 2. 20

12,000 WOMEN VOTE FOR LEAGUE OF NATIONS.

KING'S MESSAGE.

Enthusiasm was the keynote of a great mass meeting of women last night, held at the Albert Hall, in support of the League of Nations. Twelve thousand people were in the audience.

Mrs. Randall Davidson presided, supported by Princess Helena Victoria, Lord Robert Cecil, the Archbishop of Canterbury, Viscountess Astor, M.P., Viscount and Viscountess Gladstone, Miss Maude Royden, Miss Mary Macarthur, Mrs. W. A. Cadbury (Lady Mayoress of Birmingham), Lady Islington, and others.

THE KING'S WISH.

The following telegram from the King and Queen was read:—

Mindful of all that womanhood has sacrificed, endured, and achieved in these years of war, their Majesties feel with you that British idealism can have no more noble aim than to secure to the world enduring peace.

Lord Robert Cecil said that at present they heard a great deal about the rattling of the sabre on the Continent. They were told that the American Fleet was being increased, and they read that the miltary forces of this country were being reorganised. All these things might be necessary, but without some measure of general disarmament we could feel no security for peace.

Lady Astor said she thought it was still going to take all the patience and open-mindedness on both sides of the Atlantic to withstand the powerful propaganda which seemed to be going on to separate Britain and the United States.

She believed that as the desperate effects came home to the people of America they would ralise that the desire of the Allies for their co-operation was a genuine one, without ulterior imperialistic motives.

"I am perfectly certain," she added, "that America will come into the League of Nations."

The meeting unanimously carried resolutions declaring the League of Nations to be essential to the peace of the world, and pledging those present to support the League of Nations' Union by every means in their power.

NOT ANOTHER HELL.

"Women have learned from the war," said Miss Maude Royden, "not that some things are impossible, but that they are intolerable. (Applause.) It is time for the women of the world to refuse to hear that some things are impossible. The League may be imperfect, but it offers an alternative to war. Not again shall the world be plunged into hell in four days as it was in 1914."

"What man or woman with a heart to feel can look on Central Europe unmoved?" asked Miss Mary Macarthur.

"We have dreamed dreams of the New World—free from war, and based upon justice between man and man. We realise that it will not be built in a day, and that we must go to war again, this time against greed, envy, fear, and hatred, the foes of all mankind.

"All mankind must unite, not some nations against some other nations, for the sake of a fetish called the Balance of Power."

Manchester Guardian 7.2.20

WOMEN AND THE LEAGUE OF NATIONS.

SUPPORT PLEDGED BY GREAT LONDON MEETING.

LONDON, FRIDAY NIGHT.

"They used to tell us that women took no interest in national or international affairs," said Miss Maude Royden, speaking at the Albert Hall to-night, "and look at this." The vast hall was packed from floor to the topmost gallery with women who had come to the women's demonstration in support of the League of Nations. Outside and in the Imperial Institute overflow meetings were held, and altogether 12,000 women testified to their interest in an international affair.

Most of the representative women who had launched this women's campaign were on the platform, and scattered about the hall were groups representing all sections of women's interests. Among them were women from the Arsenal whose allegiance to the League had a special significance; women from various war services, many delegates from the country women's institutes, a party from the Ministry of Labour, women from all the West End drapers and stores whose potential influence in public affairs is beginning to be realised; the Lady Mayoress and the mayoresses of all the London boroughs; and right in front of all the other people from various societies and institutions some blinded soldiers from St. Dunstan's, listening with evident interest and pleasure.

Certain points were made by all the women speakers. They spoke of the present sufferings of the child victims and the agony of the mothers. They emphasised the fact that the success of the League depended ultimately on the individual, as well as the international, goodwill of the peoples—on the spiritual impetus given to its work by minds which had freed themselves of hatred and of greed. "I have known people," said Lady Astor pointedly, "who talked of brotherhood with Germany and who did not like the people next door." "Our purpose," said Mrs. Randall Davidson, who presided, "is not merely that war shall cease, but that righteousness shall prevail between and within the nations."

The Cause of Peace.

Miss Mary Macarthur moved a resolution, afterwards carried unanimously: "That this meeting regards the League of Nations as essential to the peace of the world." She said we needed a new alliance of the best in all the nations against the worst in all the nations, and that was what a League of Nations meant. There had been a time when people extolled the virtue of war, but no one would dare to do that now. The League of Nations demanded the support of the highest enlightened patriotism.

Lady Astor, obviously nervous as she faced such a vast audience, made an appeal for and to America. The United States, she said, was making reservations regarding some articles in the Covenant, but we should not despair. That did not matter provided the United States would make a start, and already in America twenty million people had petitioned the Government to sign the Covenant immediately. She thought that Lord Grey's letter had done more to alter the situation for good than any other single event in the last few months. "Trust America," she said. "I am perfectly sure that she will come into the League of Nations. Here it is easier for us to understand Europe's urgent need. Attempts are being made to sow dissension between this country and America, and I ask America not to be put off by those efforts to divide us."

Miss Maude Royden, speaking to the resolution pledging the meeting to support the League of Nations by every means in its power, addressed herself especially to those in the audience who were dismayed because the League fell so far short of what they had prayed for. It had at least the [illegible]t power of postponing a war until the two nations at enmity had been called on to plead their cause. If we gained this point the world could never again be plunged into hell in four days. It was true that the League had been created in large part by statesmen whom many of them did not greatly trust, and that it was part of a peace which contained grave injustice and mad impossibilities. "But the League exists. It contains the power to revise the treaty. The world is turning towards sanity. Do not let it be your fault if when its sanity returns there is no machine by which it can give its judgment. Do not let the machine be seized and wrested to evil purposes by the enemies of the world. It can be used for the love and pity of the world if you choose. It can be used to alter what is wrong, and it can be perfected, but if you wash your hands of it, do not complain if your enemies use it."

A Great Responsibility.

Lord Robert Cecil said: "The outlook for peace is not less dark than it was last summer. The terrible consequences of war are still in operation. One bright spot in the international horizon has appeared quite recently. In spite of mischief-makers on both sides of the Atlantic the last few days have given us better hopes. This is the anniversary of your enfranchisement. You are no longer voiceless and voteless, you have become full citizens of the Empire with an influence as great as that of your male fellow-citizens. But do not forget that this change has thrown upon you a great responsibility. Surely the cause of peace must appeal to women even more than to men. Be up and doing. The starving children of to-day, the unborn children of future ages, call for your help. Take care lest future generations may say that in the first great call to the enfranchised women they failed to do their duty."

A telegram from the King and Queen, replying to a message from the meeting, said: "Mindful of all that womanhood has sacrificed, endured, and achieved in these years of war, their Majesties feel with you that British idealism can have no more noble aim than to secure to the world enduring peace."

Daily Express. 27.2.20

WOMEN RULERS OF THE WORLD.

HELPERS FOR THE LEAGUE OF NATIONS.

A little gathering in a tiny room at the Caxton Hall yesterday included some of the most prominent women in public, social, and professional life.

It was an historic occasion, because the women had met to discuss the actual names of those who should take a part as members of their sex in the ruling of the world. Nearly a hundred organisations had been invited to nominate representatives for work in connection with the League of Nations, and the names of the women selected afforded an interesting study in varying activities.

A few of the better known include:—

Miss Maude Royden, editor of the "Common Cause," writer of books on feminist subjects, and lately co-pastor of the City Temple.

Dr. Letitia Fairfield, lecturer, editor, and woman medical director of the R.A.F.

Miss Mary Macarthur, the prominent woman Labour leader.

Lady Sykes, a traveller in Eastern countries.

Mrs. Ogilvie Gordon, a champion in the cause of health and better housing.

Professor Caroline Spurgeon, London University.

Marchioness of Aberdeen, a pioneer suffragist.

Mrs. Alfred Lyttelton, playwright and authority on industrial questions.

Dr. Jane Walker, authority on tuberculosis.

Miss Annie Christitch, member of the staff of the "Daily Express" before she returned to Serbia to do invaluable relief work during the war.

Mrs. Snowden, wife of Mr. Philip Snowden.

AMERICA WILL COME IN, SAYS LADY ASTOR.

The Albert Hall, which has seating accommodation for 10,000 persons, was packed from floor to ceiling last night on the occasion of a women's demonstration in support of the League of Nations. Thousands were unable to obtain admission, and two overflow meetings were held, one outside the hall and the second at the Imperial Institute.

Mrs. Randall Davidson presided at the Albert Hall, supported by Princess Helena Victoria, Lord Robert Cecil, the Archbishop of Canterbury, Viscountess Astor, M.P., Viscount and Viscountess Gladstone, Miss Maud Royden, Miss Mary Macarthur, Mrs. W. A. Cadbury (Lady Mayoress of Birmingham), Lady Islington, and others.

Viscountess Astor, seconding a resolution declaring that the League was essential to the peace of the world, urged that we should not be plunged in despair because the United States made reservations regarding some articles in the Covenant. The reservations did not matter so much provided the United States would make a start. "Trust America," added Lady Astor. "I am perfectly certain that America will come into the League of Nations."

The resolution was unanimously carried.

THE WOMEN'S LEAGUE OF NATIONS MEETING.

THE Women's Demonstration at the Albert Hall on February 6th, in support of the League of Nations, was a great success. The demand for tickets had been so keen that arrangements were made for two overflow meetings, and the audience showed an enlightened appreciation of the significance of what they were doing. Mrs. Randall Davidson read a brief speech from the Chair, in which she said that failure would be impossible if "We women of Britain set out on this great adventure founded on the love of God."

The first resolution: "This meeting regards the League of Nations as essential to the peace of the world," was proposed by Miss Mary MacArthur, and seconded by Lady Astor, M.P. Miss MacArthur spoke not at great length, but with vigour and transparent sincerity. Referring to posters she had seen on the walls as she came to the meeting, "Swank and Uncle Sam," "America's Insult to our Dead," "Is Germany Beaten?"—she passionately demanded whether a question more pertinent than "Is Germany Beaten?" would not be "Have the ideals for which we fought been victorious?" Developing this thought, she continued that a new world is impossible without a new spirit, and that a new spirit means a new conquest and a new alliance. A conquest over greed and hate, an alliance, not of some nations against others, but of the best in all nations against the worst in each; for hate is twice cursed, it curses him who hates and him who is hated.

Miss Maude Royden proposed the resolution pledging the meeting to support the League of Nations Union. Her question "What happens when an irresistible force meets an immovable object?" provoked laughter, which was renewed when she answered, "I do not know"; then she added, "But I *shall* know, for the irresistible force of women's determination must remove the immovable object called the necessity of war." All she claimed for the League was that by it the nations, when things became intolerable for them, might be offered an alternative to war. The supremely significant part of Miss Royden's speech was her direct and moving challenge to those of her friends who, because they are disappointed that the League is yet so imperfect—"created by statesmen we do not greatly trust"—hold aloof. "I also," she exclaimed, "I also have dreamed dreams of a League which is not this League. These dreams were all I had to sustain me in the war. I too know disappointment, but I say to those who, for such reasons, hold aloof, they incur a terrible responsibility. With the spring of the year comes again the spring of pity and of humanity—Bradford, to its immortal honour, takes a thousand of the ex-enemy children—sanity will come again to the world, and if, when it comes, it finds the channel blocked along which the flood of humanity can flow, yours will be the responsibility. If you do not like the League, change it. Revise the Treaty. But do not for want of a little faith in yourselves and in human nature bring this counsel of despair that the thing shall be dead before it is born, for if you do the world will not easily hope again, it will not easily dream again. Teach it to despair, and the hope of peace is already dead."

Lord Robert Cecil showed his respect for his audience of women by giving of his best political thought, and unfolding in considerable detail his scheme for building up, through the League of Nations Union, a stable yet dynamic force of public opinion, by which the League shall become the real instrument of the peoples rather than of the diplomats. He burked nothing of the difficulties, but above it all rose the indomitable spirit of leadership. "Would it not be a great thing to read of the British representative coming down to the Council of the League (which he declared ought to be summoned at once) and making a great speech, not to his own countrymen only, but to all the world, calling their attention to the vast questions that await settlement, and urging them to abandon sectional and national prejudices. . . . He would point to the starving peoples of Europe, the passions of hatred that afflict us and all the other legacies of war, and he would ask the assembled statesmen to put aside their desires for vengeance or for reparation, territorial aggrandisement or commercial advantage, and treating themselves as members of a great world assembly, to work for the re-establishment of the prosperity of mankind." His closing words may become historic: "You can no longer stand aside even if you wish to. . . . Be up and doing. The starving children of to-day, the unborn children of future ages call for your help. Take care lest future generations may say that in the first great call to the enfranchised women they failed to do their duty."

A. HELEN WARD.
